## PREFACE

---

THIS Gazetteer has been prepared on the plan prescribed by Government according to which statistics have been relegated as far as possible to a separate Appendix which is to be revised decennially. The original 'District Manual' was written by Mr H Morris of the Madras Civil Service in 1878

I have gratefully to return thanks for help from many quarters. The account of the early history has been almost entirely based on information supplied by Rai Bahadur V Venkayya, MA, the Government Epigraphist, whose kindness in reading and correcting my drafts and answering my questions I cannot too warmly acknowledge. The District officials have all given me their ready and cordial assistance, and so have many non official residents of the district. I wish particularly to express my obligations to the Revs J H Harper, J Cain and A Gangloff, to Messrs E B Elwin, ICS, H Laflamme, C Mildred, G F F Foulkes, M G K Waite, J F Marshall, M Woodhouse, W J M Inkster, L D Buchanan, H J Allen, F Armitage, A C Pranatartihara Aiyar, R Venkata Rao and V Parthasaradhi Chetti and to Capt M N Chaudhuri, I M S. All these gentlemen have helped me with the records at their disposal or with their personal experience, and they have supplied a large portion of the material found in this Gazetteer. I have also to thank Mr J A Cumming, ICS, for reading through the proofs and for many valuable suggestions.

# GÓDÁVARI DISTRICT.

## CHAPTER I

### PHYSICAL DESCRIPTION

GENERAL DESCRIPTION—Chief towns—Etymology of the name—Natural divisions HILLS—The Gháts RIVERS—The Gódávári—Its sanctity—Its islands and encroachments—The season of its floods—Its tributaries—The Yelérú SOILS GEOLOGY—Physical changes now in progress MINERALS—Coal—The Gauridévpéta field—Bedadanúru—Gold—Iron—Graphite—Mica—Building stone—Rock-crystals garnets, sapphires. CLIMATE—Rainfall—Temperature—Wind and weather FLORA FAUNA—Cattle—Buffaloes—Sheep and goats—Cattle breeding—Feeding methods—Cattle diseases—Cattle fairs—Game—Fish—Native sportsmen

THE Gódávári district lies on the north-east coast of the Madras Presidency. It has an area of 5,634 square miles and extends from 16° 20' to 18° 4' N and from 80° 52' to 82° 36' E. It is bounded on the north-east by Vizagapatam, on the north by the same district and the Bastar State of the Central Provinces, and on the west and south-west by the Gódávári river, which separates it from the Nizam's Dominions and Kistna. The district, however, extends across this river at one point to include the Pólavaram division. Gódávári is roughly triangular in shape, its base being formed by the line of the coast from the western mouth of the Gódávári river to the Vizagapatam border, one side by the Gódávári river itself, and the other by the irregular frontier of Vizagapatam and the Central Provinces.

The district is made up of ten taluks and two deputy tahsildars' divisions, namely, the taluks of Nagaram,<sup>1</sup> Amalápuram, Rámachandrapuram and Cocanada, which make up the fertile delta of the Gódávári river, the upland taluks of

<sup>1</sup> Nagaram taluk is also commonly known as the *Títupáka síma* ('country') from the village of that name within it, and Amalápuram taluk as the *Kóna síma* ('the end country').

Rajahmundry and Peddápúram,<sup>1</sup> the hilly divisions of Yellavaram, Chódavaram and Pólavaram, the taluk of Bhadráchalam beyond the Eastern Gháts, and the two zamindari deputy tahsildars' divisions of Pithápúram and Tuni in the north-eastern corner of the district, the former of which resembles in character the upland taluks and the latter the three hilly divisions. Statistical particulars of each of these areas will be found in the separate Appendix to this volume, and some account of each and of its chief towns and villages is given in Chapter XV below. Yellavaram, Chódavaram, Pólavaram and Bhadráchalam are tracts covered with hill and jungle and inhabited by uncivilized tribes to whom it is inexpedient to apply the whole of the ordinary law of the land. Under the Scheduled Districts Act of 1874, these have been formed (see p. 190) into an Agency in which civil justice is administered under special rules and the Collector has special powers in his capacity of 'Government Agent'. They are consequently always known as 'the Agency' or 'the Agency tracts'.

The capital of the district is the busy seaport and municipality of Cocanada, and with the exception of Nagaram taluk and Yellavaram division, the head-quarters of the various taluks and divisions are the towns or villages from which they are named. The head-quarters of Nagaram taluk is Rájavólu (Rázóle), and of Yellavaram, Addatígela. Besides the tahsildars' stations, both Samalkot in the Cocanada taluk and Dowlaishweram near Rajahmundry are towns of importance and interest.

Many places in the delta, such as Coringa, Georgepet, Nilapalli, and Injaram in the Cocanada taluk and Bendamurlanka in Amalápúram, were notable ports or settlements of the East India Company at the beginning of the nineteenth century. All these have now sunk into insignificance. The little village of Chandurti in the Pithápúram division has given its name, under the distorted form of Condore,<sup>2</sup> to the decisive battle by which the sovereignty of the whole of the Northern Circars was wrested by the British from the French. Yanam in the Cocanada taluk is one of the few French settlements in India.

Gódávári takes its name from the great river which forms its western boundary and the delta of which is its richest and most fertile portion. Ráj Bahádúr V Venkayya, M.A., the

<sup>1</sup> The parts of Cocanada and Peddápúram taluks and of the Pithápúram division which are watered by the Yelérá river are often spoken of as Porulanádu. Cf. Chapter XV, p. 221.

<sup>2</sup> See below Chapter II, p. 31 and Chapter XV, p. 227.

Government Epigraphist, considers that the word means literally either 'streams giving water' (sometimes in old writings abbreviated to Gódá or 'giving water') or 'streams giving kine' Another Sanskrit authority<sup>1</sup> interprets the word in a somewhat similar way as meaning 'the best (*vari*) [of those that] give water', and adds the alternative 'the chief [of those that] give heaven' with reference to the sanctifying power of the river The local and popular etymology of the name says that it means 'the expiation for killing a cow,' and a well-known story relates how the rishi Gautama brought the Gódávāri to the district to expiate the sin of having killed a cow in a moment of anger Kovvur in Yernagudem taluk, Kistna district, the name of which is said to mean 'the village of the cow,' is pointed out as the place where the cow was slain and the water was first made to flow

The district consists of four very dissimilar natural divisions, namely (beginning in the north-west), the undulating taluk of Bhadráchalam above the Eastern Gháts, the hilly agency divisions which really form a part of that range, the upland taluks which divide the agency hills from the low lands of the delta, and the delta of the Gódávāri itself

The delta presents a vast expanse of rice fields dotted with gardens of plantains, betel and cocoanut and with innumerable palmyras, the uplands form a gently undulating and fairly wooded plain, the Agency consists of broken, forest-clad hills, and the Bhadráchalam taluk above the gháts resembles the uplands except that its undulations are sharper and its woods much more dense It is broken up by the clusters of the Bodugudem and Rekapalle hills, which are not unlike the gháts themselves

The only hills in the district are the Eastern Gháts, which rise by gentle gradations from the level of the coast The scenery of these mountains, particularly in the neighbourhood of the Gódávāri river, is exceedingly picturesque Their sides are clothed with luxuriant forests, interspersed with bamboo and a thick undergrowth of forest shrubs Their highest point is Dumkonda, 4,478 feet, and another prominent peak stands to the south of the fine gorge through which the Gódávāri passes them, and is called Párikonda or Bison Hill A hill in the range which runs from that peak across the river into the Pólavaram division is locally known as Bírāya Konda, and is regarded as the haunt of a demon called Bírāya who is worshipped by the native navigators of the Gódávāri<sup>2</sup>

<sup>1</sup> The *Saddakaipadruma* by Sir Rájah Rádha Kántha Déva (Calcutta, 1886)

<sup>2</sup> See below p. 5

Among the great rivers of India the Gódávarī takes rank next after the Ganges and Indus. It runs nearly across the peninsula, its course is 900 miles long, and it receives the drainage from 115,000 square miles, an area greater than that of England and Scotland combined. Its maximum discharge is calculated to be one and a half million cubic feet per second, more than 200 times that of the Thames at Staines and about three times that of the Nile at Cairo.<sup>1</sup>

It rises at Trimbak, a village about seventy miles north-east of Bombay and only fifty miles from the Arabian Sea. The place traditionally regarded as the source of the river is a reservoir on a hill behind the village. This is approached by a flight of 690 stone steps, and the water trickles into it drop by drop from the lips of a carven image, shrouded by a canopy of stone.<sup>2</sup> From thence the river flows in a south-easterly direction until, after it has completed a course of 650 miles, it receives from the north at Siróncha the waters of the Wardha, the Painganga and the Wainganga united in the single noble stream of the Pránhita. From this point the river has some 200 miles to run to the Bay of Bengal. It is soon joined by the Indrávati, also from the north, and before long skirts the Bhadrachalam taluk of this district. A few miles below the Bhadrachalam border is the Dummagudem anicut, almost the sole relic of the great scheme conceived by Sir Arthur Cotton (see p 80) for the navigation of the upper waters of the river. Next the beautiful Saverī (or Sabarī) flows in from the north, skirting the edge of the forest-clad Rékapalle hills. From there the Eastern Gháts come into view, some 2,500 feet in average height, bounding the whole horizon and towering above the lesser and detached hills that flank the river.

The Gódávarī has by this time assumed imposing proportions, being generally a mile, and sometimes two and a half miles, broad. After its junction with the Saverī, however, its bed is suddenly contracted by spurs of the gháts till at length it forces a passage between them, penetrating by an almost precipitous gorge to the very heart of the range. The scenery of this gorge is famous for its beauty. The steep wooded slopes of the mountains which overhang it approach at one place to within 200 yards of each other, and they constantly recede and advance and form a succession of beautiful little lakes from which there is apparently no outlet. Here and there a faint line of smoke indicates the

<sup>1</sup> *The Engineering Works of the Gódávarī Delta*, by Mr G T Walch (Madras, 1896), p 1

<sup>2</sup> *Hunter's Imperial Gazetteer*

existence of a Kóya or Reddi village, but the hills are very sparsely inhabited.

In flood time the water flows with terrific force 'Through the gorge,' writes Dr King, 'the pent-up waters tear their way with, I have been told, a surface so strangely concave on the cross section that adventurous boatmen glide along the bottom of a trough whose sides rise up to a good height and hide away the immediate banks, and out of this gorge away towards the open country of the Gódávárí district the river has such a fall that the sensation produced on the mind of the traveller is said to be that of sliding down an inclined plane.'<sup>1</sup> Native boatmen are much afraid of navigating the river at such times, and none of them, of whatever creed, omit to break a number of cocoanuts at the mouth of the gorge to appease the dangerous demon Biraiya already mentioned, who will dash on a rock or drown in a whirlpool the navigator who omits this homage. So great is the action of the stream during floods that the rocky bed has been scoured out to depths popularly supposed to be unfathomable, but which really vary normally from 100 to nearly 200 feet. High floods rise quite 50 feet above the normal level, so that the gorge then encloses a torrent of waters from 150 to 250 feet in depth.<sup>2</sup>

After passing this point and entering the open country, the river widens out and flows by the old zamindari strongholds of Pólavaram and Gutála and the picturesque and sacred islands of Mahánandisvaram and Pattisam.<sup>3</sup> At Rajahmundry it is nearly two miles wide, and some five miles further down, at Dowlaisweram, at the head of the delta, it is crossed by the celebrated anicut which renders its waters at last available for irrigation. At this point the river is nearly four miles broad, though about a third of this width is taken up by three islands, and the spot is more fully described in Chapter IV. At Dowlaisweram the Gódávárí divides into two main streams--the eastern or Gautamí Gódávárí flowing past Injaram, the little French settlement of Yanam, and Nílápalli, and entering the sea near Point Gódávárí, and the western or Vasishta Gódávárí flowing nearly due south and entering the sea at Point Narasapur. A few miles above this latter mouth another large branch, the Vainatáyam, breaks off to the east of the Vasishta Gódávárí (forming the island of Nagaram between itself and the latter river) and reaches the

<sup>1</sup> *Memoirs*, Geol. Surv., India, xvii, pt 3, 5.

<sup>2</sup> Mr G. T. Welch in *The Engineering Works of the Gódávárí Delta* (Madras, 1896), p. 1.

<sup>3</sup> See Chapter XV, p. 279.

sea near Bendamūrīlanka. The three factories of the old East India Company at Injaram, Bendamūrīlanka and Madapollam were situated near these three principal mouths of the Gódávārī. Part of Madapollam village has been swept away by the river.

Seven traditional mouths are recognized as sacred by Hindus. The holy waters of the Gódávārī are said to have been brought from the head of Siva<sup>1</sup> by the saint Gautama, and the seven branches by which it is traditionally supposed to have reached the sea are said to have been made by seven great *rishis*. The mouths of these are considered especially holy, and to bathe in the sea at any one of them is considered an act of great religious efficacy. It is customary for the pious (especially childless persons desirous of offspring) to make a pilgrimage to each in turn and bathe there, thus performing the *sapta-ságara-yátrá* or 'pilgrimage of the seven confluences'. The Vainatéyam is not one of these traditional mouths, but is supposed to have been created afterwards by a *rishi* of that name who stole a part of the Vasishta for the purpose.<sup>2</sup> The traditional seven are the Kasyapa or Tulya (the Tulya Bhága drain), the Atri (the Coringa river), the Gautami, the Bháradvája, the Visvámitra or Kausika, the Jamadagni and the Vasishta. The Bháradvája, Visvámitra and Jamadagni no longer exist, but pilgrims bathe in the sea at the spots where they are supposed to have been.<sup>3</sup> Several other sacred bathing-places in the delta are noticed in Chapter XV. The most important of them is Kótīpalli in the Rámachandrapuram taluk. But a bath in the river anywhere along its course has great sanctifying virtue. Every thirteenth year this virtue is supposed to be much increased, and the *pushkaram* festival which then takes place is performed all along the stream in recognition of the fact.

Several islands of a permanent character stand in various parts of the Gódávārī, but the river constantly forms new temporary islands and modifies old ones. Islands liable to these changes are called *lankas*. They are rendered extraordinarily fertile by the silt deposited upon them by the river, and the rich tobacco grown on them is known as *lanka* tobacco. Other physical changes are produced by the force of the stream. Its encroachments upon the banks are noticeable in

<sup>1</sup> Another account says they were brought from the Ganges. The Gódávārī is frequently spoken of by the name of the Ganges in ancient writings.

<sup>2</sup> See Chapter XV, p. 202.

<sup>3</sup> The traditional Bháradvája mouth is located at Tirtālamondi, a hamlet of Gutunádévi, and the Kausika mouth in Rámésaram, a hamlet of Sémantakurra both in the Amalāpuram taluk.

more than one place. At Tállapúdi above Rajahmundry it presses hard against the right bank, which is in many places cut down precipitously by the action of the stream, and Tállapúdi and other villages, which used to be some distance from the river, now stand on its bank. In 1679 the encroachments of the river at Narasapur on the Vasishta Gódávari forced many of the English merchants to leave their houses<sup>1</sup>

The greater portion of the area drained by the Gódávari receives more rain in the south-west than in the north-east monsoon, and it is during the former, therefore, that the river brings down most water. It begins to rise at Dowlaishweram some ten days after the south-west rains set in at Bombay—usually about the middle of June—and it is almost always high till October. The season for floods is then over, but during the next two months or so occasional freshes are caused by the north-east monsoon rains. When these have ceased the river gets lower and lower, till about the middle of May (its lowest stage) its discharge is at times as little as 1,500 cubic feet per second.

The navigation on the river and on the delta canals is referred to in Chapter VII.

Two tributaries of the Gódávari flow through this district. The Saveri rises in the hills in the Vizagapatam Agency, and afterwards runs in a south-westerly course, forming for some distance the boundary between that tract and the Bastar State. It receives several tributaries on the way, and, at the point where Bastar, Vizagapatam and Gódávari meet, is joined by the Siléru river from the hills of Jeypore. The latter forms for many miles the boundary between the Rampa country of this district and the Jeypore zamindari. The united waters of these two rivers are much used for floating timber from the Rēkapalle hills, which are enclosed between the Saveri and the Gódávari.

One or two insignificant streams run down from the north into the Gódávari, and from the Tunī hills into the sea, but the only other noteworthy river in the district is the Yeléru. This is formed by the union of three streams which take their rise in the hills of Rampa, Golconda and Jaddangi respectively and unite a little to the north-east of Yellavaram. It flows through Peddápúram taluk to a point a little above Víravaram, where it again separates into several streams. The westernmost of these continues its course, still under the name of the parent stream, along the boundary of Prthápúram division into Cocanada taluk, passes under the Samalkot canal, which

<sup>1</sup> Journal of the tour of the Agent of Fort St. George to Madapollam in 1679

crosses it by an aqueduct near that town, and finally drops into the Bikkavólu drain and the Cocanada tidal creek, and so into the Cocanada bay. Meanwhile the two other branches have both flowed into the Pithápuram division, where, united again under the name of the Górikanadi, they distribute their waters to numerous works of irrigation, and finally reach the sea near Uppáda.

The following table gives the classification of the soils in the Government land in the district excluding the taluk of Bhadráchalam, which has not yet been settled by the Madras Government —

Taluk or division	Total area (in sq miles)	Area classified (in sq miles)	Percentage of area classified which is				
			Alluvial	Perma- nently improved	Black regar	Red ferru- ginous	Arma- ceous.
<i>Plains</i>							
Amalápuram	506	235	86 78				13 22
Cocanada	294	84	86 45		5 93	7 41	0 21
Nagaram	137	120	60 64				39 36
Peddapuram	504	203	6 19	0 21	11 53	82 07	
Rajahmundry	350	230	0 20	0 23	28 36	71 21	
Rámachandrapuram	296	194	91 08	0 02	0 22	8 68	
Total Plains	2 087	1,066	50 56	0 09	8 82	33 17	7 36
<i>Agency (excluding Bhadrá- chalam)</i>							
Chódavaram	715	2				100 00	
Pólavaram	564	67			0 19	99 81	
Yellavaram	950	25			4 33	95 67	
Total, Agency	2 229	94			1 26	98 74	
Grand total	4,316	1,160	46 48	0 09	8 21	38 46	6 76

It will be seen that the delta taluks are mainly covered with alluvial soil, though there are sandy areas along their coasts, while the uplands are chiefly made up of red ferruginous earths varied by small areas of the black regar.

The ultimate foundation of the country above the gháts,<sup>1</sup> as of most of peninsular India, is gneiss. Various other kinds of rock of less but varying antiquity have been superimposed upon different parts of the district. The gneiss is usually

<sup>1</sup> The geological formation of the country above the gháts is described in some detail by Dr W King in the *Memoirs* of the Geological Survey of India, xvii, pt. 3, and that of the area below the hills in *Memoirs*, xvi, pt. 3.

uppermost throughout Bhadráçalam, Chódavaram and the eastern portion of Pólavaram, and, in the form of what is called *Bezváda* gneiss, throughout Yellavaram and much of Tuní as well as in the north of Rajahmundry and Peddápuraṁ taluks

After the gneiss, the next most ancient formation is three groups of the Lower Gondwána rocks. The Tálchir group is found in very small and scattered tracts in the Nizám's Dominions and also near Dummagudem, between Dummagúdem and Bhadráçalam, and between Bhadráçalam and Rékapaile, the Kámthi group stretches all along the river on the Hyderabad side, but only reaches into this district at the south-western corner<sup>1</sup> of the Pólavaram division, and the Barákar group occurs in small and scattered areas in two places in the district, namely Bedadanúru in the south-west corner of Pólavaram, and Gauridévipéta sixteen miles down the river from Bhadráçalam. This group is of particular interest, because coal is found in it<sup>1</sup>

Among still more recent geological formations, a few small outcrops of the older Tirupati sandstones occur between the gneiss and the alluvium of Peddápuraṁ and Tuní. A broad belt of the Cuddalore sandstone also stretches, like an island in the middle of the alluvium, from Rajahmundry to Samalkot with a narrow strip of Deccan trap and some isolated patches of gneiss on its north-western edge. The whole of the rest of the district is formed of fluvatile alluvium. This occupies nearly the whole of the delta, and above the gháts stretches in some places a long way from the river on either side.

At some remote period the great plain which is now covered with alluvial soils must have been occupied by the sea, the sandstone 'island' between Rajahmundry and Samalkot must have been an island in fact, and the salt water must have stretched to the edge of the northern hills. This plain was gradually raised above tidal level by the deltaic deposits of the Gódavari and the minor streams in the north-east of the district, and the process still continues. It is particularly noticeable in the constant extension of the shore round Point Gódavari and the gradual silting up of Coringa bay. In Pliny's time the village of Coringa, now miles inland, stood apparently upon a cape, and even within the memory of man great changes have taken place. The map of 1842 had to be much modified in 1891 and already needs further alteration. A spit of land is extending to the north from the old Point Gódavari at an estimated rate of one

<sup>1</sup> See below p. 10.

mile in 20 years and is gradually enclosing the Coringa bay; and the anchorage in the bay is said to be shallowing at the rate of a foot every ten years. But a compensating process of erosion is taking place elsewhere. At Uppáda on the Pithápuram coast the land has been much encroached upon by the sea. Since 1900 over fifty yards have been swept away and the process must have been going on for many years. A ruin about half a mile out at sea still catches the fishermen's nets, and children hunt the beach at spring tides for coins which are occasionally washed up from what must be a submerged town.

As above remarked, there are two places in the district where the coal-bearing Barákar strata are found, viz, near Bedadanuru in Pólavaram division, and at Gauridévipéta in the Bhadráchalam taluk.

The Gauridévipéta field was first reported on in 1871 by Mr W T Blanford, who summarized the position as follows.<sup>1</sup> 'Just below Bhadráchalam the Gódávári traverses a small field of Barákar rocks about seven miles across from east to west and five miles, where broadest, from north to south. The whole area is about 24 square miles, the greater portion of which lies on the right bank of the river in the Nizam's territory. The portion of this field on the north (left) bank of the river has been thoroughly explored by boring and some coal has been found, but the quality is altogether inferior and the quantity small, the seams being thin and much mixed with shale.' An attempt to work this field was made by the Gódávári Coal Company, Limited, in 1891. The operations were not successful, as coal was not found in paying quantities, and soon after the commencement of the work a fault was encountered which made it impossible to recover the seam. The seam, moreover, was of poor quality and contained a quantity of shale.<sup>2</sup> It is thought possible that better and more plentiful supplies might be found on the southern bank of the river.

The Bedadanuru field<sup>3</sup> is the most southerly outcrop of Barákar rocks known in the Madras Presidency. It was once hoped that good coal would be found there, and extensive borings were undertaken under the superintendence of the Executive Engineer at Dummagúdem in 1874, but these resulted only in the discovery of some thin seams of very poor coaly shales, and the exploration was abandoned. The field

<sup>1</sup> *Records*, Geol. Surv., India, iv, 59 fol.

<sup>2</sup> Information kindly supplied by Messrs. Binny & Co., Madras, the agents of the Company.

See *Memoirs*, Geol. Surv., India, xviii, pt. 3, 29, 45.

is about five and a quarter square miles in extent and is situated near the head waters of a large feeder of the Yerra Kálwa with the small village of Bedadanúru in its midst. Further prospecting was undertaken about six years ago. Some eight square miles near the village were thoroughly explored by borings, but the only discovery was a one-inch seam.

The existence of gold in the bed of the Gódávárí is mentioned in several works published about the beginning of the last century. The *Gazetteer* of the Central Provinces<sup>1</sup> says that the metal used to be washed at the point where the Kínarsánu river falls into the Gódávárí just below Bhadráchalām. Local enquiries at Bhadráchalām vaguely substantiate the former existence of the industry there.

Iron is smelted from scattered ore in several villages in the Bhadráchalām taluk.

Graphite or plumbago is distributed in small quantities among the gneissic rocks in the north-west of the district, notably near Velagapalli and Yerrametla in the Chódavaram division and at Gullapúdi in Pólavaram. The South Indian Export Company has been prospecting recently at the last-named place. The Gódávárí Coal Company possesses a graphite mine at Pedakonda in Bhadráchalām taluk, and has prospected for the mineral in several parts of the surrounding country. Outcrops are said to be plentiful and the samples obtained to be of fair quality but not so good as those from Ceylon. A good average quality fetches from £13 to £15 per ton in the London market at present.<sup>2</sup>

Mica is said to exist in parts of the Agency and is being prospected for near Pólavaram by the South Indian Export Company.

Good building stone is obtained from the different sandstone and trap groups in the alluvial plains of the Gódávárí. A locality particularly mentioned by Dr King is Peddápúram. A little cutstone is also obtained in the Chódavaram division.

Very pure rock-crystal, inferior garnets and some sapphires occur in the neighbourhood of Bhadráchalām. The crystals are kept as curiosities or used in native medicines. The garnets are said to be found in the beds of the Gódávárí and Kínarsánu rivers, especially near Gaundévipéta.

Detailed statistics of the rainfall in Gódávárí are given in Chapter VIII below. The average annual fall for the district is 40·26 inches.

<sup>1</sup> Nagpur, 1870, 506.

The year	89.4	74.9	82.1

meteorological observations (other than the registration of rainfall) are made is Cocanada. There a daily record of the temperature is kept, and the results are telegraphed to the Meteorological Reporter at Madras. The marginal statement gives the average maxima and minima and the mean for each month in degrees Fahrenheit deduced from the figures of a series of years. It will be seen that the weather is very hot from April to June and that the mean temperature does

not fall below 80 degrees till after October. The climate in December and January is cool, the average maximum temperature not exceeding 81 degrees and the average minimum being as low as 65. Along the coast the effect of the heat is much enhanced by the dampness of the air. The hill tracts and the country above the gháts are both cooler and drier than Cocanada.

Light north-easterly breezes in January and February, the driest months of the year, are followed in March and April by light south and south-east winds which blow during the day but die down at sunset. This south breeze is called by the natives *payiru gdu*, or the 'crop wind'. By May the wind, which is still light, has veered round to the south-west, but north-westerly squalls frequently occur, generally in the early part of the night, and sometimes blow with great violence. The south-west monsoon arrives in June and continues for some three months. In September and October land and sea breezes alternate, and the weather becomes calm and sultry as the north-east monsoon approaches. The latter sets in with light or moderate currents of air about the beginning of November, and brings bright and cool weather with it. Cyclones (see Chapter VIII) are apt to occur in this month. In December the wind blows from the east during the day and from the north during the night. The latter is called the hill (*konda*) wind.

The botany of Godávari is interesting from several points of view. The physical geography of the district permits the

existence of several distinct floras, while the residence of the great Indian botanist, Roxburgh, at Samalkot has caused the native plants to be more carefully studied than elsewhere. The irrigated delta teems with weeds of cultivation, the uplands yield the plants of the dry scrub forest, while the hill tracts of Rampa present an entirely different series. The latter are most easily studied where the Gódavari pierces the back bone of the Eastern Gháts, and the deep ravines near Bison Hill afford the nearest approach to a moist evergreen forest to be met with in this part of India. Among the interesting plants of the Gódavari gorges may be noted the beautiful blue *Barleria strigosa*, *Oidenlandia nudicaulis*, *Sauropus quadrangularis*, *Bauhinia Vahlii*, *Euphorbia elegans* and *Payllanthus suberosus*. Bordering the stream and in the rapids *Euphorbia Lawii* appears to be at home, while on the banks such exotic ferns as *Luffa echinata* and *Melilotus parviflora* may be found. Many Gódavari plants are illustrated and described in the magnificent *Coromandel Plants* prepared by Roxburgh while he was Carnatic Botanist to the Hon. East India Company.<sup>1</sup>

Five kinds of cattle are locally recognized, viz., the *désaváli* (or country), the *paramati* (western), the *turpu* (eastern), the Kóya and the Sugáli. The *désaváli* are found both in the plains and in the Agency, in the latter they are called also *gommu* (riverside) cattle and are generally stronger than in the plains. The western cattle are easily recognized by their peculiar and plentiful branding and by the shortness of their horns. They are not found in the Agency and are imported in small numbers from Nellore and Guntúr. The cows give better milk than the country animals. The eastern cattle come from Vizagapatam, but are apparently merely animals bought as calves from Guntur and Nellore and reared in that district. The Kóya cattle are inferior animals raised by the hill tribe of that name. The Sugáli breed are brought by Sugális (Lambádís) of the Nizam's Dominions to this district and are especially common in the Rajahmundry and Rámachandrapuram taluks. These Sugális are wandering traders and use the cattle to transport forest produce from the upper reaches of the river and to carry grain for the ryots.

Four kinds of buffaloes occur in the district. In the plains 'country buffaloes' and 'eastern buffaloes' from Vizagapatam district are the usual breeds. They are much alike in appearance. A larger kind, called the Bobbili or *Gavvada* buffalo, is less common. In Bhadráchalam a fine animal

<sup>1</sup> This paragraph was written by Mr. C. A. Barber (the Government Botanist) for the *Imperial Gazetteer*.

called the northern (*uttarddi*) buffalo is used. It generally has white patches on the forehead and just above the hoofs.

There are three kinds of sheep, namely, the country sheep, which give milk, manure and meat, but bear no wool, the *kulam* sheep, which are valued for their wool but are rare, and the *síma* (foreign) sheep, which have long tails, give no wool, and seem only to occur in Tun:

Of goats the 'large' or 'country' kind and the 'small' or '*Kdachi*' breed are distinguished. The latter are also called the 'Calcutta' breed. They yield richer and more wholesome milk and are more prolific than the former. Some care is taken about the breeding of both sheep and goats. Most of the males are sold for meat, and only one or two superior animals are kept for breeding purposes.

Two local practices are of considerable importance to the improvement of the cattle. In almost every village a really good bull or two is set free to roam among the herds, and in the Agency the owners of cattle often set apart a superior animal, called the *vittanam* (seed) bull, to be used exclusively for crossing purposes. In many parts of the district, also, people castrate the inferior bulls.

Cattle are usually fed on paddy straw in the plains and cholam straw in the Agency. In the central delta and in Rajahmundry taluk they are also given sunn hemp (*sanumu*), which is much grown there. In Amalápuram, where grazing is especially scarce, they are fed on rice husk, horse-gram and gingelly oil-cake. When the crops are on the ground and there is no particular work for the cattle, i.e., from August to December, they are sent from the plains to graze in the forests in the Yellavaram and Chódavaram hills. The Pithápuram ryots drive theirs to Tun. The Amalápuram and Nagaram ryots do not as a rule send their animals away owing to the trouble of getting them across the rivers. The Bhadrachalam ryots drive theirs in the hot weather to Bastar and the Jeypore zamindari, where the grazing is better. The Pólavaram forests are resorted to by the cattle of the Kistna district.

Cattle mortality is said to be heavy in the delta (especially in the central delta and Rámachandrapuram), where fodder is scarce, the animals are crowded and the ground is saturated with moisture. 'They suffer from the absence of grazing and deficient food at one time and from feeding on rank, quickly-grown herbage at others.'<sup>1</sup>

<sup>1</sup> Mr Benson in G O No 28, Revenue, dated 17th January 1884, p. 15. See also p. 13 of the same G O.

The chief diseases in the district are foot and mouth disease (*gōllu*), anthrax (*domma*), rinderpest (*peddajādyam*), fever (*kurama*) and *sugalurōgam* or malignant sore throat. Eruptions all over the body, an occasional symptom of rinderpest, are called by the natives *kinka*. Cattle are said to be not infrequently poisoned by *Mādigas*, who then eat their flesh and take their hides.

Generally speaking, the cattle are bought by merchants and ryots at the large weekly fairs at Tummapāla (in Vizagapatam district), Pithāpuram, Drākshārāmam (in Rāmachandrapuram), Ambājipēta (in Amalāpuram) and Palokollu in the Kistna district. Merchants go the round of these markets with their herds until they are all sold. The Pithāpuram and Drākshārāmam cattle fairs are famous. Sometimes drovers take their cattle round the country and sell them to the ryots in their own villages. This is what is usually done by the *Sugālis*, who seem never to frequent the markets.

Big game is plentiful in the hills of the Agency and less so in the uplands of Tum and Peddapuram. Tigers and panthers are numerous, bears are fairly common, bison (*gaur*) occur, nilgai have been shot in the Bhadrāchalam taluk, sambur, spotted deer, jungle sheep, black-buck and pig are all common. Dholes (wild dogs) are found in Bhadrāchalam and Pōlavaram. Small game exists in great abundance. Good snipe-shooting is to be had in the neighbourhood of Rajahmundry and in many other spots. Wild geese, duck and teal are common on the river and its lanks, and the two latter swarm on many jhils and tanks and on the sea at the mouth of the creeks between Cocanada and Coringa, whence they fly inland to feed at night. Partridge, peafowl, jungle-fowl and the smaller quail are all fairly common. The larger quail, florican and sand-grouse are more rarely met with. Other uncommon birds found in the district are the imperial pigeon, pied mina, and *bhīmarāj*. Hares and partridges are captured in quantities by native shikāris, the former with nets, the latter with the help of decoy birds. Crocodiles are found in the upper Gōdāvari in large numbers and people are afraid to enter the deep parts of the river even as far down as Rajahmundry.

Mahseer occur in the Gōdāvari, Saveri and Pannilēru rivers. The large sable fish (*clupea palasah* or hilsa) are netted in very large quantities near the Dowlaishweram anicut, when they come up the river to spawn. Fine carp and labeo are caught near Pōlavaram and in the tanks, as the villagers will not allow the drinking-water tanks to be netted. The fishing in the tidal water near Cocanada and Coringa is

said to be particularly good. A fine fish which the natives call *pundikuppa* and which runs up to 100 lb comes up the creeks. The mango fish and the mullet may also be caught in large quantities near the sea.

Yerukalas are the commonest shikári caste. *Ídigas*, *Kápus*, *Rázus*, Musalmans and *Málas* also shoot. *Nakkalas* hunt jackals and foxes for food. In *Bhadráchalam* and *Pólavaram* the *Kóyas*, *Reddis* and *Mutráchas* are keen sportsmen. Some of the methods employed are interesting, if the accounts given by the natives are to be credited. Jackals and foxes are killed with assegais of split bamboo, antelope are caught by sending out a tame buck with nooses on his horns which entangle the wild ones when they try to eject him, some animals are shot from behind a trained cow which conceals the sportsman and provides a rest for his gun, and spring guns are sometimes placed in the tracks of game. Birds are caught in nooses placed near the cage of a decoy and by limed twigs baited with worms. Waterfowl are driven, by a man concealed behind a trained cow, over a net spread under water.

## CHAPTER II.

### POLITICAL HISTORY

**EARLY HISTORY**—Asôka's conquest, 260 B C—The Andhras, down to 200 A D—The Pallavas, about 200-615 A D—The Châlukyas—Their conquest of Vengi about 615—Separation of the Eastern and Western Châlukyas, about 630—Hiuen Tsiang's description of the former—Eastern Châlukya rule, 630-999—Chôla conquest 999—hulôttunga Chôla I—He obtains the Chôla and Vengi thrones, 1070—His viceroys in Vengi—His death in 1119 and the decline of the Chôlas—The Vêlaṇḍu chieftains twelfth century—The Kôṇa chiefs of the delta—Local chiefs of Ellore, Nâḍendla, etc.—The Kakatiyas of Warangal conquer Kistna about 1200—And Gôdâvarî about 1300—Pratâpa Rudra's viceroys—Temporary Musalman conquest of the district, 1323—The Kôrukonda Reddis 1325-95—The Reddis of Kondavid, 1344-1422—The Rajahmundry Reddis, 1422-50—The Gajapatis of Orissa take the district, 1450—But cede part of it to the Muhammadans, 1470—The latter ousted, 1489—Conquest by Vijayanagar, 1515—Musalman conquest of Kistna 1540—And of Gôdâvarî, 1571 **MUHAMMADAN PERIOD**—Weakness of their rule—Aurangzeb establishes his authority 1687—The Subadar of the Deccan becomes independent 1724—The Northern Circars ceded to the French 1753—Their difficulties there—Bussy at length obtains possession, 1757—Ferde's expedition against the French 1758—His victory at Condore—The country cleared of the French—Cession of the Northern Circars to the English 1765 **ENGLISH PERIOD**—Early administration—Disturbances of the peace—In 1785-90—In 1790-1800—Quieter times thereafter—Subba Reddi's rebellion, 1838—Outbreaks in Rampa.

THE earliest historical mention of the Gôdâvarî district occurs in the inscriptions of Asôka, the Buddhist ruler of the great Mauryan empire, the capital of which was at Pâtahputra, the modern Patna. In 260 B C<sup>1</sup> this monarch conquered the kingdom of Kalinga (a tract of varying extent which may be taken to have comprised the country between the Mahânadî river on the north and the Gôdâvarî on the south) and he claims also to have subdued the Andhras, a dynasty whose sway apparently extended as far north as the Gôdâvarî river. Asôka was the great apostle of the Buddhist religion, which he extended far and wide in India, and the magnificent Buddhist remains at Amarâvatî on the Kistna river are proof that the faith he espoused obtained a strong hold in country even further south than the Gôdâvarî. They contain an inscription in the Mauryan character

But his conquest of the Andhras by no means terminated the existence of that dynasty. For long after his reign they retained, and probably increased, their power in this district. Pliny mentions them as a strong people with 30 fortified cities, 100,000 infantry, 2,000 cavalry and 1,000 elephants. Their conquests extended far to the north, and even to the western coast of the peninsula, for one of their earlier kings, Simuka, covered the walls of a large cave at Nánághát (50 miles north-west of Poona) with inscriptions recording his sacrifices, and his successors have left evidence by their coins and in their inscriptions in the cave temples at Násik, Kárlé and Kánheri that they extended their power to Málwa and the borders of Gujarát. Towards the south their dominions included parts of Mysore. Their capital was at first at Srikákulam on the Kistna, nineteen miles west of Masulipatam, but was afterwards removed to Dharanikóta, near Amarávati. From coins, inscriptions and other material have been ascertained the names and dates of kings of the line who ruled from about 110 to 220 A D.

The next power to appear upon the scene were the Pallavas. This race, like others of the invaders of the south, perhaps passed into central India from the north-west during the second century A D. In an inscription, the Andhra king Gótamputra (172-202 A D) boasts that he defeated them, but they shortly afterwards subdued the Andhras and extended their empire as far south as Conjeeveram and the borders of the Tanjore country, and as far to the north-east as the frontiers of Orissa. Records of them are few and far between, but the absence of inscriptions of the Andhras after about the year 218 and the discovery at Mayidavólu and Kondamudi (in the Guntúr district) of two Pallava records which on palæographical grounds may be assigned to the end of the second century, go to show that their conquest of the Andhras occurred about that period. Moreover inscriptions of two kings named Attivarman and Prithivimula, who were also apparently Pallava rulers, have been found in the Gódavari district and seem to belong to a slightly later period. In the fourth century, the Allahabad inscription mentioned on p 233 refers to a chief of Pithápuram who was apparently a Pallava. Whether these Pallavas were independent monarchs or merely local feudatories of the main Pallava empire, the capital of which was at Conjeeveram, cannot be stated with certainty.

About the beginning of the seventh century, the Chálukyas, who were also invaders from the north-west and who possessed a large empire in central and western India the capital of which was Bádámí in the Bombay Presidency, came into

prominence. An unusually distinct picture of them is drawn by the Chinese pilgrim Hiuen Tsiang, who visited India between the years 629 and 644 A.D.

'This disposition of the people is honest and simple, they are tall of stature and of a stern, vindictive character. To their benefactors they are grateful, to their enemies relentless. If they are insulted, they will risk their lives to avenge themselves. If they are asked to help one in distress, they will forget themselves in their haste to render assistance. If they are going to seek revenge they first give their enemy warning, then, each being armed, they attack each other with spears. When one turns to flee, the other pursues him, but they do not kill a man who submits. If a general loses a battle, they do not inflict punishment, but present him with woman's clothes, and so he is driven to seek death for himself. The country provides for a band of champions to the number of several hundred. When about to engage in conflict they intoxicate themselves with wine, and then one man with lance in hand will meet ten thousand and challenge them to fight. If one of these champions meets a man and kills him, the laws of the country do not punish him. Every time they go forth they beat drums before them. Moreover they make drunk many hundred head of elephants, and, taking them out to fight, and after themselves drinking wine, they rush forward in mass and trample everything down so that no enemy can stand before them. The king in consequence of his possessing these men and elephants treats his neighbours with contempt. He is of the Kshatriya caste and his name is Pulakésin.'<sup>1</sup>

The monarch here referred to (Pulakésin II, 609-42) extended his conquests throughout the Gódvári district and into Vizagapatam, drove the Pallavas to the walls of Conjeevaram and threatened the country of the Chólas of Tanjore.

His conquest of Gódvári is detailed in a stone inscription at Ajhole (in the Bombay Presidency) in which he mentions the reduction of Pithápuram and Ellore.<sup>2</sup> It took place about 615 A.D.

During his absence on this campaign, Pulakésin had made his younger brother Vishnuvardhana I his regent at his capital of Bádámí, and on his return he deputed him to govern the country he had recently conquered. By 632 Vishnuvardhana had established himself in these new territories as an independent sovereign of the kingdom of 'Vengi,' the capital of which was at Pedda Végi near Ellore and which included the Gódvári district, and there he founded the Eastern Chálukya dynasty, which held that country for at least five centuries.

<sup>2</sup> *Bombay Gazetteer* (1896), I, pt. 2, 353.

<sup>1</sup> *Indian Antiquary*, xx, 94.

and remained throughout distinct from, and independent of, the Western Chálukyas

Hsien Tsiang visited this kingdom also. He describes it as being nearly 1,000 miles in circuit and its capital as some seven miles round, but the country was thinly populated—possibly owing to its recent conquest. The once numerous Buddhist convents were in ruins and deserted, for, though the Andhras and Pallavas had been Buddhists or Jains, the Eastern Chálukyas were Vaishnavites by creed.

The genealogy and some of the acts of the Eastern Chálukya kings of Vengi are given with great chronological distinctness in the various grants of the dynasty that have come down to us.<sup>1</sup> In the early part of the eighth century Udayachandra, the general of the Pallava king Nandivarman, claims that he subdued the Eastern Chálukya king Vishnuvardhana III (709-46),<sup>2</sup> but this reconquest by the ancient owners of the country seems to have been short-lived. Vijayaditya II (799-843) had to defend himself against his neighbours on the west, the Ráshtrakutas of Mákhéd (90 miles west by south of Hyderabad), who had subdued and taken the place of the Western Chálukyas. What was the result of the fighting is not clear. Vijayaditya II relates how 'during twelve years by day and by night he fought a hundred and eight battles with the armies of the Gangas (probably the Mysore Gangas) and the Rattas' (*i.e.*, the Ráshtrakutas), but his Ráshtrakuta contemporary, Góvinda III, boasts that he ordered the king of Vengi into his presence and made him assist in building and fortifying a city.

At the end of the tenth century, the mighty Rájaraja I, who had laid the foundations of a great Chóla empire with its capital at Tanjore, conquered the Eastern Chálukya country. He seems to have appointed a prince of the fallen line (Saktivarman, 999-1011) as king (or perhaps feudatory) in Vengi.<sup>3</sup> This man's brother and successor, Vimaladitya (1011-22),<sup>4</sup> though he had married a Chóla princess, apparently attempted to throw off his allegiance, for Rájaraja's son Rájendra Chóla (1011-14) again invaded the Vengi country and advanced as far as the hill called Mahéndragiri in Ganjám, where he planted a pillar of victory. Vimaladitya was not deposed, however, and was succeeded by his son

<sup>1</sup> *Indian Antiquary*, xx, 93 ff and 266 ff

<sup>2</sup> *South Indian Inscriptions*, II, 364

<sup>3</sup> *Epigraphia Indica*, vi, 349

<sup>4</sup> There is some doubt about the duration of his reign, for though the dates of his and his successor's accession are given as in the text, his reign is generally represented as having only lasted seven years.

Rájarája (1022-62), who also married a princess of the Chóla royal house. This king fixed his capital at Rajahmundry, and it was during his reign that the Mahábhárata was translated into Telugu.<sup>1</sup>

His son Kulóttunga was afterwards the famous Kulóttunga Chola I, who, though belonging on his father's side to the ancient line of Vengi, claimed to succeed to the Chóla throne at Tanjore through his mother and his grandmother, and ultimately founded a new Chóla dynasty in the south. While heir-apparent to the Vengi throne he distinguished himself by capturing elephants and defeating a king, but when his father Rájarája died he was ousted from the succession by his paternal uncle Vijayáditya VII.

The latter's rule appears to have been disturbed by invasion. The Western Chálukya kingdom had revived after the fall of the Ráshtrakutas, and its great monarch Vikramáditya VI (whose capital was at Kalyáni north-west of Hyderabad) was by this time harassing both the Chóla and the Vengi countries. He twice invaded the latter,<sup>2</sup> but was, however, defeated by the Chóla king, who re-established his authority in Vengi and restored Vijayáditya VII to his throne there.<sup>3</sup> 'His elephants drank the water of the Gódavari. He crossed even Kalingam, and beyond it despatched for battle his invincible army as far as the further end of Chakrakóttá. He reconquered the good country of Vengai and bestowed it on Vijayáditya, whose broad hands held weapons of war and who had taken refuge at his lotus feet.'<sup>4</sup>

About 1069 the then Chóla king died, and his son secured the throne with the help of the Western Chalukya king Vikramáditya VI. The Kulóttunga already mentioned claimed, however, to succeed as both grandson and adopted son of a former Chóla ruler. He took up arms, slew the new king, and entered on a fierce conflict with Vikramáditya VI. The accounts given by the two monarchs of the events which followed are widely different, but victory finally rested with Kulóttunga, who made himself king of the Chóla country and overlord of Vengi, and ruled till 1118 with the title of Kulóttunga Chóla I.

He magnanimously allowed his uncle Vijayaditya VII, who had before supplanted him, to continue in charge of

<sup>1</sup> *Ep. Ind.*, v, 31. He is well known to local tradition to this day under the name Rájarája Naréndra. Cf. Mackenzie MSS., Local Records, II, 231, 211, 75, and LX, 24.

<sup>2</sup> *S. Ind. Inscr.*, III, 37.

<sup>3</sup> Dr. Hultzsch in *S. Ind. Inscr.*, III, 128.

<sup>4</sup> His inscription quoted in the Government Epigraphist's report for 1898.

Vengi, and appears to have treated him with cordiality. When this man died in 1077, Kulóttunga appointed his own second son, Rájarāja II, as viceroy of Vengi. The latter seems to have been uncomfortable and insecure in his position. An inscription of this date says that finding 'a kingdom not such a pleasure as the worship of the illustrious feet of the elders, he returned to his parents, after having ruled over Vengi for one year'.<sup>1</sup> He was replaced (1078) by his younger brother Vira Chóda, 'the brave prince, the incarnation of valour,' who 'joyfully put on the tiara of the world.' This prince was superseded in 1084 by Kulóttunga's eldest son Rájarāja Chóda Ganga, but was reinstated in 1088-89 and continued to rule till at least 1092-93. He was then succeeded by another and better known brother, Vikrama Chóla, who ruled the Vengi country till about 1118. The reasons for these constant changes are nowhere stated, but it would appear that Kulóttunga placed no great reliance on his sons' loyalty to himself.

The only event of importance in this period is the conquest of Kalinga which was achieved by Kulóttunga some time before 1095-96. Kalinga was feudatory to Vengi and had withheld tribute for two years. Vikrama Chola also claims to have effected this victory, and it was perhaps achieved during his viceroyalty. He governed the Vengi country for some 20 years, and in 1118 he was called to the south to become co-regent with, and shortly afterwards the successor of, Kulóttunga, who seems to have died in that or the following year. On his departure a certain Chóda, the son of Gonka, was appointed as viceroy of Vengi, and was even honoured with adoption into Kulóttunga's family. His descendants (see below) long played a prominent part in the history of the district.

The Chóla supremacy in Vengi was at this point disturbed for a few years by the aged Western Chálukya king Vikramāditya VI, who took advantage of the departure of Vikrama Chóla and the death of his old enemy Kulóttunga to invade this northern province of theirs. Their viceroy Chóda submitted to him, and from 1120 to 1124 Vikramaditya was undisputed king of Vengi. His rule cannot have lasted long, as inscriptions of Vikrama Chóla, dated 1127 and 1135 respectively, occur in Kistna. After the latter of these years, however, neither he nor his successors took an active part in the government of Vengi. Occupied with their own troubles in the south, the Chólas gradually lost their influence in that province, and, though they were recognized as overlords by

<sup>1</sup> *S. Ind. Inscr.*, I, 60.

the various petty rulers who now divided the country, even down to a time when their power in Tanjore was shattered, they had little, if any, real influence in Vengi after the death of Vikrama Chóla

Of these petty rulers, the most important (and apparently the admitted suzerains over the others) were the Vélanándu family, to which belonged that Chóda who was adopted into Kulóttunga's family and left as viceroy of Vengi when Vikrama Chóla went in 1118 to join his father in the south. Vélanándu is said<sup>1</sup> to be 'an old name for the Chandhavólu country' (i.e., the western part of the Kistna delta), where the family appear to have been long established and to have ruled as feudatories of the Eastern Chálukyas. Chóda's father, Gonka I, seems to have ruled 'the Andhra country' under Kulottunga I, and is mentioned in an inscription at Chebrólu in the Kistna district dated 1076. A cousin of his named Vedula was a minister of Kulóttunga's son Vira Chóda when viceroy of Vengi, and, in recognition of his services against 'a Pándyan king,' was given by his master the overlordship of the country between the Kistna and the Gódavari. It was however under Chóda that the Vélanándu family first attained the position of viceroys of the Vengi country. He and his successors wielded considerable power. Chóda, as has been seen, bowed the neck to Vikramáditya VI, but his son Gonka II (*alias* Kulóttunga Chóda Gonka) claims to have ruled from Kálahastí in North Arcot to Ganjáma. The queen of the latter's grandson, Gonka III (1137-56), covered with gold the idol at Smbhácalam near Vizagapatam. The family seems to have been suppressed by the Kákatiyas of Warangal, in what is now the Nizam's Dominions, who forced their way into the country south of the Gódavari at the beginning of the thirteenth century. The last of them who is known to history was Prithísvara, the son of Gonka III, who ruled from 1163 to at least 1186.

Meanwhile another family, the Haihiya chiefs of 'the Kóna country,' were in power in the delta of the Gódavari. The delta taluk of Amalápuram is still known as the Kóna country. These people were apparently hereditary chieftains subordinate to the Vengi viceroys and the Vélanándu family. Their inscriptions in this district range from 1128 to 1206.

Other local rulers were the chiefs of Nadendla in the Kistna district, who seem to have recognized the authority of the Vélanándu line and have left inscriptions ranging from

<sup>1</sup> *Ep. Ind.*, iv 33 and *Manual of the Kistna district*, 214. The Vellánadu Smárta Telugu Bráhmans have a tradition that Vélanándu is a name for the country near Kondavid. See Chapter III, p. 52.

1130 to 1232, the chieftains of Ellore, whose records date from 1139-40 to 1211-12, a family whose inscriptions are found in several places in the delta, who claim descent from the Eastern Chálukya king Amma I (918-25) and the best known of whom is Mallapa III who seems to have ruled from 1173 to at least 1223, and Annala Reddi of Kórukonda (in Rajahmundry taluk), who is stated in one of the Mackenzie MSS to have ruled over the greater part of the lowlands of district 'for a long time' till he was 'succeeded' (*ie*, ousted) by king Pratápa Rudra of the Kakatiya line of Warangal

These Kakatiya kings had by now begun to lay the foundations of their empire on the ruins of the western Chálukya kingdom. As early as 1162 their king Rudra Déva boasted <sup>1</sup> that he had conquered the whole country as far as Srisaïlam (in Kurnool) in the south, and up to the salt sea on the east. The first indubitable inscription of the dynasty found in the Vengi country is one of Rudra Déva's son Ganapati at Chebrólu (in the Kistna district) dated 1213-14, <sup>2</sup> and that this king overcame the Velanándu chieftains is indicated by the existence of an inscription of his at Chandhavólu, their capital.

When the Kákatiyas first crossed the Gódavari is doubtful. An inscription at Draksharámam mentions king Ganapati (1213-53), but it is fragmentary and undated, and may belong to the time of his successor, and the first record in this district which can be unhesitatingly ascribed to the dynasty is one of Pratápa Rudra, dated 1317, at Palivela in the Amalápuram taluk. Ferishta moreover speaks of the king of Rajahmundry as an independent prince in 1295 <sup>3</sup>. It would thus seem that the Kákatiyas did not cross the Gódavari till some time after their conquest of Vengi proper, and that this district did not fall under their dominion until the end of the thirteenth century.

One of the Mackenzie MSS <sup>4</sup> which (where it can be checked) agrees in its facts and dates with local inscriptions and is thus presumably trustworthy, throws an interesting side-light on Pratápa Rudra's rule of the district. His local viceroys were two brothers named Pedda Malla Rázu and Chinna Malla Rázu, who held their court with great pomp and luxury at Bendapudi in the Tunji division. They were most oppressive in their rule, and a long list is given of the enormities they perpetrated. Finally, in 1322-23, Pratápa

<sup>3</sup> Scott's *Ferishta* Introduction, p. xii.

<sup>4</sup> Wilson's Catalogue, p. 396, 8, 3.

Rudra had himself to interfere, since 'the cultivators refused to follow their occupation and fled the country' The MS describes at length the rules he then laid down for the revenue administration of the province. The two viceroys eventually fell foul of the 'Rāja of Cuttack' (the Ganga king of Kalinga), Pedda Malla Rāzu having kidnapped the bride of one of that potentate's relatives as she was passing through the district. The Ganga king sent an expedition to revenge the affront, and, after a long siege, Bendapudi was taken and the two brothers were captured and beheaded.

The Mughal emperor of Delhi had long been jealous of the growing power of the Kakatiyas. In 1303 he had unsuccessfully attempted to crush their kingdom, in 1310 his general Malik Kāfur captured Warangal, but Pratapa Rudra soon recovered his independence, but in 1323 the Delhi heir-apparent, Muhammad Tughlak, took the town again and carried off its king to Delhi.

Muhammad Tughlak seems to have penetrated as far as Rajahmundry itself, for an inscription, dated 1324, on a mosque there describes its erection by him in that year. The tide of Muhammadan invasion receded almost at once, but from this point the influence of the kings of Warangal in the Telugu country disappears, and Vengi was ruled by the Reddi chiefs of Kōrukonda, Kondavid and Rajahmundry.

A history of the Kōrukonda Reddis is given in the Mackenzie MS already quoted. The founder of the line was Kōna or Kuna Reddi, 'a good Sudra,' who built the fort at Kōrukonda and made the place into a big town. His son Mummidi Reddi succeeded him, and (along with his two brothers) is said to have ruled as far as Tatipaka (either the village of that name in Nagaram island or its namesake in Tunī division) and to have founded one of the Kōrukonda temples in 1353. Mummidi Reddi was followed by his son Kuna Reddi, and he by his two brothers Anna Reddi and Kātama Reddi, one after the other. Their reigns are said to have lasted 40 years. The latter was succeeded by his son Mummidi Nāyak, by whom another of the Kōrukonda temples was repaired in 1394-95.

The Reddis of Kondavid were Sudra cultivators, but the family seems to have been in the service of the kings of Warangal and no doubt derived the beginnings of its power from this circumstance. They apparently ruled side by side with the Kōrukonda Reddis, for the inscriptions of the two overlap. Their earliest extant record is dated in 1344. Their original capital was at Addanki in Guntur, but they subsequently moved to Kondavid. The founder of the dynasty

was Véma, the son of Próla, who boasts that he conquered Raichúr and defeated certain kings, calls himself 'the lion to the elephant which was the Pándyan king' (whatever that may mean), and was a great patron of Telugu and Tamil literature. Of his successors, two are stated to have fought against the Musalmans and three were men of letters. His grandson Kumáragiri placed his minister and brother-in-law, Kátaya Véma, in charge of the eastern portion of his dominions and made Rajahmundry the capital thereof. Kátaya Véma's dates range from 1385 to 1422 and an inscription of his occurs in the Simháchalam temple in Vizagapatam.

On the death of Kátaya Véma, one Alláda the son of Dodda Reddi obtained (it is not clear how) the throne of Rajahmundry, and founded a new, though short-lived, dynasty. His inscriptions appear as early as 1415-17 in the delta (at Palakollu, Palivela, and Drákshárámam) and he is represented therein as being the friend or servant of Kátaya Véma, whose enemies he claims to have 'uprooted'. His military operations were extensive. He says that he 'befriended' the Gajapati of Orissa and the king of Karnáta (i.e., the king of Vijayanagar, in the Bellary district) who was allied with the Gajapati, and defeated a Musalman general called Alpa Khan. He also claims to have defeated the Reddis of Kondavíd. His sons Allaya Véma and Virabhadra ruled jointly, and members of the family are mentioned in the Drákshárámam inscriptions until as late as 1447.

In 1434 the Gajapati dynasty of Orissa was founded by Kapilésvara, the minister of the last Ganga king of that country.<sup>1</sup> Kapilésvara had shortly before been in alliance with the Rajahmundry Reddis and the Vijayanagar king against the Muhammadans, but he none the less obtained the assistance of the Báhmaṇi king of Kulbarga, then the most powerful Musalman chief in the Deccan, in establishing himself in his new position. By 1454 he was recognized as suzerain as far south as Kondavíd, and a minister of his was ruling at Rajahmundry in 1458, so, though the details of the conquest are unknown, he had apparently seized the whole of this district.

In 1470, however, his successor Purushóttama applied to the Báhmaṇi king of Kulbarga, for help against a rival claimant, and was forced to cede to that ruler, as the price of his assistance, the districts of Rajahmundry and Kondapalle in Kistna. The Hindu inhabitants of Kondapalle, however, soon afterwards revolted, murdered the Muhammadan governor,

and called for help from Purushóttama, who accordingly came and besieged Rajahmundry. A Musalman army relieved that place, and about 1478 the Kulbarga king Muhammad took terrible vengeance on the Orissa country and forced Purushóttama to purchase his withdrawal by a present of valuable elephants. Kondapalle was retaken, its temple destroyed (the Bráhmaṇ priests being massacred), and a mosque erected on the site. The Kulbarga king remained three years at Rajahmundry, expelling or reducing refractory zamindars and establishing military posts. He appointed one Málik Ahmed as his viceroy, and at the end of 1480 left the district to prosecute his conquests in the south.

A few years afterwards, however, the Kulbarga kingdom was dismembered by revolutions which resulted in the formation of the three Muhammadan kingdoms of Bijápur, Ahmadnagar and Golconda in the years 1489, 1490 and 1512 respectively, and the kings of Orissa recovered this district.

In 1515, Krishna Déva, the greatest of the kings of the Hindu empire of Vijayanagar, the capital of which was at Hampe in the Bellary district, and which was now at the zenith of its power, marched northwards in great strength. He took the strong fort of Udayagiri in Nellore after a siege of a year and a half, and then invested Kondavíd. The king of Orissa, Pratápa Rudra, came south to relieve the latter place, and Krishna Deva quitted the siege and advanced to meet him. The two armies came face to face at 'a large river of salt water crossed by a ford' (presumably the Kistna), and Krishna Deva offered to retire six miles so that his adversary might cross the river unmolested and they might then fight on equal terms. Receiving no reply, he forded the river himself in the face of the Orissan army, losing heavily in the operation, engaged the enemy on the other side, and won a complete victory. He took Kondapalle after a siege of three months, escaladed Kondavíd (capturing there the wife and son of the Orissan king and many of his nobles) and then advanced as far north as Potnuru in the Vizagapatam district, where he set up a pillar of victory. From this place he despatched several challenges to Pratápa Rudra, daring him to come and fight, and when these met with no response he eventually returned south to his own capital. He subsequently sent back Pratápa Rudra's queen and married his daughter.

Before many years had passed the Muhammadans again attacked the country. The invader this time was the first king of the new dynasty of Golconda, Qutb Shah (1512-43), and the cause of the war was the assistance given by the house

of Orissa to a rebellious feudatory of Golconda. The large forces of the Hindus were routed by the fanatical courage of the Musalmans, who took Kondapalle and won a battle in the neighbourhood of Rajahmundry. The king of Orissa sued for peace, and consented to surrender to Golconda the whole of the territory between the Kistna and Gódvári rivers.

Meanwhile domestic revolutions had weakened the kingdom of Orissa. Two sons of Pratápa Rudra succeeded him one after the other, and ruled for a year or two till they were both murdered in 1541-42 by a minister named Góvinda Deva, who took the kingdom for himself.<sup>1</sup> He and his sons ruled till 1559-60, when a Telugu named Harichandana raised a revolt, killed two of the sons of the usurper, and himself ruled till 1571, when the kingdom fell finally into the hands of the Muhammadan kings of Golconda.

This conquest had not been effected without severe fighting. The Hindu Rája of Kondavid attacked the Musalman garrison of Kondapalle, and the chief of Rajahmundry, one Vidiádrí, who was apparently<sup>2</sup> a prince of the house of Orissa, laid siege to Ellore, which was also held by the Muhammadans. The latter was signally defeated and fled to Rajahmundry. The Golconda troops laid waste the country round that town and were then called away (1564) to assist the other Musalman kings of the Deccan in the joint attack on Vijayanagar which resulted in the overthrow of that empire in the great battle of Talikóta, north of the Kistna river, in 1565. That decisive campaign won, Golconda's conquest of Gódvári soon recommenced. The forts of Peddapuram and Rájánagaram (from which reinforcements and provisions were being sent to Rajahmundry) were first taken, the latter with difficulty because of the narrowness of the paths and the thickness of the jungles which had to be traversed. Rajahmundry was then attacked. The Hindus were defeated in a desperate battle outside the walls (though they broke the left wing of the invader's army) and the fort was then invested for four months, when it surrendered. This took place in 1571-72. The Muhammadans then marched north, reducing the fortified places on the way, and finally conquered all the country of Orissa as far as Chicacole in Ganjam.

Their control of their new possessions was apparently far from firm, and disorders and outbreaks were continual. The Reddis of the hills, for example, plundered Ellore and

<sup>1</sup> Mr Chakravarti's paper already quoted.

<sup>2</sup> Grant's *Political Survey of the Northern Circars*, appended to the *Fifth Report on the affairs of the East India Co* (1812) Madras reprint of 1883 p 142.

Nidadavólu, and for some time kept up a desultory resistance against the forces sent to suppress them. When attacked, they dispersed, only to reassemble in difficult passes and ravines, and it was with difficulty that tranquillity was restored. A standing militia appears to have been maintained, but its efforts to keep order were not always successful, and its exactions from the inhabitants increased the miseries of the country.

It was during the Golconda rule that the earliest English settlements on this coast were made. Masulipatam was first visited in 1611 and the factory at Madapollam near Narasapur (also in Kistna) was founded about 1678. Of the settlements in this district, that at Injaram near Yanam was established in 1708, and that at Bendamurlanka in 1751. The Dutch had several important outposts in the neighbourhood, but the only one in this district was Jagannáthapuram, now a part of Cocanada. The French started a factory at Yanam about 1750. None of these outposts had at this time any influence worth mentioning on the history of the district and it is sufficient for the present to chronicle the fact of their existence.

Meanwhile, in 1686, Aurangzeb, emperor of Delhi, marched to reduce the south of India to his authority. In the next year he overthrew (among others) the kingdom of Golconda, and the country passed under the direct rule of Delhi. He appointed to rule his new territories a viceroy who was known as the Subadar of the Deccan (and later as the Nizam of Hyderabad) and resided first at Aurangabad and afterwards at Hyderabad. The subadar consisted of 22 provinces, of which Rajahmundry and Chicacole were two. With the provinces of Kondapalle, Ellore and Guntur they formed what were known as 'the Northern Circars,' a name which still survives. The system (or want of system) of administration remained unchanged, and disorders continued as freely as before.

In 1724 the Subadar of the Deccan (Nizam), who had long been virtually independent of Delhi, became so in fact, and appointed his own nominees as Nawábs of the provinces under him. Rustum Khán was appointed to Rajahmundry and is still known to local tradition as Háji Hussain.

The country was in great disorder. Zamíndars, or farmers of the revenue, had generally availed themselves of the late political disturbances to usurp the rights and feeble authority of their Muhammadan superintendents. They defrauded the public treasury and squeezed with an iron hand the husbandman and manufacturer. The new ruler set himself to suppress

them. 'Those who escaped the sword were proclaimed as traitors, and, a reward being offered for their own with their adherents' heads, a sufficient number was soon collected to erect two shocking pyramidal monuments, called *kullamindr*, near each of the provincial capitals'<sup>1</sup> Temporary *amins* were for a time appointed in place of the refractory zamindars to collect the revenue, but the indolence and depravity of the ruling nation soon made it necessary to revert to the ancient system, and new zamindars were appointed. These quickly became guilty of the same outrages as their predecessors, and in later years their descendants caused constant disorders throughout the Northern Circars.

In 1748 the Subadar of the Deccan died, and a great struggle followed for his place. The events of this contest relate less to the history of Gódvári than to that of the southern districts, and it is sufficient to note here that the French and English (who were now powers of importance) each took different sides, and that after many vicissitudes Salábat Jang became Subadar in 1751 through the influence and aid of the former. In his gratitude for their help, Salabat Jang ceded the Kondavíd country to them in 1752 and four of the Northern Circars (not Guntur) in 1753. They had already (in 1750) been granted Masulipatam and the adjacent country, and Bussy, the French general, sent M. Moracin, the officer in charge at Masulipatam, instructions to take over the newly ceded territory.

Jafar Ali, governor of Chicacole, was however in no way disposed to surrender his position quietly to the French, and conspired with the Rája of Vizianagram, the most powerful of the renter-chiefs who had come into existence during the Musalman rule, to oppose M. Moracin's entry. The latter seduced the Rája from the compact by offering to lease him the Rajahmundry and Chicacole circars at a rate much below their value, and Jafar Ali then called in the aid of the Maráthas of Nagpore, who crossed the gháts with a large force, devastated both circars from end to end, and regained their own country by way of Ellore with an immense booty.

In July 1754 Bussy went in person to Masulipatam and Rajahmundry and restored order there. Some of the troublesome zamindars were dismissed, efforts were made to ascertain the real revenue collections made by these renters and on this datum to found an adequate assessment, and they were required to maintain a *sibbandi*, or militia, of 12,000 men to keep the public peace, collect the rents, and, when called upon, to repel invasion.

<sup>1</sup> Grant's *Political Survey, etc.*, 143.

Soon afterwards, however, relations between Bussy and the Nizam became strained, at last an open breach occurred, and for six weeks in 1756 the former had to entrench himself near Hyderabad against the latter's troops

He was eventually relieved by reinforcements from Masulipatam and taken back into favour, and at the end of 1756 he went to Rajahmundry with a strong force to re-establish his fallen authority in the Circars. Aided by the Rájá of Vizianagram, he soon reduced the country to obedience, and a force from Rajahmundry took the three English factories at Madapollam, Bendamurlanka and Injaram. Except for twenty men at the last-named, these places had no garrisons, and resistance was out of the question.

In January 1758 Bussy returned to Hyderabad, and in July he was summoned by Lally, the new Governor of Pondicherry, to proceed south, with all the troops that could be spared, to assist in the operations against Madras. His departure was a fatal blow to the fortunes of the French, who within ten months were driven out of the Circars.

Almost as soon as he had gone, the new Rájá of Vizianagram, who was dissatisfied with the arrangements made by the French at the time of his predecessor's decease, seized Vizagapatam, hoisted the English flag there and made overtures to the English in Calcutta and Madras, offering to render them every assistance in his power if they would send an expedition to invade the Northern Circars.<sup>1</sup> Clive, who was then at Calcutta, determined, despite the unanimous opposition of his Council, to fall in with the Rájá's proposals, an expedition was at once arranged, and the command of it was conferred on Colonel Forde. His force consisted of 500 Europeans, including artillerymen, 2000 sepoys and 100 lascars. It reached Vizagapatam in October 1758, marched thence in November, effected a junction with the levies of the Rájá of Vizianagram, and then proceeded southwards into this district.

The French had assembled in force at Rajahmundry and moved thence to Gollaprolu, a few miles north-east of Pithápuram. Their force consisted of 500 Europeans, 6,000 sepoys and a great many local troops, of whom 500 were cavalry. The whole was under the command of the Marquis de Conflans, Bussy's successor. The opposing forces came in sight of each other at Gollaprolu on December 3rd. Nearly a week elapsed before they joined battle, but at length on the 9th a most

<sup>1</sup> Orme's history (Madras, 1861), II, 355.

decisive action was fought near the little village of Condore (Chandurthi) a few miles north of Gollaprolu. The result was a complete victory for the English, the French losing all their baggage and ammunition and nearly all their artillery and retreating in confusion to Rajahmundry. The battle is described in more detail in Chapter XV.

Forde at once sent forward a force of 1,500 sepoys to occupy Rajahmundry, and the garrison there, imagining that the whole of the English force was upon them, abandoned the fort on 10th December and retired to the south. Forde again advanced on January 28th and reached Ellore on February 6th. Thence he detached a force to occupy the French factory at Narasapur, which was abandoned on its approach.

De Conflans had retired to Masulipatam, and at his earnest request the Subadar of the Deccan, Salábat Jang, marched to assist him down the valley of the Kistna. On the 6th March Forde appeared before Masulipatam and, after a month's siege, carried that fort by a brilliant assault. On the 14th May 1759 he concluded a treaty with Salábat Jang (who was so awed by his successes and harassed by disputes with a brother that he made no attempt to assist the French) by which the country round Masulipatam and Nizampatam was ceded as 'inam' to the English, and the Subadar promised to renounce all friendship with the French and prohibit them from ever again settling in the Circars<sup>1</sup>. By this treaty the whole of the country north of the Gódavari returned again to the dominions of the Subadar of the Deccan.

The district was not at once cleared of the French. A small force of about 250 Europeans and 2,000 sepoys had remained between Masulipatam and Rajahmundry to cut off the supplies of the English troops from that direction. This proceeded to Rajahmundry, where only a very small garrison had been left, and compelled the place to surrender. Soon afterwards, however, it left the district with the object of joining Salábat Jang.

M. Moracin, who had been sent from the south with reinforcements for Masulipatam before its fall was known, landed on November 11th at Cocanada (which was still in the possession of the Dutch) and endeavoured to foment disturbance by intriguing with Jagapati Rázu, a cousin of the Vizianagram Rája, who had assisted the French in the recent campaign and was still under arms. His efforts were unsuccessful, and he soon re-embarked and sailed for Pondicherry.

<sup>1</sup> Aitchison's *Treaties, etc.* (1892), viii, 278.

In December of the same year a small French force of 50 Europeans and 100 sepoy landed at Cocanada with the object of entering into negotiations with this same Jagapati Rázu. By this time the English army at Masulipatam, now under the command of Captain Fischer, had commenced its return march. Learning on his arrival at Rajahmundry of the presence of the French at Cocanada, Fischer proceeded thither at once and found the enemy posted in a village two miles from the Dutch fort. They fled at once inside the fort and eventually surrendered, and thenceforth no French forces set foot in the district.

The country north of the Góda-varí was now nominally subject to the Nizam, but he was too busy with other affairs to attend to its administration, and the consequence was that 'for seven succeeding years, the completest anarchy recorded in the history of Hindustan prevailed over all the Northern Circars. The forms, nay even the remembrance, of civil government seemed to be wholly lost'.<sup>1</sup> The provinces had been leased to one Hussain Ali Khán, but his authority was little more than nominal, and an English force despatched to establish it was interrupted by the invasion of the Carnatic by the Subadar. A small body of 200 sepoy and twelve artillerymen under Lieutenant (afterwards Sir Henry) Cosby did, however, reach Rajahmundry, was instrumental in saving Hussain Ali from a conspiracy formed by a disappointed rival to seize the town, and remained there till the Northern Circars were eventually ceded to the English.

This event occurred in 1765. Lord Clive, who had returned to India, entered into negotiations regarding the cession, and on August 12, 1765, received a grant of the Circars from the emperor of Delhi. The Madras Government hesitated to avail themselves at once of this grant of country which the Subadar of the Deccan considered to be his own property alleging that there was no immediate necessity for taking possession, since Hussain Ali Khán had already collected the revenues and but little more could be obtained that year. In the following March, however, they published the emperor's firman and sent General Callaud to take possession. The Nizam threatened to retaliate by invading the Carnatic, and Callaud was ordered to meet him at Hyderabad and negotiate a cession from him. The result was a treaty dated November 12, 1766, whereby the whole of the Northern Circars with the exception of Guntúr (which was not ceded till 1788) was handed over to the English. The

<sup>1</sup> Grant's Political Survey etc 146

latter on their side engaged to pay the Subadar a tribute of nine lakhs of rupees per annum, and to furnish him with military assistance whenever required. The treaty made no mention of the previous free grant of the country by the emperor.

Almost immediately afterwards the Subadar faithlessly joined Haider Ali of Mysore against the British, but the success of the latter nation in the south and an invasion of his country from Bengal brought him to his senses, and, by a second treaty dated February 23, 1768, the tribute was reduced and the imperial grant was acknowledged. Tribute continued to be paid until as late as 1823, when it was capitalized by the payment of a lump sum of Rs 1,66,66,666.<sup>1</sup>

The country was not at once administered directly by the English, but was leased out to native renters. The Gódavari district continued to be under Hussain Ali Khán. His lease expired in 1769, and then the system of Provincial Chiefs and Councils described in Chapter XI was introduced, this district being placed under the Chief and Council of Masulipatam.

It only remains to refer to the various disturbances of the peace by the rebellions of zamindars or the outbreaks (*fituris* as they are locally called) of hill tribes which have occurred since the English occupation. The powerful zamindars of Pithápuram, Pólavaram and Peddapuram occupied most of the centre and north of the district, while beyond them ruled the untamed mansabdars of Rampa Tótapalli and Jaddangi. At first, the latter recognized no authority whatever, while the former maintained large bodies of troops and did much as they liked. Constant attempts were made to reduce the power of both, but for a long time in vain. 'It has been the object,' wrote the Board of Revenue in 1794, 'of every new settlement with the zamindars to endeavour to reduce their military force, and a clause has been inserted in their caboolats binding them to keep up only such sibbendy (militia) as may be indispensably necessary for the purpose of collection and (in some situations near the hills) for protection, but a clause so vague and indefinite, it may easily be supposed, has never met the smallest attention from the zamindars.' Considerable difficulty was consequently experienced in keeping the hill men and the zamindars from breaking the peace.

The first disturbance appears to have occurred in 1785, and was due to disputes about the division and management of the property belonging to three brothers who owned,

<sup>1</sup> *Aitchison's Treaties, etc.* (1892), viii, 269.

respectively, the zamindaris of Gútála, Pólavaram and Kottapalli. A hill zamindar of Nágavaram took a part in the quarrel and opened hostilities by capturing Gútála in 1785. Troops had to be moved up to restore order, and some fighting took place. Somewhat similar disorders occurred in 1786, 1787 and 1790, and are described in more detail in the account of Pólavaram in Chapter XV.

These troubles were really in the nature of a family quarrel, and only incidentally involved resistance to Government. In 1794 Collectors replaced the Chiefs in Council, and since a famine had depopulated the country, the revenue due by the zamindars had been raised, and Government had resolved to be more stringent in the collection of its dues than hitherto, these new officers met with considerable opposition in the discharge of their duties. Difficulties in Peddápúram and Pithápúram were solved without bloodshed, but the renters of Mogalturru estate (near Narasapur in Kistna district) raised a serious outbreak.

This property had been administered by Government since 1787, and a petty insurrection occurred there in 1791. At the end of that year it had been resumed by Government and leased out to renters. These people would not pay their dues, and were imprisoned and sent to Conjeeveram. They escaped thence and made their way to Hyderabad territory, their families also flying from Mogalturru to Bhadrachalam. The zamindar of that place and the amildar at Kammamet in Hyderabad assisted the fugitives, who succeeded in collecting a force of 2,000 peons and making an incursion into the district in July 1795. They marched by way of Yernagudem to Mogalturru. The Collector was nearly surprised in his house, and was unable to attempt an armed resistance. The party, however, behaved with great moderation, committed no excesses whatever, and, on being assured by the Collector that a memorial of what they considered their wrongs would be forwarded to the Board of Revenue, returned to Bhadrachalam. Little further came of this disturbance, the memorial was dismissed, and the malcontents (who continued at Bhadrachalam) made no further incursion. In September of the same year some of their peons attacked Chagallu, on the other side of the river facing Rajahmundry, but were easily dispersed. A petty disturbance was also created in 1798 by a revenue defaulter who had fled the country along with the Mogalturru renters. He proceeded with 200 or 300 pikemen as far as Undi (near Bhímavaram), where he brutally murdered the *tánáhdár*, but he retreated into Hyderabad territory on the arrival of troops.

The most serious outbreak of this period occurred in the Gútála and Pólavaram estates, and involved something in the nature of a campaign. It is described in the account of Pólavaram in Chapter XV.

After the permanent settlement, things quieted down, and there have been few important outbreaks since. The pressure of that settlement and the enforcement of decrees against defaulting zamindars occasionally caused disturbances. It is to these that Munro refers in his minute of 1822 quoted in Chapter XI. 'We are every day liable,' he wrote, 'to be dragged into a petty warfare among unhealthy hills where an enemy is hardly ever seen, where numbers of valuable lives are lost by the climate, and where we often lose but never gain reputation.' He deplored the want of respect and loyalty to Government in the province, which he ascribed to the prevalence of the zamindari system. It was no doubt largely due to the gradual downfall of that system that the increased peace and order of the country were due.

A petty disturbance took place in 1858 among the hills north of Yernagudem, which is of interest as having been indirectly connected with the Mutiny. It originated in a private dispute among some hill chiefs about a woman, but the leader of the affair, Subba Reddi, pleaded that he had heard that Nána Sáhib was advancing with his victorious army and that 'whoever did most against the English would be rewarded most.' At the head of a large body of Kóyas he killed the village magistrate of Buttayagudem, who kept as his mistress a rich widow whom Subba Reddi wanted to marry to his son, plundered some villages, and successfully resisted a body of 60 or 70 peons led against him by the Head Assistant Magistrate. Two companies of Sappers and Miners were sent to Yernagudem and thence marched against the rebels. The only place where they made a stand was Jilugumilli (Pólavaram taluk) but their resistance was brief and they dispersed into the jungle. They were pursued by a force of armed peons embodied for the purpose, and Subba Reddi and seven other ringleaders were ultimately captured and hanged.

The Rampa country was a continual source of trouble. The disturbances there were not generally in the nature of a revolt against supposed oppression, since no revenue was collected in the country till towards the end of the century. They were either plundering raids or internal feuds. Government became involved in the latter by championing the mansabdar against his muttadars, and it was his abuse of this support which ultimately led to the Rampa rebellion of

1879 and the removal of the mansabdar. The chief disturbances which occurred were the mansabdar's incursion of 1813 into the plains, the trouble consequent on his expulsion in 1840, the resistance to him in 1858 and 1862, and the 'Rampa rebellion' of 1879. These are briefly described in the account of Rampa in Chapter XV

---

## CHAPTER III

### THE PEOPLE

---

GENERAL CHARACTERISTICS—Density of the population—Its growth—Parent tongue—Religions. THE JAINS. THE MUSALMANS. THE CHRISTIANS—American Evangelical Lutheran Mission—The Canadian Baptist Mission—The Church Missionary Society—The Roman Catholic Mission. THE HINDUS—Villages—Houses—Dress—Food—Amusements—Superstitions—Village caste, and family gods—Marriage rules and ceremonies—Funerals. PRINCIPAL CASTES—Telugu Brāhmins—Rāzus—Kōmatus—Kēpus—Kammas—Perkas—Idigas—Gamallas—Kamabattus—Sānis—Malas—Madigas—Kōyas—Hill Reddis.

THE Gōdāvari district contained, in 1901, 1,445,961 inhabitants, or 257 to the square mile. The density of the population in the various taluks and divisions varies greatly. In the Agency as a whole it averages only 51 persons to the square mile, while in the rest of the district it is as high as 516. In the Chōdāvaram and Yellavaram divisions of the Agency the figure is less than 35 but in Pōlavaram it rises to 103. Outside the Agency, the rich delta taluks of Nagaram, Cocanada and Rāmachandrapuram are the most thickly populated, while Peddapuram and Tunī come at the bottom of the list.

The population increased by ten per cent in the decade 1891-1901, against an average of seven per cent. in the Presidency as a whole. Much of this was due to the extraordinary amount of emigration from Vizagapatam which has occurred. The greatest proportional increase was in Cocanada, where it was as high as 16.5 per cent., in Bhadrāchalam, 15 per cent. and in Rajahmundry, 14 per cent. The relative advance was smallest in Pithāpuram, Tunī and Peddapuram.

The prevailing language of the district is Telugu, which is spoken by 96 per cent of the people. Hindustānī is the homespeech of 1.4 per cent of them, and the small remainder talk Uriya, Yerukala, Marāthī, and Kōya, the vernacular of the hill tribe of that name.

The large majority of the people (1,411,573) are Hindus or Animists. Only 24,646 of them are Musalmans and only 5,497 Christians. There are hardly any Jains. Musalmans are found in the largest numbers in Rajahmundry, Cocanada and Amalāpuram, and are fewest in Tunī and the Agency. Christians are commonest in Rajahmundry and Cocanada, the head-quarters of the chief missionary bodies.

As already noted in Chapter II, the district was once ruled by the Buddhist emperor Asōka and perhaps remained

Buddhist in religion until the middle of the seventh century. A number of Buddhist or Jain remains survive in it. The village of Ariyavattam in Cocanada taluk is sometimes called Jain-pádu ('the Jain ruins') and contains several large but rude images of figures sitting cross-legged in the traditional attitude of contemplation. These are not now worshipped, but images of a similar nature in the streets of Pithapuram are still worshipped by Hindus there under the name of *sanyasi dévulu* ('ascetic gods'), and are honoured with a festival in times of drought. At Nédunuru in the Amalápuram taluk are other images of this kind which are said to be the largest in the district, and yet other similar relics are found at Kazulúru, Yendamuru and Sfla in Cocanada taluk, Jalluru in Pithápuram division, Attréyapuram in Amalápuram, Tátipáka in Nagaram, and Dráksharámam in Ramachandrapuram taluk. There are also many large revetted wells in the Nagaram and Amalápuram taluks which for some obscure reason are called 'Jain wells.'

The relations of the Musalmans with their Hindu neighbours are on the whole friendly, though petty disputes sometimes arise at festival times, when the processions or observances of the one offend the other. Followers of the faith are generally engaged in menial work or petty trade, and few of them are wealthy. They have no local places of pilgrimage, though the Muhammadans of Draksharámam in Rámachandrapuram taluk say that the *darga* of their local saint was once regularly visited by the pious of the district. A few of the mixed class called Dúdekus occur. They are said to be the descendants of converts from Hinduism, and, though they profess the Muhammadan religion, most of them speak only Telugu, wear the Hindu cloth and not the trousers or the kilt (*lungi*) of the Muhammadans, and adopt Hindu names. They cannot intermarry with other Musalmans and are looked down upon because they are musicians and cotton-cleaners.

There are four Christian missions in the district, namely, the Roman Catholics and the Canadian Baptist Mission with their head quarters at Cocanada, the American Evangelical Lutheran Mission of Rajahmundry, and the Church Missionary Society, which works a small 'district' from Dummagudem in Bhadráchalam taluk.

The American Evangelical Lutheran Mission was founded by the North German Mission Society in 1844. The first missionary sent out was the Rev L M Valette. He selected Rajahmundry as his head-quarters and took up his residence there in 1844. Soon afterwards, in consequence of the

unsettled condition of things in Germany and financial embarrassment in the church, the North German Mission Society found itself unable to support the mission, and in 1851 transferred the care of it to the General Synod of the American Lutheran Church, which was working in the Kistna district with head-quarters at Guntúr

Owing to the difficulties regarding both men and means occasioned by the American Civil War, the General Synod found it impossible to carry on the work at all its stations, and in 1870 the mission was transferred to the General Council of the American Lutheran Church, by whom it is now managed

Six European missionaries and six ladies are now working in this district. The 'field' visited by them includes large portions of all the low country taluks except Nagaram, Cocanada and Tuní, and also the northern portion of Kistna, whence come the majority of the converts. Statistics of the work in this district alone are not available, but altogether the mission has now some 250 congregations and a baptized membership of nearly 12,000, manages a number of schools, and is educating some 5,800 boys in primary classes. Of its schools, the girls' and boys' central schools at Rajahmundry (the latter of which contains 150 pupils) are considerable institutions with substantial buildings, and the high schools at Rajahmundry and Peddápúram contain 350 and 540 boys respectively on their rolls. The mission is now erecting buildings for a new central boys' school and seminary at Rajahmundry and a hostel for the accommodation of 200 boys the estimated cost of which is Rs 60,000, and has also decided to put up new accommodation for the Peddápúram high school. The mission also supports a large dispensary<sup>1</sup> and a small hospital at Rajahmundry, and the erection of a new hospital building there, at a cost of Rs 60,000 has been sanctioned by the American Board which controls its affairs. The mission has nine churches in the district, ten bungalows and 154 school houses. Its total expenditure on education in 1904 was over Rs 20,000, and on medical institutions nearly Rs 5,000. The mission is in charge of the Rev J H Harper, who has kindly furnished the above information.

The Canadian Baptist Mission owes its origin to the Revs Thomas Gabriel and John McLaurin, D D, who started work in Cocanada in 1869. The present mission premises in that town were acquired in 1876. A station was established at Tuní in 1878, a seminary for training school-masters and

<sup>1</sup> See Chapter IX, p 151

preachers at Samalkot in 1882, and stations at Peddápúram ( in 1891 and Rámachandrapuram in 1893

The mission's 'field' in this district includes the whole of Cocanada and Tunī divisions and parts of the Pithápúram division and the Rámachandrapuram, Rajahmundry and Peddápúram taluks. Its European staff includes six missionaries, all of whom are ordained and five of whom are assisted by their wives, and nine unmarried lady missionaries. One of the missionaries possesses full medical qualifications and two of the ladies are trained nurses. The mission possesses 2,400 adherents and 24 churches, five of the latter being substantial buildings.

It also undertakes educational and philanthropic work. Its educational institutions include 35 day schools with an average attendance of 450 boys and 425 girls, 88 Sunday schools with 2,000 pupils, free primary boarding schools for boys at Rámachandrapuram and Tunī (preparatory for the Samalkot seminary), a free lower secondary boarding school for girls at Cocanada, the Timpany Memorial high school at Cocanada and the Samalkot seminary. The high school was founded in memory of the Rev A V Timpany, who was in charge of the mission from 1879 till 1885, when he died of cholera, and receives European boys and girls (the latter as boarders) and a few native girls. The Samalkot seminary comprises a theological school, a training school for primary teachers, a lower secondary school and a primary school, and its pupils number about a hundred. The mission has also a small industrial school with some twenty pupils at Cocanada. The total expenditure of the mission on education in 1903, including the salaries of the missionaries engaged solely in that work, amounted to Rs 25,580.

The philanthropic institutions of the mission include the Kellock Leper Home, the Phillips Memorial Home and the hospital and dispensary at Rámachandrapuram, and a hospital is being built at Pithápúram. The two Homes are referred to in Chapter IX. The mission publishes a weekly newspaper in Telugu and maintains a public reading room at Cocanada. The Rev H F Laflamme has been good enough to furnish this information regarding its work.

The mission at Dummagudem was started through the influence of Sir Arthur Cotton, and work was first begun there by his brother-in-law, the late Major-General Haig, R.E.,<sup>1</sup> when in charge of the Upper Gódvári navigation works (see p 128), and at the cost of the engineers on that project. The mission is now under the Church Missionary Society. No

<sup>1</sup> The builder of the Gannavaram aqueduct, see p. 86

European missionaries resided regularly at Dummagúdem till 1874, but since then, with an interval from 1879 to 1882, the Rev J Cain has been stationed there. The field of the mission is practically confined to the Bhadráchalam taluk, and the work lies mainly among the Kóyas and Málas. The converts number 900, and the mission maintains at Dummagúdem a dispensary, a lower secondary boys' school, a girls' day school and boys' and girls' boarding schools, besides seventeen day schools in other parts of the district. The lace-work done by the converts at Dummagúdem is referred to in Chapter VI.

The Roman Catholic Mission was started about 50 years ago by French priests of Savoy belonging to the mission of St Francis of Sales. It is included in the Diocese of Vizagapatam. The convent in Yanam was built by Bishop Neyret in 1850, the church at Cocanada in 1854 by Bishop Tissot, and the church at Yanam in 1859. Chapels have been erected at Samalkot, Dowláishweram and Rajahmundry. Two European priests are working in the district at Cocanada and Rajahmundry. The Roman Catholic congregation numbers some 900, of whom about one-third are Europeans and Eurasians and most of the others Tamils. Want of funds has hampered attempts to convert the Telugus.

The mission owns a handsome convent at Cocanada which is in charge of seven European Sisters, is used as a lower secondary school, and gives instruction to some eighty or ninety European and Eurasian girls, about half of whom are boarders. The convent at Yanam is used as a Hindu girls' school and teaches some 150 pupils, and the mission manages a boys' lower primary school at Cocanada and a small dispensary at the same town.

The very large majority of the population of the district are Hindus or Animists, and these require more lengthy treatment. The Animists, those who reverence animistic deities and not the gods of the Hindu pantheon, are almost all found in the Agency. An attempt will first be made to describe the salient features of the religious and social life of the Hindus of the low country (customs in the Agency are referred to in the accounts below of the Kóyas and hill Reddis) and then to give some description of the castes which are characteristic of the district or occur in it in unusual numbers.

The villages of the district, unlike those in the Deccan, were seldom fortified, and consequently (except in the delta) the houses are not closely crowded together, but are built with plenty of room between them, like those in southern villages.

The lowest castes are required to live in separate quarters, but the Bráhmans, unlike those of the south, do not mind dwelling side by side with Sudras and do not always have their own distinct streets

The houses seldom have terraced roofs, and are generally thatched with palmyra leaves. Tiles are common in towns, but much less so outside them. Under the roof a terrace or ceiling of mud is often made with the double object of serving as a loft or store-house, and of protecting the house itself if the roof gets on fire. The walls of houses are generally of mud. Brick and stone are comparatively rare. In the Agency the walls are generally of split bamboo, sometimes smeared with mud. Outside the big towns, houses of two storeys are rare.

Among all but the lowest classes, houses are very usually built on one of two type plans, called respectively the *chdvadi illu* or 'hall house,' and the *manduva illu* or 'courtyard house,' also called the 'fourroom plan.' The two figures below will give an idea of how each is arranged —

Manduva house

Chavadi house

Both have narrow pials in front. The essential difference is that in the *chdvadi illu* the door leads into a long broad hall (*chdvadi*) which stretches from the front of the house to the back, with rooms at the sides, whereas in the other the hall is a narrow passage running from one side of the house to the other, from which a door leads into a courtyard, open in the centre but surrounded by verandahs out of which the rooms open. The latter kind is most commonly used by the higher

or richer classes and resembles the typical house of the southern country in having an opening (*manduva*) in the middle of the courtyard to let in light. The kitchen is usually located if possible in the western part of the house, but even if it is not, it is still called the 'west room' (*padamati illu*). The front steps of the houses are usually decorated with lines of powdered chunam, the lower parts of the doorposts with the usual saffron and kunkumam in honour of Lakshmi, and the sides of the pials and walls with white spots made with chunam and water.

The dress of the Hindus presents no very special peculiarities. Little boys of the higher castes usually wear short breeches or drawers as their only garments, and those of the poorer classes nothing but the languti or piece-cloth. Little girls of the two classes wear respectively a petticoat and bodice, and a bit of cloth wound round their waists. Orthodox married Brahman men tie their waist-cloths in the usual complicated manner called *panchakachcham*. Others of the upper classes tie them, as elsewhere, once or twice round the waist and then pass the upper front fold between their legs and tuck it in at the back. The favourite colour for the cloth is red. Málas and Mádigas ordinarily wear only a languti. The women usually dress in white cloths. Dancing-girls wear petticoats and bodices, and bodices are common among other castes also. The women's cloths are nearly always of cotton, silk is a rarity. Bráhmán women, as elsewhere, pass between their legs the outer front fold of the part which goes round their waists, and tuck it into their waists behind. Women working in the fields tuck their garments between their legs and then pull them up as high as they can. The women of most subdivisions of the Bráhmans, and also those of the Kómatas, Kamsalas and Perikes, wear the cloth over the left shoulder instead of the right.

The men do not usually shave the whole of their heads except one top-knot, as in the south, but often cut their hair like Europeans. Telugu Brahmans differ from their Tamil caste-fellows in frequently wearing moustaches.

Tattooing is very common as an adornment among the women, and two or three straight lines are sometimes tattooed across painful swellings, to act as a blister. The *ponna chettu* (the favourite tree of Krishna) is a popular ornamental pattern, and Rama's feet and the chank and *chakram* of Vishnu are also common.

The ordinary food-grain of the district is rice. Even outside the delta, in such upland parts as Tuni and Pithápúram,

rice is commonly eaten, though it is often mixed with cambu (*qanti*) and ragi (*tsódi*). In the Agency, cholam (*jonna*) is the commonest food. Brahmans, Kamsalas, and the Gavara and Lingadhári Kómatis are apparently the only castes which do not eat meat. Málas and Mádigas will eat beef and carrion, and Nakkalas are fond of jackal. A good many castes will eat hare, which elsewhere is often considered unclean.

The labouring classes have three meals a day, at 8 A.M., midday, and 8 P.M., orthodox Bráhmans two meals, at about 11 A.M., and 8 P.M., while officials and the richer people eat at 10 A.M., 3 P.M., and 8 P.M., and often have early coffee as well at about 7 A.M. But coffee is much less drunk in this district than in the south. Smoking, on the contrary, is a habit with all except the orthodox Bráhmans. Even the women of many castes smoke, and little boys and girls may also often be seen with cheroots in their mouths. Opium is freely eaten by most classes, especially, it is said, as a prophylactic against fever. It is also considered an excellent tonic for children and the aged.<sup>1</sup>

The boys of the district play much the same kinds of games as in the south. They fly kites and play at marbles, tipcat (*gónbilla*), a kind of rounders (*banthulu*), a sort of blind man's buff and many other games. Girls and women of the higher castes have quieter indoor pastimes, such as tossing up and catching tamarind seeds, and various games with cowries on a board. Men have no outdoor sports, but play cards and chess. A popular local card game is called *dasavatári*. This is played with a pack of 120 cards, containing ten suits of twelve cards each. Each suit consists of a king, a vizier and ten plain cards and is called after, and marked with the image of, one of the ten incarnations (*avatárs*) of Vishnu. In half the suits the higher plain cards take the lower, as in English cards, and in the other half the opposite is the case. A trump card is turned up and the tricks are won in much the same way as at Bridge. All except the higher classes are devoted to cock-fighting. Boatmen going down the river often take their cocks with them to pit them against the birds of the villages on the way. Puppet shows are very common. The puppets are concealed from the audience by a sheet on to which their shadows are thrown by a light behind them.

<sup>1</sup> The two common medicines of the district are *nalla mandu* ('black medicine,' i.e., opium) and *sella madu* ('white medicine,' i.e., a preparation of mercury). These are everywhere known and frequently used. The latter is a laxative. The former has a contrary effect.

The superstitions of the people are legion. A few typical examples may be given. If an owl perches on a house, it brings ill luck to the inmates. A crow cawing on the roof of a house indicates the arrival of a guest. Bad omens include being questioned regarding business on which one is setting out, or, directly after leaving the house, catching sight of one Bráhmaṇ, two Sudras, a widow, oil, a snake, a shikári, or a sanyási. Good omens are hearing a bell ring, a cannon go off, the braying of an ass, the cry of a Bráhmaṇ kite, or, on first leaving the house, seeing a married woman, a corpse, flowers, water or a toddy pot. Talismans are commonly worn. A usual kind is a flat piece of metal with a figure of Hanumán on it. Another, made of leather with the skin of a lizard got from a Mádiga stitched into it, is hung round the shoulders of weak and sickly children. Women and houses are supposed often to be possessed of devils, whom only a professional sorcerer can exorcise. Yerukala women are in great request as exorcists. In cases of illness supposed to be due to the ill will of a god or spirit, three handfuls of rice are carried round the invalid, and are then placed in a winnowing fan, which is held by both the patient and the sorceress. The latter then scans the former's face, professes to be able to read there the name of the offended spirit, and advises as to the propitiation to be made. In the Agency, belief in witchcraft is exceptionally strong, and almost every ill is thought to be due to the person's being bewitched. The old rája of Cherla, just across the border, was especially afraid of witches and wizards and before the British occupation of the taluk an easy method of ridding oneself of an enemy there was to accuse him of practising the black art. The rája immediately seized and hanged him<sup>1</sup>.

Childbirth is surrounded by a number of superstitions. A pregnant woman should not see an eclipse, or her child will be born deformed. The pains of childbirth are relieved by turning the face of the bull god in a Saivite temple away from the emblem of Siva, or by the woman's touching a ring made of a mixture of gold, silver, copper, lead and iron by a fasting blacksmith on the day of an eclipse. A child whose first tooth comes in the upper jaw is supposed to foreshadow evil to its maternal uncle, and may not be seen by that relative till he has neutralized the omen by seeing the reflection of the child in a bowl of oil and broken a cocoanut. Similarly, as elsewhere, a girl who has attained maturity in an inauspicious hour may not be looked at by her husband until they have seen each other's reflections in a bowl of oil. Some

<sup>1</sup> Rev. Mr. Cain in the *Indian Antiquary*, v. 303.

dreams are supposed to foretell events. Thus it is a good thing to dream of being bitten by a cobra, especially if the bite drew blood.

It is believed that a barren tree will bear if a naked man cuts a piece off it on the day of an eclipse, that the nesting of a clay-building fly in a house foretells the birth of a child, that the appearance of a swarm of ants or a blood-sucker in the house foreshadows some benefit, that a child which sneezes on a winnowing fan or on the door-frame will meet with misfortune unless balls of boiled rice-flour are thrown over it, and that a man who sneezes during his meals, especially at night, will also be unlucky unless water is sprinkled over his face and he is made to pronounce his own name and that of his birth-place and his patron deity. People who have lost two children and expect to have a third generally beg small pieces of gold from their neighbours with which they make a gold ornament to put in the nose of the new-born baby. The child is called, if a boy, Pullayya or Pentayya, and if a girl, either Pullamma or Pentamma, meaning respectively 'used up leaf-plates' or 'refuse'. The idea is to propitiate by due humility the nemesis of the power whose enmity has caused the death of the previous children, and is common in other districts.

Scarcity of rain is dealt with in various ways. It is considered very efficacious if the Bráhmans take in procession round the village an image of Varuna (the god of rain) made of mud from the bank of a river or tank. Another method is to pour 1,000 pots of water over the lingam in the Siva temple. Málas tie a live frog to a mortar and put on the top of the latter a mud figure representing Gontiyámma, the mother of the Pándava brothers. They then take these objects in procession, singing 'Mother frog, playing in water, pour rain by pots full'. The villagers of other castes then come and pour water over the Málas.

Besides the orthodox gods of the Hindu pantheon, three other classes of supernatural beings are commonly worshipped. These are the village goddesses referred to below, who are essentially local in character, the caste deities, who are objects of special reverence among special castes, and the family deities, namely the *virudu*, or soul of some dead bachelor of the family, and the *pérantam* or spirit of some woman outlived by her husband, who have been accorded apotheosis because they appeared in a dream to some member of the family and announced that they had been made immortal.

The village deities are always female, and usually can only be propitiated by the shedding of blood. They are not, however, merely malevolent, but will confer benefits on those whom they favour. Some of the most common of them are Nukálamma, Paradésamma, Néralamma Mallamma, Póléramma, Muthyálamma, Peddantamma, Sómálamma, Bangáramma, Mávullamma, and Talupulamma. Wherever one of them is established, her brother, who always goes by the name of Póturázu, is also worshipped. Some of them have a reputation far beyond the local limits of their villages, and are visited by pilgrims from distant places. Nukálamma of Kándrakóta in Peddápúram taluk, Mávullamma of Márédipáka in Rámachandrapuram and Sómálamma of Rajahmundry are famous almost throughout the district. These village goddesses are ordinarily worshipped only on the occasion of their annual festival. A buffalo and a number of sheep and fowls are then sacrificed to them. The fowls are killed at the four corners of the village, the buffalo is slain at about midnight on the last day of the festival, its blood is collected in a pot, and grain of various kinds is put into it. The blood is left in the temple in front of the goddess, and a day or two later the prospects of the harvest are foretold from the degree to which the various kinds of grain have sprouted.

Among the deities who are worshipped by special castes are Kanyakamma, the goddess of the Komatis, referred to later, the Káttumai (who is also sometimes called Káttumáhésvarudu) of the Gamallas and Idigas, the Gontiyálamma (the mother of the Pándava brothers) of the Málas, the Kamsalas' Kámákshi-amma, the Karnabattus' Sómésvara, and the Mádigas' Mátangiralu. Bráhmaṇ families also often have some favourite deity whom they worship in preference to all others.

Maridamma, who in many respects corresponds to the Mariamma of the south, is purely malevolent in character and is not in the habit of conferring benefits. She brings disease upon the villages, but can be induced by becoming worship to hold her hand. She is offered animal sacrifices whenever serious sickness visits a village. Sometimes a small car is made to which pigs and fowls are tied and which is then dragged through the village. Every household pours offerings of rice, etc., upon it and it is at last left outside the village limits to symbolise the departure of the goddess. The animals are taken away by the Málas and Mádigas.<sup>1</sup>

<sup>1</sup> A somewhat similar ceremony is mentioned in the *Bellary Gazetteer*, 60.

Before proceeding to refer to the principal castes of the district it will be convenient to refer to some general aspects of the rules and ceremonies which prevail at marriages and funerals among the non-Bráhmán castes of the low country 1  
2  
c

Most of these castes are split into endogamous subdivisions, marriage outside of which is forbidden, and some have also exogamous sections of these subdivisions, marriage outside which is compulsory. The latter are known as *intipérulu*, or 'house-names'. The most suitable bride for a man is usually thought to be his maternal uncle's daughter, and in some castes he is compelled to marry her unless she be deformed or mentally deficient. This rule is called *ménarīkam*. Divorce and the re-marriage of widows and divorcées are not allowed by Bráhmans or the castes which copy Bráhmán ways. The same may be said of the practice of paying a bride-price.

There are three stages in the ordinary marriage. First a formal betrothal, secondly the wedding which makes the couple man and wife, and lastly a nuptial ceremony when they begin to live together.

The betrothal usually takes place in the bride's house, and is a formal ceremony at which *pānsupāri* is exchanged, the bridegroom is given new clothing (*sāpu*), or some other token of the undertaking is granted.

The wedding sometimes takes place in the bride's house and sometimes in the bridegroom's. It generally occurs after dark and usually occupies only one day, but among the Bráhmans and some higher castes it lasts for three or five days. In the latter cases the marriage-badge (*tdli* or *salamnam*) referred to below is tied round the bride's neck on the first day, and the saffron threads removed from the wrists of the happy pair on the last. On the day previous to the wedding the bridegroom's party goes to the bride's house with presents of fruit, etc., and a new cloth for her. Some married woman of the party then ties a saffron-coloured thread (*bondu*) round the neck of the bride, the ceremony being called *pradanam*. Sometimes this is done on the night of the wedding. On this night the couple are seated side by side, their toe-nails are solemnly cut by a barber man and woman, the bridegroom's front hair is clipped, and they both put on new clothes. Next the bride worships a rice mortar representing Gauri, the wife of Siva, and her parents make obeisance to the bridegroom. The pair then tie saffron threads (*kankunam*) round each others' wrists, put a little cummin on each others' heads and do reverence to the *tdli*, which the bridegroom ties round the bride's neck. They next pour rice mixed with ghee and milk on each others' heads (a ceremony

called *talambrālu* and signifying a solemn vow of fidelity) and the bridegroom places his foot on the bride's. This and the tying of the *kankanam* are the binding parts of the ceremony. The star Arundhati (popularly called Aranjōti) is pointed out to the bride as typical of chastity, and the couple do worship to some coloured pots (*avirēdi*) representing the gods. The relatives give presents of money (*kainam*) to the bride, which are not supposed to be retained, but are returned to the givers on the first convenient occasion. The final rites are performed next morning, or in some castes on the third or fifth day. The bridegroom ties a string of black glass beads round the bride's neck, and the saffron threads are removed from the couple's wrists. They then are given a pot of water coloured with chunam and saffron in which a ring and some other ornaments have been placed, and they scramble for the ornaments, like children hunting in a bran pie.

The nuptial rites, which are simple, are performed on a separate occasion, since days auspicious for weddings are not suitable for them.

The ceremonies at the re-marriage of a widow are, as elsewhere, much shorter. The bridegroom merely goes to her house, ties the *idli*, and takes her to his house the same night.

The dead are usually burnt, but children are buried and some simple rite is performed, such as the pouring of milk, either alone or mixed with rice or oil and ghee, on the grave. The ceremonies at the funerals of adults are much the same in all non-Brāhman castes. The body is bathed and is borne to the burning-ground on a bier. The *Mālas* and *Mādigas* carry it in their arms in a sitting posture. The corpse is set down three times on the road while rice is placed at the four corners of the bier. When it has been placed on the pyre, the son of the deceased walks thrice round it with a pot of water in which three holes have been made, and lights the pyre with face averted. The relatives then go home and worship a lamp. Further ceremonies are performed on the eleventh day afterwards (called the *pedda dinam* or 'great day') and on some day between the second and fifth after it, which is called the *chinna dinam* or 'small day'. On the latter the bones and ashes are collected and are offered a ball of cooked rice. The party then returns home and feasts.

Statistics of the numerous castes which occur in the Gódāvarī district will be found in the separate Appendix to this volume. Space prevents reference to the whole of them, and most of them, indeed, are common to the whole of the Telugu country and their ways do not differ in this district from those of their caste-fellows elsewhere.

The six most numerous communities (taking them in the order of their strength) are the Kápus, the landowning class, the Málas, outcaste agricultural labourers, the Ídigas, who draw toddy, the Mádigas, outcaste workers in leather, the Kammas, who are closely connected with the Kápus and resemble them in their social customs, and the Telugu-speaking Bráhmans

All these are shortly referred to below, and, in addition, some notes are given regarding a few communities which occur in greater strength in this district than in any other, namely, the Rázus, who claim to be Kshatriyas, the Kómatis, traders and money-lenders, the Perkes, who are cultivators, the Gamallas, an offshoot from the Idigas, the Karnabattu, weavers, the Sánis, many of whose women are dancing-girls, and the two hill tribes of the Kóyas and the hill Reddis.

Of all of these castes the Bráhmans take the highest social position, and they may be first referred to

Telugu-speaking Bráhmans are unusually numerous in Gódvári. Some of them, though their home-speech is Telugu, appear to have a Tamil or Canarese origin. Among the former are the Kónasima Bráhmans of Amalápuram taluk, who have a tradition (see p. 204) that they came from near Kumbakónam in Tanjore district, the Aramas, who are few and scattered, and the Divilis, who are to be found chiefly in Pithapuram taluk. The Telugu Bráhmans proper, also called Andhras, are a linguistic division of the Drávidas, one of the two great classes (Dravida and Gauda) into which all Bráhmans in this Presidency are divided. They are popularly subdivided into the following sectarian, territorial and occupational groups —

Andhra Brahmans	{	Vaishnavites	{	Tengalais	{	Vaidiki
				Nambis		Niyogi or Aru
				Goiconda Vyaparis		véla Niyogi
			{	Vehnadu		Pujari
				Véginadu	{	Vaidiki
				Telaganya		Niyogi
				Kasléya		
	{	Smartas		Muriknadu.		
				Kakumanu		
				Kalinga.		
				Tambala Pujari	{	Vyapari
				Karnakamma.		Vaidiki
				Prathamashakha.		

It will be seen that the primary division is sectarian, into Vaishnavites and Smártas. Among the former there are none of the Vadagalais, the rival sect to the Tengalais, Nambis are priests in the temples, and the origin of the name Golconda Vyapáris ('traders') is not clear

Among the Smártas, the Velinádus say they came from 'the Vidarbha country near Kondavídu', the Véginadus claim to have come from the Vengi country in the neighbourhood of Ellore, the Telagányas give their original home as the Trilingam country, which they locate between Srisaillam in Kurnool, Kálahastí in North Arcot, and Dráksharámam in this district, the Kásiléyas state that they belong to the Kósala country, or Orissa, the Murikinádus say that they come from 'the Máladamo country in the north', the Kaku-mánus are perhaps connected with the village of that name in the Kistna district, and the Kalingas are evidently connected with the ancient country of that name referred to in the last chapter. The Tambala Pujáris are an occupational subdivision, who officiate as priests in the Saivite temples and correspond to the Tamil Gurukkals. The Karnakammas say their real name is Karna Rukkumus and is derived from their adherence to the Ríg Véda. The Prathamásákhas ('people of the first division') profess to owe their name to the fact that they follow that division of the Yajur Véda. They also go by the name of the 'mid-day Paraiyans,' the story being that they labour under a curse which makes them Paraiyans for an hour at midday. The Velinádus and Telagányas are further subdivided into the well-known occupational groups of Vaidikis (or priests) and Niyógis (or secularists), and the former have also a third group, namely, the Pujáris. Karnakammas are split into Vaidikis and Vyapáris, or traders. The name Áruvéla Niyógi by which the Velinádu Niyógis are known is said to be due to the fact that this section numbered just 6,000 persons when it split off from the Vaidíkis. Its members have three sectarian subdivisions, namely Smártas, Lingadháris (who favour Lingáyat practices) and Golconda Vyápáris, who have gone over to the Vaishnavite creed. Some of these Smártas have taken to Vaidiki occupations, though Niyógis by descent, and are called Paddatis. With a few unimportant exceptions these numerous subdivisions of the Telugu Bráhmans will eat together but will not intermarry.

Though in the study of the Védas and the observance of the most important ceremonies of the caste the Telugu Bráhmans are not inferior to their castemen in the southern districts, they are less scrupulous in several minor matters. They

will smoke, for example, and eat opium. They perhaps, also, have less influence in religious and social matters over other castes than in the south. The lower classes do not make them the ready *namaskāram* obeisance which is usual in Tanjore, for example, nor is there the same anxiety to follow their social and domestic ceremonies. Nor do the Telugu Brāhmins hold themselves as severely aloof from the upper non-Brāhman castes as in the south. It has already been mentioned that they seldom live in separate quarters in the villages, and they will give a respectable non-Brāhman food in any part of their houses except the kitchen, a piece of latitude which would be most unusual in Tanjore.

Attached to the caste is the beggar community called *Vipravinódis* ('amusers of Brahmins'), who are professional sorcerers and jugglers who decline to perform unless some Brahman is present, and subsist chiefly on alms begged from the members of that caste. Several unconvincing tales are told to account for this odd connection between two such widely differing classes but, as will be seen immediately, several other castes in this district have beggar communities attached particularly to them and in some cases these are declared to consist of their illegitimate descendants.

The Rázus also stand high in the social scale. They are numerous in the Amalápuram and Rámachandrapuram taluks, and there is a large colony of them in Tunī town. They say they are Kshatriyas, wear the sacred thread, keep their womenkind strictly *gosha*, have Brahmanical gotras, decline to eat with other non-Brāhmins, and are divided into the three clans of Surya (sun) Chandra (moon), and Machi (fish) Rázus, of whom the first claim to be descended from the kings of Oudh, of the same lineage as Rama, the second, from the kings of Hastinápura, of the same line as the Pándavas, and the third from Hanuman and a mermaid. These subdivisions may eat together, and among the zamindars the first two intermarry. The solar line is the commonest in this district. Written contracts of marriage are exchanged, the wedding is performed in the bride's house, at the *praddnam* ceremony no *bundu* (saffron thread) is tied round the bride's neck, the bridegroom has to wear a sword throughout the marriage ceremonies, and he is paraded round the village with it before they begin, and the saffron thread (*kankanam*) which is tied round the wrists of the couple is of wool and cotton instead of cotton alone.

The Rázus are chiefly employed in cultivation. Their turbans are made to bunch out at the left side above the ear, and one end of them hangs down behind. They do not shave

any part of their heads and allow long locks to hang down in front of their ears

The beggar community attached to them are the Bhatrágas, who were originally their court bards and panegyrists, but now beg from other castes as well and have less special claim upon them than formerly. These people are notorious for their importunity and their gift for lampooning those who refuse them alms, and they trade upon the fact.

The Kómatis are the great trading and money-lending caste of the Telugu country, and are not popular. They call themselves Vaisyas, wear the sacred thread, claim to have 102 'gótras,' and of late years some of them have adopted Védic rites at their marriages and funerals in place of the Puránic rites which are traditional with them. But on the other hand their gótras are not Bráhmanical and they follow the Dravidian rule of *ménarikam* in their marriages. In this district they are subdivided into the Gavaras, Kalingas, and Traivarnikas ('third-caste-men'), who neither intermarry nor dine together, and the last of whom differ from the others in the strictness of their observance of Brahmanical ways. The Gavaras are by far the most numerous.

Their caste goddess, Kanyakamma or Kanyaká Paramésvari already mentioned, is said to be a deification of a beautiful Kómati girl named Vasavamma who belonged to Penugonda in Kistna. The Eastern Chálukya king Vishnuvardhana wanted to marry her, her caste-people objected and were persecuted accordingly, and at last she burnt herself alive to end the trouble. The headmen of 102 families, the ancestors of the present 'gótras,' sacrificed themselves with her. She has many temples, but the chief is at her native village of Penugonda. The fines collected at caste pancháyats are even now sent to this.

Of the 102 'gótras' some at least are totemistic, which is another argument against the twice-born origin of the caste. They are derived from the names of plants, and to this day the members of these gótras may not touch their eponymous plants, and even involuntary contact with them involves ceremonial pollution which must be removed by a bath. Some of these are given in the report on the Madras census of 1901, p. 162. The same volume gives authorities for the custom among Kómatis (which is strenuously denied by them) requiring them to give betel and nut to a Mádiga before a wedding is performed in the caste. The practice is said to be dying out or to be usually veiled by the Kómati giving the Mádiga some cobbling work to do and handing him the betel and nut with the amount of his bill. Members of the caste

who admit an obscure connection with these Mádigas explain it by saying that the latter protected them during their trouble with Vishnuvardhana. Some of the Velamas somewhat similarly arrange that a Mala couple shall be married just before a wedding in their own houses, and even find the funds. The Rev J Cain says that with the Bhadráchalam Velamas it is a Palli couple that is thus first married. Velamas explain the story by saying that a Málá once allowed a Velama to sacrifice him to propitiate the goddess who guards hidden treasure, and that the custom is kept up out of gratitude for the discovery of the treasure which resulted. Among some classes of Komatis the women do the cooking while in a state of nudity. Those who admit the practice say that it is done for cleanliness' sake, lest the touch of an impure garment should defile the food.

Attached to the Kómatis are two begging castes called Viramushtis and Mailáris. They are said by the Komatis to have been the messengers in their dealings with Vishnuvardhana, and, at the last, to have delayed the advent of the king till the holocaust was over. The Viramushtis are wrestlers and bards, and the Mailaris carry round an image of Kanyakamma and sing songs in her praise.

The Kápus or Reddis, by far the most numerous of the castes of the district, are landowners by occupation and are among the most respected of the non-Bráhman bodies. Closely connected with them are the Velamas, the Telagas, the Vantarlu and the Kammas referred to below, and all four of these are probably offshoots of the great Kápu clan. They will usually eat with Kapus even now, but they do not intermarry with them or with one another, and in several instances peculiarities of dress or customs have arisen. The Vantarlus, for example, arrange their top-knot further forward, and more to the left, than the others, tie their cloths differently, dress their women in petticoats and keep them gósha.

It is said that in some districts the Kápus have totemistic subdivisions, but these do not appear to exist in Gódavari. Their marriages are usually celebrated in the bride's house, the women of the bridegroom's family do not attend, and on the last day of the ceremony the couple pretend to plough and sow, a custom which exists among some of the Telugu castes who have emigrated to the Tanjore and Trichinopoly districts.

The Kammas are a cultivating caste closely akin to, and probably a subdivision of, the Kápus. Some of them say they were originally Kshatriyas, but were persecuted by a king because one of them called him a bastard, and therefore

sought refuge with the Kápus and adopted the customs of their protectors. Others of them say that they are descended from the same ancestor as the Velamas and some of the Kápus and that the subdivisions in these castes are the same as in their own. Like the Kápus, they are generally cultivators, and their social position and characteristics are similar.

In this district, Kammas are subdivided into the Kávitis, Erédís, Gampas or Gudas, Uggams and Ráchas, who eat in each others' houses and intermarry. The names have a totemistic flavour, but according to local accounts are derived from curious household customs, generally from traditional methods of carrying water. Thus the Kavitis ordinarily will not carry water except in pots on a *kávidi* the Erédís except on a pack-bullock, the Uggams except in pots held in the hand and not borne on their hips or heads, and the Ráchas except in pot carried by two persons. The Gampa women, when they first go to their husbands' houses, take the customary presents in baskets, *gampa* or *guda*. It is said that these practices are generally observed to the present day. The Kaviti and Uggam women are said to wear their cloths over the right shoulder and the Erédi and Gampa women over the left. The Erédi and Uggam women are said to be strictly *gósha*. The Kammas, support a special beggar caste, namely the Pichchiguntas. These beg only of Kammas, Velamas and certain Kápus.

The Perikes are a small cultivating caste who are particularly numerous in Gódavari. The name means a gunny-bag, and the caste were originally gunny-bag weavers. Those in this district are now mostly cultivators (the Písu Perikes, who still weave gunny, are said not to belong to the caste proper, who call themselves Rácha Perikes) but the gunny-bag plays a part in their traditions and ceremonies. They are perhaps commonest in the Prattipádu subdivision of Peddápúram taluk and the southern villages of Tuni. Their social position is similar to that of the Kápus and Kammas, whom they resemble generally in character and customs. Like some of the Kammas, they claim to be of Kshatriya stock, and say they are of the lineage of Parasu Ráma but were driven out by him for kidnapping his sister while pretending to be gunny-weavers. They say they were brought into this country by the king Nala mentioned in the Mahábhárata in gratitude for their having taken care of his wife Damayanti when he quitted her during his misfortunes. Perikes support the begging caste of the Varugu Bhattas, who, they say, helped them in their exile, and to whom they gave a *sanad* authorizing them to demand alms. These people go round the Perike houses for their dues every year,

The Perke marriage ceremonies are peculiar. On the day of the wedding the bride and groom are made to fast, as are three male relatives whom they call *suribhaktas*. At the marriage the couple sit on a gunny-bag, and another gunny, on which a representation of the god Mailar is drawn or painted, is spread before them. A figure of the same god is drawn on two pots, and these and also a third pot, are filled with rice and dholi which are then cooked by two married women of the party. The food is then offered to Mailar. Next the three *suribhaktas* take 101 cotton threads, fasten them together, and tie seven knots in them. Bride and bridegroom are then given cloths which have been partly immersed in water coloured with saffron and chunam, and they and the *suribhaktas* are fed with the rice and dholi cooked in the three pots. The couple are then taken round the village in procession, and on their return the knotted cotton threads are tied round the bride's neck instead of a *tili*.

The Idigas or Indras are very numerous in Górávan. They are the Telugu toddy-drawing caste. They are commonly called Chettis (*Chettigándlu*) in this district, but the name Indra is used in the north-east divisions and Idiga in the central delta. They claim to be descended from Vyása, the traditional compiler of the Mahábhárata. They are still largely employed in toddy-drawing (though some are cultivators) and consequently occupy a low position in the social scale. In some districts, it is said, they bury their dead, prohibit the consumption of alcohol and have endogamous subdivisions, but these things are not so in this district. Some are Saivites and some Vaishnavites, but these are allowed to intermarry.

Two of their marriage ceremonies are peculiar. The couple walk three times round four upright sticks placed so as to make a small square and connected with each other by cotton threads, and then the bridegroom cuts the cotton with a knife. They also make two cakes of rice flour, ghee and sugar, one of which is eaten by themselves and the other by their relatives.

The Idigas' special god is Káttumai, to whom they annually sacrifice fowls on New Year's Day, and daily offer a few drops of toddy from the first pot taken from the tree.

The Gamallas are ordinarily supposed to be Idigas who have bettered themselves and separated from that caste. The more wealthy of them are toddy and arrack shop-keepers but the poorer members of the caste draw toddy like the Idigas. Both classes worship the Idiga deity Káttumai. They support a begging caste called Yenúttis or Gavuda Jettis,

The Karnabattus are almost entirely confined to the Gódavari district, and are weavers by occupation. They forbid the re-marriage of widows, but eat even pork. They bury their dead in a sitting posture. Their caste headman is called *sēndpati* 'leader of an army'. Their special deity is Sómésvara, whom they unite to worship on the new-moon day of Pushyam (January-February). The god is represented by a mud idol made for the occasion. The *pujári* throws flowers over it in token of adoration and then sits before it with his hands outstretched and his mouth closed until one of the flowers falls into his hands.

The Sánis are a small caste of dancing-girls and prostitutes. In this district this class of women is made up of six perfectly distinct castes which are in danger of being confused, namely, the Sánis proper, the Bógams, the Dommara Sanis, the Turaka Sánis, the Mangala Bógams, and the Mádiga Bógams. Of these, the Bógams claim to be superior and will not dance in the presence of, or after a performance by, any of the others. The Sánis do not admit this claim, but they do not mind dancing after the Bógams or in their presence. All the other classes are admittedly inferior to the Sánis and the Bógams. The Mádiga Bógams only dance before, and consort with, Madigas and Málas. The Dommara Sanis, Turaka Sánis and Mangala Bógams will consort with any of the non-polluting castes.

The Sáni women are not exclusively devoted to their traditional profession. Some of them marry the men of the caste and live respectably at home with them. The men moreover do not as in the dancing castes of the south, assist in the dancing (as by playing the accompaniments or forming a chorus), but are cultivators and petty traders. Bógam men, however, follow the southern custom. The Sánis, like the dancing-girl castes of the south keep up their numbers by the adoption and even purchase of girls of other castes, such as Kápus, Kammas and Ídigas. They do service in the temples, but they are not required to be formally dedicated or married to the god, as in the Tamil country. Those of them who are to become prostitutes are usually married to a sword on attaining maturity.

The Málas are the great agricultural labourer class and are very numerous in the district. They are split into four endogamous subdivisions, the Kantes, the Bóyas or Sadur Bóyas, the Páyikis and the Mála Dasarís. Kúpe, Arava (Tamil) and Brúda ('marsh') are also given as subdivisions. The Mála Dasarís are the caste priests and the Páyikis are sweepers by occupation. The former are admittedly superior to the rest of the caste and the latter are generally regarded as inferior.

None of the subdivisions intermarry or eat in each others' houses. Málas eat beef and are consequently almost at the bottom of the social scale. They are not allowed to enter the Hindu temples, no other caste (not even excluding the Mádi-gas) will eat in their houses, and they pollute all Sudra castes by touching them or entering their houses, and a Bráhmaṇ by even approaching him. Even the Mádi-gas pretend to be polluted if a Málá enters their houses, but the Malas return the compliment. The ordinary barbers will not work for Málas and they either shave each other or have their own barbers. The ordinary washermen will wash their clothes if these have first been given a preliminary soaking. A peculiar ceremony at their weddings (which is also observed by the Mádi-gas) consists in burying handfuls of different kinds of grain, and sacrificing a fowl over the spot.

They have their own beggar castes, namely the Mashtigas, who are gymnasts, the Pambalas, who are musicians and the Kátikápus, who are jugglers. Round Tuní the jungle tribe there called Chentzus are also included among the Málá beggars.

Their special caste deity is Gontiyámma, the mother of the five Pandava brethren. They say (it is not an edifying story) that Bhíma, one of the five, threatened to kill his mother, who accordingly took refuge under an *avirédi* pot (the painted pot used at weddings) in a Málá house. For this, she was solemnly cursed by her sons, who said she should remain a Málá woman for ever. In commemoration of this story a handful of growing paddy is pulled up every year at the Dasara, and eight days later the earth adhering to its roots is mixed with saffron and milk, made into an image of the goddess, and hidden under an *avirédi* pot. For the next six months this image is worshipped every Sunday by all the villagers in turn, and on the Sivarátri night it is taken in procession round the village, accompanied by all the Malas bearing pots of rice and other food carried in a *kavidi*, and is finally thrown with much ceremony into a river or tank. This rite is supposed to mean that the goddess is the daughter of the caste, that she has lived with them six months, and that they are now solemnly sending her back with suitable gifts (the rice, etc.) to her husband. A common form of religious vow among Malas is to promise to send a cloth and a cow with the goddess on the last day of the rite, the gifts being afterwards presented to a married daughter. The part played by the image of Gontiyámma in the Malas rain-making ceremonies has already (p. 47) been described. Both Málas and Mádi-gas hold a feast in honour of their ancestors at Pongal—an uncommon rite.

- 1 The Mádigas are a numerous caste whose traditional occupations are tanning and shoe-making. Some of them say they are the descendants of a saint or demi-god called Jám̐bha-muni and a woman called Puramási who disturbed the saint in his contemplation and became his wife.

They are subdivided into the occupational classes of Mádiga Dásaris (priests), Mádiga Páyikis (sweepers), the Kommalas (who blow horns) and the ordinary Mádigas who follow the traditional callings of tanning and shoe-making. These will not dine together or intermarry. The last of them is by far the most numerous. The Dásaris are considered socially the highest, and the Páyikis the lowest, of the subdivisions.

Mádigas are much despised by other castes because they are leather-workers and eat beef and even carrion, and they take much the same low social position as the Málas. Their curious connection with the Kómatis has been mentioned in the account of that caste above. Their marriage and other ceremonies are very similar to those of the Málas. Their special caste goddess is Mátangi, who they say was defeated by Parasu Ráma and concealed herself from him under the 'tanning-pot in a Mádiga's house. At Pongal they worship their tanning-pots, as representing the goddess, with offerings of fowls and liquor.

The begging castes specially attached to the Mádigas are the Dekkalas, Mástidis and Tappitas or Bágavatas. Of these the Dekkalas are musicians who sing the praises of their patron's ancestors; the Mastidis are gymnasts, and the Tappitas are the same as the Mádiga Bógams, and are the dancers and prostitutes of the caste.

The Kóyas are a caste of jungle men found in the country on either side of the Gódavari from the point where the Indrávati joins it down to the apex of the delta. They occur as far south as Kammamet in the Nizam's Dominions, and on the north they stretch far into the Bastar State. The Rev J Cain of Dummagudem, who has lived among them for thirty years and published several accounts of their ways, and who has been kind enough to supply information embodied below, estimates that they form one-fourth of the inhabitants of Bhadráchalam taluk, but only a small portion of the population of Chódavaram. They are also common in Bastar and the Malkanagiri taluk of Vizagapatam. In the case of a tribe spread over such a large extent of such wild country it is difficult to be sure that statements regarding customs are universally applicable. What follows applies primarily to the Kóyas of Pólavaram and Bhadráchalam taluks and the

south of Bastar State<sup>1</sup> It has been stated<sup>2</sup> that the Kóyas are a section of the great Gond tribe, but in this district they have no theory of their origin except that they are descended from Bhíma, one of the five Pandava brothers By the people of the plains they are called Kóya Doralu, or 'Kóya lords' Their language, called Kóya, is Dravidian and bears analogies to Tamil and Telugu Most of the men, however, can speak Telugu, though the women know little but their own vernacular The highland, or *kutta*, Kóyas, who live in the uplands of Bastar, are distinct from the riverside, or *gommu*, Kóyas with whom we are concerned The latter say they were driven down from the Bastar plateau some two hundred years ago by the former They are rather despised by the highlanders, who call them rascals (*máyaldítílu*) and they acknowledge their inferiority by sending the *kutta* Kóyas gifts on festal occasions The tribe is also split up into occupational endogamous subdivisions, among whom are the Kammaras (blacksmiths), Musaras (brass-workers), Dólís (professional beggars), Pattidis (cultivators and beggars), Oddis (superior priests), Kaka and the Matta Kóyas, and the Racha or Dora Kóyas These last are by far the most numerous subdivision and consider themselves superior to all the others except the Oddis Some of the others are apparently not true Kóyas at all The Dólís are Malas from the plains, and definite traditions regarding the reception into the tribe, many generations ago, of the Kakas (who were Kapus) and the Mattas (who were Gollas) have been published by Mr Cain A contrary process is exemplified by the Bása Gollas, who were once Kóyas

Exogamous divisions called *gattas* occur in the tribe Among them are Mudó ('thiro') Nálo ('fourth') or Párédi, Aído ('fifth') or Ráyibanda, Aro ('sixth'), Nutamuppayo ('130th') and Peramboya In some places the members of the *Mudó*, *Nálo*, and *Aído* *gattas* are said to be recognizable by the difference in the marks they occasionally wear on their foreheads, a spot, a horizontal line and a perpendicular line respectively being used by them The *Aro* *gatta*, however, also uses the perpendicular line

The Kóyas are looked upon with a certain respect by the Hindus of the plains, but are held to pollute a Bráhma by

<sup>1</sup> Information regarding the caste will be found in the Rev J Cain's articles in *Indian Antiquary*, v 301, 357 viii, 33, 219 and x, 259 the *Christian College Magazine*, v (old series) 352-9 and vi (old series), 274-80 the Census Reports of 1871 and 1891 (paragraph 406 and page 227 respectively), Taylor's *Catalogue Raisonné of Oriental MSS*, iii, 464, and the Rev Stephen Hislop's *Aboriginal Tribes of the Central Provinces* (Nagpore, 1866), 4

<sup>2</sup> *Aboriginal Tribes of the Central Provinces* 4.

- touch and the better non-Bráhmans by entering their kitchens But the Kóyas, like other hill tribes, have no respect at all for Bráhmans or other Hindus merely on account of their caste

The Kóyas proper are chiefly engaged in agriculture Their character is a curious medley They excite admiration by their truthfulness, pity by their love of strong drink, listlessness and want of thrift, surprise by their simplicity, and their combination of timidity and self-importance, and aversion by their uncanny superstitions Their truthfulness is proverbial, though it is said to be less characteristic than of yore, and they never break their word Their intemperate ways are largely due to the commonness of the *ippa* (*Bassia latifolia*) tree, from the flowers of which strong spirit is easily distilled, and are most noticeable when this is in blossom Their listlessness has often been remarked "To the officer enquiring after *khabar* of game the reply is invariably *lédu* ('nothing'), while if approached on the subject of the utilization of their labour, they passively obstruct all progress by their exasperating reply of *répu* ('to-morrow')" Their reckless and primitive modes of agriculture will be described in Chapters IV and V Their ignorance and simplicity are attested by numerous stories One, vouched for by Mr Cain, relates how some of them, being despatched with a basket of fruit and a note describing its contents, and being warned that the note would betray any pilfering, first burned the note 'so that it could not see,' then abstracted some of the fruit, afterwards disinterred the note and delivered it and the basket, and were quite at a loss, when charged with the theft, to know how the note could have learnt about it They are terribly victimized by traders and money-lenders from the low country, who take advantage of their guilelessness to cheat them in every conceivable way Their timidity has on occasion driven them to seek refuge in the jungle on the appearance of a stranger in clean clothes, but, on the other hand, they expect (and receive) a considerable measure of respect from lowlanders whom they encounter They are perfectly aware that their title 'Dora' means 'lord,' and they insist on being given it They tolerate the address 'uncle' (*mámá*) from their neighbours of other castes, but they do not like being called Kóyas When so addressed they have sometimes replied 'whose throat have I cut?' playing on the word *kóya*, which means to 'slice' or 'cut the throat' When driven to extremes they are capable of much courage Blood feuds have only recently become uncommon in British territory and in 1876 flourished greatly in the Bastar State.

Of the Hindu religion the Kóyas know nothing. They worship deities of their own. Some of them have adopted the village goddesses of the plains, such as Kondalamma and Bairamma (near Pólavaram), Maisamma and Póléramma (near Bhadráchalam) and Muthyálamma and her brother Póturázu. Mr Cain says that Muthyálamma is specially revered as the goddess of disease, and as equivalent to the Maridamma of the plains. Other Kóyas adhere to the worship of the animistic deities of the hills and forests, the *konda dévatulu* Pálamuni, Nílamuni and Korrarázu, the god of tigers, are three of these. Mr Cain also mentions Kommalamma and a fearsome female devil called Pida, who is propitiated in December with curious rites. The Pandava brothers (especially Bhíma), and the wild-dogs who are supposed to be their messengers, are also worshipped. Human sacrifices, made sometimes to a dread deity called Mamuli, were not unknown in former days. Writing in 1876, Mr Cain said that there was strong reason to believe that two men had been sacrificed that year not far from Dummagudem, and that there was no doubt that in Bastar strangers were kidnapped and secretly offered up every year. During the Rampa outbreak of 1879-80 several constables and others were openly sacrificed by the rebels.<sup>1</sup> Mr Cain says that a *langur* (white-faced monkey) was ordinarily substituted for the human victim, under the name of *kurommapotu* ('a male with small beasts'), as an offering to appease the deity.

Most peculiar objects of reverence are the *vélpus*, a name which Mr Cain says is the Kóya for 'god'. They consist of small pieces of metal, generally iron and less than a foot in length, which are kept in a hollow bamboo deposited in some wild and unfrequented spot. They are guarded with great secrecy by those in charge of them and are only shown to the principal worshippers on the rare occasions when they are taken out to be adored. The Kóyas are very reticent about them. Mr Cain says there is one supreme *vélpu* which is recognized as the highest by the whole Kóya tribe and kept hidden in the depths of Bastar. There are also *vélpus* for each *gatta* and for each family. The former are considered superior to the latter and are less frequently brought out of their retreats. One of them called Lakkála (or Lakka) Rámu, which belongs either to the Áró or Perambóya *gatta*, is considered more potent than the others. It is ornamented with eyes of gold and silver and is kept in a cave near Sítanagarámu, not far from Parnasála in Bhadráchalam taluk. The

<sup>1</sup> For a description by an eye-witness, see G O No 2275, Judicial, dated 4th September 1879.

others are deposited in different places in the Bastar State. They all have names of their own, but are also known by the generic term *Ádama Rázu*.

Both the *gatta* and family *vélpu* are worshipped only by members of the sept or family to which they appertain. They are taken round the country at intervals to receive the reverence and gifts of their adherents. The former are brought out once in every three or four years, especially during widespread sickness, failure of crops or cattle-disease. The *vélpu* is washed, and a flag is then planted beside it. An animal (generally a young bullock) is stabbed under the left shoulder, the blood is sprinkled over the deity, and the animal is next killed, and its liver is cut out and offered to the deity. A feast, which sometimes lasts for two days, takes place and the *vélpu* is then put back in its hiding-place. The flag is taken round the villages where members of the *gatta* or family reside, and these make a feast and offer gifts. The flag of a family *vélpu* is a large three-cornered red cloth on which are stitched a number of figures roughly cut out of bits of cloth of other colours to represent various ancestors. Whenever any important male member of the family dies, a new figure is added to commemorate his services.

Like other hill tribes, the Koyas are firm believers in the black art and the power of wizards. In some parts whenever any one falls ill the professional sorcerer (*vezzugádu*) is consulted, and he reads both the cause and the remedy in a leaf-platter of rice which he carries thrice round the invalid. Whenever a man dies he is supposed to have been the victim of some sorcerer instigated by an enemy. An enquiry is then held as to who is guilty. Some male member of the family, generally the nephew of the deceased, throws coloured rice over the corpse as it lies stretched on the bed, pronouncing as he does so the names of all the known sorcerers who live in the neighbourhood. It is even now solemnly asserted that when the name of the wizard responsible is pronounced the bed gets up and moves towards the house or village where he resides. Suspected wizards have to clear themselves by undergoing the ordeal of dipping their hands in boiling oil or water. Sometimes they flee in terror rather than attempt this. Reputed wizards and witches are held in the greatest abhorrence, and one of the old complaints against British rule was that it prevented these people from being put to death. Mr Cairn mentions a case in which a Kóya was compelled (in 1876) to murder a woman of his family because she was thought to be a witch.

The Kóyas appear to have few festivals now. Formerly those who lived near Dummagúdem used to celebrate one whenever any crop was ripening. They still keep a feast for *jonna kotta*, 'the new cholam' harvest. The rites seem to vary. Mr Cain says that a fowl is killed and its blood sprinkled on a stone. In some places the victim is a sheep, and it and the first fruits are offered to the local gods and to ancestors. The *mango kotta* and *sámas kotta* are also important. Once a year is celebrated a feast similar to the well-known Chaitra Saturnalia in the Vizagapatam Agency, whereat all the men go out and beat for game and those who return empty-handed are pelted with mud and filth by the women and not allowed to enter the village that night. This is called the Bhudévi Pandigai, or festival of the earth goddess. In times of drought a festival to Bhuma, which lasts five days, is held. When rain appears, the Kóyas sacrifice a cow or pig to their patron. Dancing plays an important part at all these feasts and also at marriages. The men put on head-dresses of straw into which buffalo-horns are stuck, and accompany themselves with a kind of chant.

In Pólavaram and Bhadráchalam, Kóya villages are divided into groups, sometimes called *samutus*, over each of which is an hereditary head called the *samutu dora* or *yetimani*.

If a Kóya youth is refused by the maiden of his choice he generally carries her off by force. But a boy can reserve a girl baby for himself by giving the mother a pot and a cloth for the baby to lie upon, and then she may not be carried off. Widows and divorced women may remarry. The wedding takes place in the bridegroom's house and lasts five days. A *táli* and a saffron-coloured thread are tied round the neck of the girl. If the marriage was effected by capture, matters are much simplified. The girl is made to kneel, the boy stoops over her, and water is poured over both of them. The boy then ties a saffron-coloured thread round her neck and the ceremony is over. Girls who consort with a man of low caste are purified by having their tongues branded with a hot golden needle and by being made to pass through seven arches of palmyra leaves, which are afterwards burnt.

The Kóyas generally burn their dead, but infants are buried. Mr Cain says babies less than a month old are buried close to the house, so that the rain dropping from the eaves may fall upon the grave and cause fertility in the parents. When a Kóya dies, a cow or bullock is slaughtered and the tail is cut off and put in the dead person's hand. The liver is said to be sometimes put in his mouth. His widow's *táli* is always placed there, and when a married woman dies her *táli* is put in her mouth. The pyre of a man is lighted by

his nephew, and of a woman by her son. After the body is burnt, the ashes are made into balls and deposited in a hole at the side of the road which is covered with a slab. Many Kóyas place a perpendicular stone about three feet high, like the head-stone of a tomb, over the slab. No pollution is observed by those attending the funeral. The beef of the animal slain at the beginning of the rites provides a feast, and the whole party returns home and makes merry. On the eighth day a pot full of water is placed in the dead man's nouse for him to drink, and is watched by his nephew. Next morning another cow is slaughtered and the tail and a ball of cooked rice are offered to the soul at the burning ground. Mr Cain says that when a man passes an old friend's tomb-stone he will often place a little tobacco on it remarking that the deceased liked the herb when alive and will probably be glad of it now.

The same authority states that the only conception of a future state among the Kóyas is that the dead wander about the jungle in the form of *pisáchas* or ghosts. The Rev F W N Alexander however says that some of them believe that there is a heaven, a great fort full of good things to eat, and a hell in which an iron crow continually gnaws the flesh of the wicked. People who are neither good enough for heaven nor bad enough for hell are born again in their former family. Children with hare-lips, moles, etc., are often identified as reincarnations of deceased relations.

Kóya villages are small and are usually inhabited solely by people of the tribe. Any outsiders live in a separate quarter. The houses are made of bamboo with a thatch of grass or palmyra. The Kóyas are very restless, and families change frequently from one village to another. Before moving, they consult the omens to see whether the change will be auspicious or not. Sometimes the hatching of a clutch of eggs provides the answer, or four grains of four kinds of seed (representing the prosperity of men, cattle, sheep and land) are put on a heap of ashes under a man's bed, any movement among them during the night being a bad omen.

Tattooing is common. It is considered very important for the soul in the next world that the body should have been adequately tattooed.

The hill Reddis (or Konda Reddis) are a caste of jungle men having some characteristics in common with the Kóyas. They appear to be found only in the Rékapalle country, the hills in the north of the Pólavaram division and in Rampa, and still further north. They usually talk a rough Telugu, chipping their words so that it is often difficult to understand

them, but it is said that some of them speak Kóya. They are of slighter build than the Kóyas and their villages are even smaller. They will not eat in the house of a Kóya.

They call themselves by various high-sounding titles, such as Pándava Reddis, Rája Reddis and Reddis of the solar race (*surya vamsa*), and do not like the simple name Konda Reddi. They recognize no endogamous subdivisions, but have exogamous septs. In character they resemble the Kóyas, but are less simple and stupid and in former years were much given to crime. They live by shifting (*podu*) cultivation. They do not eat beef, but will partake of pork.

They profess to be both Saivites and Vaishnavites and occasionally employ Bráhmaṇ priests at their funerals, and yet they worship the Pándavas, the spirits of the hills (or, as they call them, 'the sons of Rácha'), their ancestors (including women who have died before their husbands) and the deities Muthyalamma and her brother Póturázu, Sárálamma and Unamalamma. The last three are found in almost every village. Other deities are Doddiganga, who is the protector of cattle and is worshipped when the herds are driven into the forests to graze, and Désaganga (or Paraganga), who takes the place of the Maridamma of the plains and the Muthyalamma of the Kóyas as goddess of cholera and small-pox. The shrine of Sárálamma of Pedakonda (eight miles east of Rekapalle) is a place of pilgrimage, and so is Bison Hill (Párikonda), where an important Reddi festival is held every seven or eight years in honour of the Pandava brothers, and a huge pig fattened for the occasion is killed and eaten. The Reddis, like the Kóyas, also observe the harvest festivals. They are very superstitious, believing firmly in sorcery and calling in wizards in time of illness. Their villages are formed into groups like those of the Kóyas and the hereditary headmen over these are called by different names, such as *dora*, *muttadár*, *varnapedda* and *kulapatradu*. Headmen of villages are known as *Pettamdars*. They recognize, though they do not frequently practise, marriage by capture. If a parent wishes to show his dislike for a match, he absents himself when the suitor's party calls and sends a bundle of cold rice after them when they have departed.

Children are buried. Vaishnavite Reddis burn their adult dead, while the Saivites bury them. Sátanis officiate as priests to the former and Jangams to the latter. The pyre is kindled by the eldest male of the family and a feast is held on the fifth day after the funeral. The dead are believed to be born again into their former families.

## CHAPTER IV

## AGRICULTURE AND IRRIGATION

WET CULTIVATION—Paddy ; its seasons—Its varieties—Rain fed paddy—Sowing *seeris* transplantation—Methods of raising seedlings—Preparation of fields—Transplantation and care of the crop—Second-crop cultivation—Third crops—Agricultural maxima—Wet crops other than paddy—Rotations—Cultivation of sugar-cane—Jaggery-making—Ratooning—Varieties of sugar-cane—Recent sugar-cane disease and the Samalkot experimental farm DRY CULTIVATION—Seasons, etc.—Cultivation—Cholam—Tobacco—Improvement of the leaf—Shifting cultivation in the Agency—Storage of grain IRRIGATION—Protected area THE GÓDÁVARĪ ANICUT—Origin of the idea—First estimates—The site and design—Progress of construction—Subsequent difficulties—Alterations since effected—Distributary works—The Gannavaram aqueduct—Completion of distributaries—Financial results of the scheme—Possible extensions of it—Its administration OTHER IRRIGATION SOURCES—Minor channels and tanks—Wells—Artesian wells ECONOMIC CONDITION OF AGRICULTURISTS

THE immense area irrigated from the Gódávārī anicut has naturally resulted in paddy being the most important crop in the district. The seasons for growing it in Bhadráchalam (where, however, very little is raised) differ from those elsewhere. In Bhadráchalam a short crop (*pinna vari*) is raised between May and August and a longer one (*pedda vari*) between August and January, while in the rest of the district the first (and chief) crop is grown between June and December and the second (if any) between January or February and April or May. The first crop season is called either the *sárava* ('white') season, from the fact that white paddy is grown in it, or the *tolakari* ('early') season, and the second is known as the *ddlava* ('black') season, because black paddy is grown then, the *sítakattu* ('cold') season, since the crop is sown in January, or the *údsangi* ('hot') season, because it is reaped in May.

Except in the delta and Bhadráchalam, two wet crops are seldom raised on the same land, but a dry crop is raised when the paddy has been harvested. This dry crop season is called the *payiru* or *apardlu* season.

Many varieties of paddy are grown in the district. The ryots divide them according to two main principles of classification, namely, the time a variety takes to mature—whether it is long (*pedda*) or short (*pinna* or *punasa*)—and its colour—whether 'white' or 'black'. The varieties raised in the delta

taluks, with their unfailing irrigation, naturally differ from those grown in the uplands of Peddápúram and Tuni, and both differ again from the favourite species in the different climate of Bhadráchalam. Apparently none of the white kinds are ever grown without irrigation, but on the other hand many varieties of black paddy are raised on wet lands. The most valuable and most popular species of all are called *atrakadalu* and *akkullu*, both of which are long white varieties. They are grown all over the district and have several sub-species. They require more water than the rest, but resist floods better. The kind known as *prayaga* (again long and white) is also very hardy, resisting droughts and floods equally well. The least valuable is the short white *rasang* paddy, which is worth Rs. 10 less per garce than the *atrakadalu* and *akkullu*. Though most prolific, it is very indigestible. A kind of intoxicating liquor is extracted from it.

Rain-fed paddy is raised on lankas, superior dry land or high-level wet land. Only certain kinds of paddy will flourish in this way, and the outturn is naturally smaller than on irrigated land. The seed is sown broadcast without preliminary soaking when the early showers fall in June. Weeds are removed twice with a weeder (*tollika*) some two or three weeks after sowing and again a fortnight or a month later. In the upland taluks the ryots weed with what is called a *gorru*, a log of wood provided with iron or wooden teeth and drawn by cattle. The crop is ordinarily harvested in September or October, but the shorter Bhadráchalam crop is reaped in August.

Except in the case of this rain-fed crop, paddy is seldom sown broadcast, but is transplanted from seed-beds. In Rajahmundry, Pólavaram, Pithápuram and Tuni sowing is of necessity resorted to in the case of the very deep wet fields in which, owing to their low level, it is impossible to control the depth of the water in the manner necessary with transplanted seedlings. In these fields a special kind of paddy, called *kásari*, is sown (unsoaked) in May before the rains or floods are received, the field having been ploughed when dry. This variety does not mind being submerged. Broadcast sowing is also sometimes adopted by ryots who cannot afford the expense of transplantation, but this is generally looked upon as bad farming.

There appear to be four recognized methods of raising paddy in seed-beds, which are known as *karéddaku*, *mettapa-dunu*, *mokkaku* and *dukaku*. In the case of the two former, the beds are ploughed when quite dry, before water comes down the

channels, while with the two latter they are not cultivated until they have been well soaked. The two former methods are very similar, the only noteworthy difference between them apparently being that in the *karéddaku* system an inch of water is let in directly the grain is sown and is drained off an hour later, while in the *mettapadunu* method the seed is sown after rain and the land allowed to get quite dry again before any water is let on to it. Similarly the *mokkaku* and *dúkaku* systems closely resemble one another except that with the former the seed is soaked and allowed to sprout before being sown. The cultivation of the seed-beds when dry is far more popular than the rival method, and the *dúkaku* system seems to be confined to Cocanada taluk and the *mokkaku* chiefly to Nagaram and Amalápuram.

The fields are first levelled with a crowbar (*geddapára*) or a pickaxe (*guddali*), various kinds of manure (chiefly the dung of sheep and cattle penned on the field, village sweepings, ashes, and oil-cake—green manuring is rare) are next applied, and then the field is irrigated and ploughed. On heavy soils (as near Ramachandrapuram) the ploughing is done after rain and before flooding, lest the plough-cattle should sink too deeply into the soil. Ploughing is always done at intervals, so that the soil gets thoroughly aerated, but as it does not begin until floods come down the river, the intervals are short. The parts of the fields near the ridges, which the plough cannot get at properly, are dug up with *mamuttis*. The field is levelled with a plank called the *patti*, drawn by hand or by bullocks. In Bhadrachalam a log of wood with iron teeth (*buruda gorru*) is used.

The seedlings are transplanted in July or August. The usual rule governing the irrigation of them is to give them a span's depth of water until the ears are formed and then to allow the field to dry up. The water is changed periodically in order to obtain a fresh supply of silt and to wash away alkaline matter. In Amalápuram, however, as much as a foot of water is let in after the first fortnight, while in the middle of September the field is drained and left dry for the fortnight known as the *uttara karti* because it is believed that worms which eat the stalks are generated in the water during that period.

Weeding is done one or two months after transplantation. In Amalápuram taluk manures of various kinds, such as gingelly, cocoanut and castor cake and a kind of fish called *chengudi royyi* are powdered and thrown broadcast over the fields three weeks after transplantation.

The second wet crop does not follow as close on the first as in Tanjore. In the latter district the ryots get seedlings ready for transplantation in the seed-bed before the harvest of the first crop is over, whereas in Gódvári it is believed that seedlings will not thrive until the warm 'corn wind' (*payiru gáti*), which is expected in December, sets in from the south. The first crop is harvested in November or December, and seedlings for the second crop are sown in December or January and are ready for transplantation in February and March. The preparation of the field for the second crop is a somewhat perfunctory operation. Levelling is generally omitted, and, in Amalápuram, manuring is generally omitted also. The kinds of paddy most commonly used (outside Bhadráchalām) are called *garika sannaṁ* and *dálava*.

Where the second crop is a dry crop, it is generally green, black, Bengal, or horse-gram, gingelly, or sunn hemp. Beans (*anumulu*), ragi and onions are also raised. Except Bengal gram, gingelly, ragi and onions, these are generally sown a week before the harvest of the wet crop and left to take care of themselves. For Bengal gram and gingelly, the field is ploughed and the seed is covered by dragging a green, leafy branch (*kampa*) across it, or, in sandy soil by ploughing it in. Ragi and onions are transplanted into plots about two yards square, made after the field has been ploughed without water five or six times in the course of a week, and are watered a week after transplanting and thereafter once a month.

Both cambu and gingelly are not infrequently grown as a third crop, sometimes called the *puṇasa* crop. In Tunj (perhaps elsewhere also) they are put down at the beginning of the first wet-crop season on the chance of the rains being late or insufficient and it being therefore impossible to grow a wet crop at the proper time, if at all. If the rains come while the crop is on the ground, it is either ploughed up to make room for the paddy or, if nearly ripe, is left to mature, the paddy transplantation being delayed accordingly.

In Rajahmundry and Rámachandrapuram third crops are sometimes secured by growing a short wet crop between June and September, followed by a dry crop harvested by January, and then by a short paddy crop of the *garika sannaṁ*, *dálava* or *rājabhógala* varieties, which is harvested in May.

The Gódvári ryots divide the six months from June to December into twelve *kártis* of about a fortnight each, called by the names of various stars. To each of these periods some agricultural operation or other is considered particularly appropriate. Even the Kóyas and hill Reddis, for example,

- believe that the best time for sowing paddy is the *mṛigaśra*, *kṛti*, which begins about the end of the first week in June, the *anūrādhā kṛti* (the latter part of December) is a name of happy augury, suggesting the harvest and the fulfilment of ryots' hopes, thunder on the first day of the *magha kṛti* is the happiest possible omen for the future, and 'will make even a pole on a fort wall grow', and so on. On the day before harvest the ryots run round their fields thrice repeating the name of the village goddess and crying out that she has given them a good crop. They then cut three handfuls of ears to represent the goddess and sacrifice fowls to them. When measuring the first heap of paddy of the first harvest of the year, they pour boiled rice-flour over it to propitiate the belly god.

Next to paddy, the irrigated crops chiefly grown are sugar-cane, betel, turmeric and plantains. Cocoanut and areca palms are also largely raised in Amalāpuram and Nagaram taluks, and are occasionally irrigated. Sugar cane is grown everywhere except in the Agency and the Tunī division, but is commonest in Peddāpuram, Rāmachandrapuram, Cocanada, Nagaram and Rajahmundry taluks. Betel on wet lands appears to be almost confined to Rāmachandrapuram and Nagaram taluks and turmeric to Peddāpuram, Rajahmundry and Amalāpuram, in which last it is raised without irrigation. Plantains are found chiefly in Rāmachandrapuram, Amalāpuram and Nagaram. In Rajahmundry and elsewhere a kind of sweet potato (*mādapulam dūpa*) is much cultivated.

As elsewhere, paddy is frequently grown year after year on the same land. When other crops are cultivated, a definite rotation is observed, but this differs widely in different parts. The ryots of Peddāpuram and Pithāpuram, for example, consider that an interval of two years is sufficient between two crops of sugar-cane, while those of Cocanada, Rajahmundry and Amalāpuram say that four years is necessary, and those of Rāmachandrapuram and Nagaram from six to eight years.

- In the cultivation of sugar-cane, the ground is sometimes broken up with a plough and sometimes with a crowbar. When a plough is used, the field is first well manured (in December or January) and then ploughed (without being flooded) from five to ten times. The ryots say the soil should be brought into such a soft and powdery condition that the footprints of the birds should be easily seen in it, and that a chatty full of water should neither spill nor break when dropped on to it. The field, still unirrigated, is next divided

into small plots (spaces being left for the channels which are to be dug later on) either with a hoe or a plough

The crowbar method of preparing the ground is partly adopted for the sake of economy, and so in this system manuring is also generally dispensed with. The jaggery which results is inferior, but the difference in the cost of cultivation is said to more than counterbalance this drawback. The land is dug up with the crowbar in January, and the clods are left to weather for ten days, when they are broken up and roughly powdered. The soil is not rendered sufficiently fine to be formed into plots without water, and the field has to be flooded.

Before planting the cuttings of sugar-cane the field is watered till it attains 'the consistency of cooked ragi' (*ambali padunu*) and then (in February or March) the cuttings are thrown on the ground and one end of them is pressed gently in with the foot. The tops are usually considered to make the best cuttings, but the rest of the cane is often used. The cuttings are kept in the shade for a fortnight before planting.

Regarding the irrigation of the crop, practice varies. In Peddapuram, for example, the field is flooded once a fortnight and then drained immediately. In Ramachandrapuram and Cocanada it is watered once a week, without draining off the water for six months, and then allowed to dry up as the rainy season approaches. The Peddapuram system is the better since stagnant water injures the roots of the cane.<sup>1</sup> Two months after being planted, the crop is manured round the roots with castor cake, green gram husk, bats' dung, or mud from the village site.<sup>2</sup> In some places green gram is sown in the field and dug in as a green manure. Three weedings are made with a hoe (*tolika*) at intervals of a fortnight. When the crop has been about two months on the ground the plots are broken up and the irrigation trenches are dug, the soil from them being thrown round the roots of the cane. About four months after planting, the leaves are twisted round the canes to prevent them from cracking or being dried up by the sun, and to check the growth of weakening lateral shoots. In the fifth month the canes are supported by bamboos. The crop is cut in February with a bill-hook (*pōta kattī*) and made into jaggery the same day.

The canes are crushed in iron mills, and the juice is boiled for about two and a half or three hours with chunam (a piece

<sup>1</sup> Papers printed with G O No 1153 Revenue, dated 30th December 1901, p. 24. C/ G O No 1020 Revenue, dated 14th September 1904, p. 32.

<sup>2</sup> The 'saltpetre earth' of Mr Benson's report, G O No 28 Revenue, dated 17th January 1884, pp. 7-14.

of chunam the size of a tennis ball is added to every pan of eight pots, or 168 seers, of juice), until it reaches such a consistency that it will no longer drip from the finger. It is then put into a pot and well stirred, and afterwards poured on to a bamboo mat to set. Some of the ryots say that an acre of land generally yields 15 candies of jaggery worth Rs 300, and that the cultivator makes a clear profit of Rs 100.

Ratooning is usual. The ratooned crop is ready to cut in ten months. It is inferior to the first, but the saving in the cost of cultivation is considerable<sup>1</sup>. Sometimes a third crop is cut.

Previous to the building of the Dowlaishweram anicut the cane grown in Gódvári was a thin, white, reed-like variety, similar to, if not identical with, the canes of Ganjám, South Arcot, Trichinopoly and other districts, which was called the *désavali* or 'country' cane. Its hard rind enabled it to resist the attacks of jackals, so that it was possible to grow it at a distance from the villages, it did not require much water, and the jaggery it gave was small in quantity, though very sweet and white. When the anicut was made, softer, larger and more juicy canes were introduced. The *sima* variety, a stout dark kind sometimes called the Mauritius cane, was introduced about 1870 by Messrs Cotton and Rundall for their factory near Rájavólu (Rázóle), but the history of the other species is obscure.

At the present time the kinds grown are *désaváli* or 'country,' *bonthakarri* or Bombay, *erra* or *sannakarri*, *kéli*, *bontha* or *bontha námalu*, *námalu* or *sára*, *mogili* and *pálabontha* (which seem to be only found in Rámachandrapuram taluk), and *vdli*, confined to Peddápuram. The Bombay or *bonthakarri* is very similar to, and possibly identical with, the *sima*, its jaggery is poor and of a purple colour. The *erra*, or *sannakarri* variety is a thin, dark cane producing similar jaggery. The *kéli* is a white cane with a cracked bark giving watery juice which wants more boiling than usual. The *bontha* or *bontha námalu* is a stout, striped cane, but the jaggery it gives is said to be very inferior. The *námalu* is a thin, striped variety, also producing a bad jaggery. The *mogili* is a very thick kind with knots at short intervals, its jaggery is

<sup>1</sup> The advantages of ratooning are still the subject of careful experiment at the Samalkot experimental farm. G.O. No 1020, Revenue, dated 14th September 1904, p. 29.

Much of what follows has been taken from the report of Mr C. A. Barber, the Government Botanist in G.O. No 1193, Revenue dated 30th December 1901, pp. 21 foll.

again like that of the Bombay cane, but it gives much juice and has hitherto shown a considerable immunity from disease. The *pálabontha* is a soft cane which is sold for chewing. The *vdlu* is like the 'country' cane, but a little thinner, and the juice is a little more watery and requires longer boiling. The *mogili*, 'country' and *pálabontha* canes grow only about six or seven feet high. The rest run up to nine feet.

About the end of the last century an obscure disease decimated the sugar-cane in the district. In March 1900 Government introduced cuttings from Hospet in Bellary, where disease was rare, but this did little good. The Government Botanist, Mr C A Barber, was accordingly deputed to make a thorough investigation of the crops and the disease, and his report, dated 24th April 1901, threw much light on the subject and suggested the starting of a Government agricultural station at which the matter might be further studied. The station was opened in 1902 at Samalkot. It has been recently decided that it shall be a permanent institution.

The diseases of the sugar-cane in the district are described in Mr Barber's first report. The moth borer, the ravages of which do such an infinity of harm in the West Indies and no small damage in Ganjám, is responsible for very little of the evil, perhaps owing to the scattered cultivation of the cane, or the system of tying the leaves round the stem, or the existence of its antagonist the *Isaria Barberi* fungus. The 'small borer,' or scolytid beetle, and the 'red smut,' or *Colletotrichum falcatum* fungus, are the greatest enemies of the Gódvani canes. These two pests go hand in hand, and it cannot as yet be said which prepares the cane for the ravages of the other. The fungus manifests itself inside the cane in 'well marked blotches with a characteristic white centre.' It can attach itself to any abrasion on the surface of the cane, even to the scar left by a fallen leaf, and thence makes its entry into the tissues of the plant. It is very slow in its progress. The *conidia* of the fungus are found at the base of the black tufts of hair in the holes left by old dead roots, and as an incrustation on the surface of the dead and dried up canes below the origin of the leaf. If a cane infested with the 'small borer' is opened, the surface is found to be covered with a mass of small dark beetles about one-twelfth of an inch in length, which are seen busily emerging from and re-entering their small burrows. A strong vinous odour of fermented juice fills the air, and the infested canes are entirely useless for sugar. The evil acts very quickly. In the West Indian islands whole fields have been completely destroyed by it.

The infection of the fungus can be carried by the air, but it seems likely that water, either flowing from infected fields or into which diseased canes and refuse have been thrown, is the chief agent for its diffusion. The water-logged condition of the ground, the lack of rotation, and the consequent exhaustion of the soil, are among other contributing causes.

A number of interesting results bearing upon defects in the present methods of sugar-cane cultivation have been obtained at the Samalkot farm by employing different manures, growing different varieties and raising selected canes under different systems. These are detailed in G O No 1020, Revenue, dated 14th September 1904, pp 20 ff. The chief conclusions arrived at are briefly (1) that it is important to tread in the cuttings properly, (2) that they should be planted in rows so as to facilitate weeding, supervision and irrigation, (3) that they are best put out in trenches, (4) that the use of a rake to supplement two thorough weedings with the *tolika* would be easier and much less expensive than the use of the *tolika* throughout, (5) that green dressing is good, but that the plants usually employed by the ryots are leguminous and suffer from insect and other pests, and (6) that the use of cane trash as a mulch in the first instance and its burial in the fields after the canals are reopened has several advantages.

Other matters are under investigation, among them the best number of cuttings per acre, the quantity of water required, the abolition of the expensive bamboo supports, the advantages of ratooning, and the improvement of the methods of making jaggery.

The commonest dry crops are gingelly (*nugu* or *nuvu*), cholam (*jonna*), horse-gram (*ulava*) ragi (*isodi*), green gram (*pesara*), sunn hemp (*janumu*), castor (*amuda*), cambu (*gante*), black gram (*minumu*), tobacco (*pogaku*), and Bengal gram (*salaga* or *sanaga*). Gingelly, horse-gram and ragi are most widely grown in Peddápúram and Rajahmundry. Cholam is chiefly raised in Bhadráchalam in the Agency, in all the upland taluks and in Amalápuram in the delta. Castor is popular in Pólavaram, cambu in Peddápúram, Bengal gram in Amalápuram, Peddápúram and Ramachandrapuram, and sunn hemp in Amalápuram, Nagaram and Cocanada. Tobacco grows best in the Gódavari lankas and in Yellavaram.

The two seasons of dry cultivation are known respectively as the *tolakari* or *pundsa panta* and the *sitakattu* or *payiru panta*. The former begins any time between May and July inclusive, and the latter between the beginning of September and the middle of December. With local exceptions, ragi, gingelly and cambu are grown in the first season, and horse-gram,

cholam, castor, and black, green and Bengal gram in the second. No regular rotations are observed. In Bhadrachalam the ryots say vaguely that they vary the crop when it begins to fail for want of a change. In Peddapuram, Tuni, Amalapuram and Pólavaram they profess to change the crop every year and say that castor and Bengal gram require intervals of three and seven years respectively before they are repeated on the same land.

The place of rotation is to some extent taken by mixing the crops, a system which is usual everywhere. Typical and common combinations are horse-gram or black gram with ragi, dhal with ragi, samai or gingelly, black gram and beans (*anumulu*) with cholam, and cambu with samai or korra. The principal advantage of the system is that it economises space, a small or slow-growing crop being raised in the intervals between spreading or quickly-maturing plants.

In the delta and the Agency, manuring is rare, but it is frequent elsewhere. Ragi, tobacco and gingelly are thought to require it more than other crops. Fields are ploughed from four to six times, but twice is considered enough for horse-gram. Tobacco and onions seem to be always transplanted and cambu and ragi generally so. The seedlings are laid in a furrow and covered by ploughing another furrow alongside the first. Most of the other dry crops are sown broadcast, but castor and Bengal gram are sown seed by seed in a furrow, and in places a drill is used. The seed is covered by dragging a leafy branch across the field or ploughing again. Weeding of any kind appears to be the exception.

There appear to be four kinds of cholam in this district (namely two varieties (the *mudda* and the *ralla*) of yellow (*pacha*) cholam, white cholam (*tella jonna* or *man jonna*), and 'hill cholam' (*konda jonna*). The white variety is peculiar to Bhadrachalam and the 'hill cholam' to *podu* cultivation. Yellow cholam is generally sown mixed with green gram. The seed is covered as usual. Six or eight weeks afterwards the field is lightly ploughed, which is believed to strengthen the young plants. In Pólavaram the ryots first weed the crop and loosen the soil with a *gorru*, a log of wood provided with iron or wooden teeth, which is drawn by bullocks. The crop is sown in October or November and is on the ground for three or four months.

There are two varieties of tobacco—lanka and pati. The former, which is much the superior, is grown on the alluvial soils of the lankas and banks of the Gódavari, which require no manure owing to their being covered with silt by the river.

every year. The latter is raised in fields near the villages. The crop is always transplanted. The seed is sown in seed-beds in the *pubba kárti* (first half of September) and transplantation takes place after the *uttara kárti* (at the end of that month), when the floods in the river have subsided, and sometimes as late as December. Great care is taken in the preparation of the seed-beds, the land being ploughed many times and plentifully manured with cattle-dung and ashes. Sheep dung is usually considered hot and injurious, but is employed in Nagaram. Before sowing, the seed is mixed in the proportion of one to sixteen with sand, so as to enable it to be thinly scattered. It is sometimes soaked and kept for four or five days (like paddy) in a damp place until it germinates. The seed-bed is kept moist by daily (or even more frequent) sprinklings of water, and is also weeded almost daily. When the seedlings are from one and a half to two and a half months old they are transplanted at intervals from half a yard to a yard apart. They are frequently watered for three or four weeks, but not after that. The plants blossom in some six or eight weeks, and then their buds and tops are cut off to strengthen the eight or ten leaves which remain. All lateral shoots are also cut off from time to time and so, at length, are the bottom two or three of the eight or ten leaves.

The crop is on the ground for five and a half months from the time it is sown. It is harvested at midday, and the leaves are left in the sun for two hours and then hung from strings in the shade for a fortnight. They are next pressed under weights for a month, after which water is sprinkled on them and they are fit for use.

Attempts are being made to improve the quality of the tobacco grown in the district. Messrs T H Barry & Co of Cocanada have established a tobacco factory in that town and foreign seed has been imported by Government for experimental cultivation in the lankas leased to Mr T H Barry. The chief defect of the existing tobacco is the excessive thickness and dark colour of the leaf. It is sold in other parts of India and Burma and, to a limited extent, in Mauritius, Bourbon and London.

<sup>n</sup> The majority of the hill Reddis and the Kóyas in the Agency carry on shifting cultivation, called *pódu*, by burning clearings in the forests. The conflict between their interests and those of forest reservation are referred to in Chapter V. Two methods prevail: the ordinary (or *chalaka*) *pódu*, and the hill (or *konda*) *pódu*. The former consists in cultivating certain recognized clearings for a year or two at a time,

allowing the forest to grow again for a few years, and then again burning and cultivating them, while under the latter the clearing is not returned to for a much longer period and is sometimes deserted for ever. The latter is in fashion in the more hilly and wilder parts, while the former is a step towards civilization.

In February or March the jungle trees and bushes are cut down and spread evenly over the portion to be cultivated, and, when the hot weather comes on, they are burnt. The ashes act as a manure, and the cultivators also think that the mere heat of the burning makes the ground productive. The land is ploughed once or twice in *chalaka pódus* before and after sowing, but not at all in *konda pódus*. The seed is sown in June in the *mrigasíra kárti*. Hill cholam and sámái are the commonest crops. The former is dibbled into the ground.

Grain is usually stored in regular granaries (*kottu*) or in thatched bamboo receptacles built on a raised foundation and called *gádi*. These are not found in Bhadráchalam or the central delta, where the *purí* (a high, round receptacle made of twisted straw) is used. Grain is also stored, as elsewhere, in pits.

The chief irrigation source of the district is the Godavari, the channels from which protect 240,800 acres in all seasons. Some 4,600 acres of this are in Rajahmundry, and the rest in the delta taluks of Rámachandrapuram, Cocanada, Amalápuram and Nagaram. Tanks and channels from smaller rivers safeguard 31,800 acres in all seasons and 53,800 acres in ordinary seasons. Wells irrigate a very small area. Only in Amalápuram taluk does the extent protected by them rise above 100 acres.

The Gódavari water is rendered available by the great anicut at Dowlaishweram and the immense system of canals and channels leading off from it. Those in this district are shown in the accompanying map, and there are yet others in Kistna.

This anicut was the first of any real magnitude to be built by Europeans in this Presidency (the Cauvery system was an elaboration of native enterprise) and is one of the greatest triumphs of engineering skill in all India. Its history is of the greatest interest. Not only were the physical difficulties encountered in damming up so huge a river enormous, but the opposition of those who doubted the possibility and financial prospects of the work had to be overcome. Both were met by the engineers in charge of the project with indomitable perseverance and fortitude.

The project consists of a dam across the Gódávári at Dowlaishweram (where the river is nearly four miles wide) and a net work of canals covering almost every part of the delta<sup>1</sup> Some of these canals are navigable, and the traffic along them is referred to in Chapter VII. The conception of the scheme was due to the genius of Sir Arthur Cotton. The idea of an anicut across the river originated<sup>2</sup> as far back as 1789 with Mr Topping, an astronomer in the service of the Madras Government who was appointed to survey the coast of the district in that year. It was revived in 1844 by Sir Henry Montgomery,<sup>3</sup> who had been appointed (see p 167) Special Commissioner to report on the best means of improving the then unhappy condition of the district. As a result of his recommendations, Sir Arthur (then Captain) Cotton of the Madras Engineers was ordered in 1845 to report professionally on the possibility of building an anicut on the river. He pronounced in favour of the idea, his representations were earnestly backed by the then Governor of Madras, the Marquis of Tweeddale, and the Court of Directors, in a despatch dated December 23rd, 1846, sanctioned the project.

Sir Arthur Cotton's first idea had been to build a dam above Rajahmundry similar to the two anicuts on the Coleroon which had been recently constructed under his supervision. But he eventually recommended that the work should be constructed just below Dowlaishweram, at the head of the delta. The breadth of the river was much greater there than above Rajahmundry, but a great portion of the width was occupied by islands, and the site had the great advantage of being close to a hill of coarse, strong sandstone 'of a degree of hardness exactly suited to the case, neither too hard to be expensive in working nor yet soft enough to be unfit for the purpose'. Round this hill, also, lay several hundred thousand tons of broken stone, the accumulations of years of native quarryings, which would be of great value for rubble work. The cost of constructing the anicut itself Sir Arthur estimated at only 4¾ lakhs, and that of the subsidiary works as 7¼ lakhs, or only twelve lakhs in all. At the same time he indulged in the most sanguine hopes of increased irrigation and revenue, and of a rich return upon this 'absurdly small' sum. It will be seen immediately that he very greatly under-estimated the cost of both dam and project.

<sup>1</sup> The following brief sketch has been for the most part abstracted from the graphic account in *The Engineering works of the Gódávári delta*, by Mr G T Welch, late Chief Engineer for Irrigation, Madras, published by the Government Press in 1896.

<sup>2</sup> First report of the Public Works Commission at Madras, 1852, p 100.

<sup>3</sup> His report dated 18th March 1844, para 40.

The breadth of the Gódavari at the point selected for the dam is rather over  $3\frac{1}{2}$  miles, but of this more than a third is occupied by three islands and the head of the central delta, which separate the river into four channels. About a mile from the Dowlaishweram (or eastern) bank of the river is the island known as the Pichika-lanka, nearly 800 yards broad, the branches flowing on either side of which are known as the Dowlaishweram and Rali branches respectively. Next beyond the Rali branch comes the head of the central delta, known as the Bobbarlanka, which is about 470 yards wide. Then comes a narrow channel called the Maddur branch, next the Maddur lanka, about 630 yards broad, and, lastly, the fourth, or Vijésvaram, branch of the river. The lengths of the sections of the dam over each of the four branches, exclusive of under-sluices and wings, were as given in the margin. It will be

	Yards	seen that the total length of
Dowlaishweram branch	1 646	the work was about 4,000
Rali branch	953	yards. It was intended to be
Maddur branch	516	12 feet high and connected
Vijésvaram branch	866	with embankments on the

different islands 2,455 yards in length

The river bed was of pure sand and the islands were thin alluvial deposits thereon, while floods upwards of 25 feet in depth swept one and a half millions of cubic feet of water past the place every second. The problem how to bring the river under the necessary control at such a site was thus no easy one.

The actual design of the dam was modified more than once, and none of the sections across the various branches is precisely similar to any other. The original plans provided for a narrow crest with a vertical drop for the water on to a cut-stone floor behind, the section being very similar to that of the Upper Anicut on the Coleroon. Before work began, however, Sir Arthur adopted a very different design with a broad crest and a long sloping apron behind it of rubble masonry covered with cut-stone. The great advantage of this was that it required much less cut-stone work, for skilled masons were exceedingly scarce. It was not adhered to universally, different modifications being introduced in each of the four sections, but the general principle of a long rough-stone apron was retained in all. This had a very serious drawback, the full effect of which its designer did not first appreciate. Water rushing down such a sloping apron sets up reverse under-currents which tend to scour holes in the river bed and so undermine the foundation of the work. It was soon found that a further extension of the apron by a long

- V rough-stone talus was necessary, and at the present time it is from three to six times as wide as it originally was, and  
 1 its thickness has been greatly increased by the enormous quantities of stone thrown in to make good the sinkage which has from time to time taken place. In the first twenty years of the anicut's existence over 500,000 tons of stone were used for this purpose, and vast quantities more have been used since. Nowadays very little is required, and that only at certain places.

Another considerable change in the original design was the adoption of the plan of founding the anicut on the sand confined between its face wall and the retaining wall at the toe of the apron, instead of upon a mass of loosely deposited stone. The Ráli branch alone was constructed on the latter method and its foundations were the only ones which gave any trouble. They allowed the water to pass through in great quantities.

Three sets of under-slucers of fifteen vents each were built, one near the head-slucers of each of the main canals of the three sections of the delta. Three locks were also built, one at the head of each of those canals. Three head-slucers were also ultimately necessary.

The sanction of the Court of Directors to the execution of the work was received early in 1847. In April of that year operations were vigorously commenced. A detachment of Sappers and Miners was posted to Dowlaishweram, and a Sub-Collector (Mr H Forbes) was appointed to superintend the recruitment and payment of labourers and to procure the necessary supplies. His exertions (it may here be noted) were more than once acknowledged to have contributed largely to the success of the work (Sir Arthur said 'his vigorous and active measures have roused this district to a degree that could not have been expected') and he was specially thanked in the Government order reviewing the completion of the project. Before July had arrived, as many as 10,200 labourers, 500 carpenters and the same number of smiths had been collected to put in hand preliminary preparations. Boats were built, railway waggons constructed, the quarry opened and two double lines of rail ran from it to different points on the river banks, and the embankments on the islands put in hand.

In the working season of 1848 the actual construction of the dam was begun, and the Dowlaishweram and Maddur sections were both built to the height of nine feet, and good deal of work was also done to the Dowlaishweram and Vjésvaram sluices. In the middle of 1848 Sir Arthur Cotton

had to go Home on leave 'exhausted by unremitting work and anxiety', and for the next two years his place was taken by Captain (afterwards General) C. A. Orr, R.E., who had from the first been his most successful lieutenant and to whom much of the credit for the completion of the undertaking is due

Next year (1849) the whole of the Vijésvaram section was built to a height of nine feet under circumstances of great difficulty. The work could not be begun until February 10th owing to want of funds. During its progress a sudden rise in the river breached it, and extensive temporary dams had to be erected to turn the river away from it. It was completed by the end of May. The season's operations also included the repair of 80 yards of the Maddur section, the raising of the whole section by one and a half feet, the completion of the head and under-sluiques and locks both at Dowlaishweram and Vijésvaram, of the under-sluique and wing walls of the Ráli section and of about 50 yards at each end of this section, and the lengthening of the Dowlaishweram section by some 250 yards.

At the beginning of the following year (1850) the only outlet for the whole stream of the Gódávari was down the Ráli branch, the section across which alone remained to be completed. A temporary dam of loose stone had been made across this in 1848 and strengthened in 1849 to prevent the stream from cutting too deep a channel in the bed of the river, but the water escaped both through and over this, and it became necessary to make it water-tight and high enough to turn the stream down the Dowlaishweram and Vijésvaram branches, and through the head and under-sluiques in them. This would have been no easy matter at any time, but now considerably more water than usual was passing down owing to heavy rain in Hyderabad and Nagpore.

An exciting struggle with the river ensued. In February about 50 yards of the temporary dam was swept away, and no sooner was the damage repaired than 80 yards more was washed down stream. This branch was nearly closed when the river asserted itself and widened it to 80 yards again, surging through the narrow opening between 20 and 30 feet deep. With immense difficulty this breach was at length closed and the river turned aside on the 23rd April, and before the end of the next month the Ráli section was completed to a height of 10½ feet. The head-sluique and lock on this section were built the same year, and the great anicut was thus at last an accomplished fact.

Though the battle was now won, the difficulties were far from over. On the 9th June 1850 the river began to rise

steadily. It was passed through the Dowlaishwesam and Ráhi under-slucices, but the apron behind the latter was only 25 feet wide, and on the 17th June it began to sink. The sluices were closed and an attempt was made to replace the apron, when suddenly the great head of water forced the sand from beneath the foundation of the sluices into the hollow formed by the sinking of the apron, and a portion of the sluices fell in. Seven out of fourteen piers collapsed, but fortunately the massive masonry formed a dam preventing any great rush of water and gave time for measures to be taken to check the extension of the damage.

In the working season of 1851 and the early part of 1852 these under-slucices were rebuilt and the finishing touches were put to the anicut and head-works. Their virtual completion may be considered to have been achieved by March 31st, 1852.

Large repairs and alterations in the dam have been carried out since its first construction. The constant additions to the rough-stone aprons have already been alluded to, and another important improvement has been the raising of the crest of the work. Even before it was finished in 1852, its height was found insufficient to secure an adequate supply of water to the canals at all seasons, and cast-iron grooved posts, fitted with horizontal planks to hold up when necessary an additional two feet of water, were fixed along its crest. This was still insufficient, and between 1862 and 1867 the masonry itself was raised two feet at a cost of nearly three lakhs, and the iron posts and planks were replaced on the top of the new work. In 1897-99 the crest was raised an additional nine inches with Portland cement concrete, and on this were fitted self-acting cast-iron shutters, two feet high, which fall automatically when the water rises to six inches above their tops.

The only serious accident to the anicut itself happened in 1857. On the 14th November of that year, when the season for floods was over and the water was comparatively low, the eastern end of the Maddúr branch suddenly subsided into a deep scour-hole below it, and a breach was formed through which the river poured with such depth and volume that it was impossible to stop it. The disaster was met by damming up the river (with great difficulty) some way above the anicut and then rebuilding the fallen portion. The operation cost half a lakh.

The three sets of head-locks, head-slucices and under-slucices, have all been altered or replaced at various times, and of the original constructions only one head-slucice and the three sets of under-slucices now survive. The original Vijésvaram head-lock was destroyed in the floods of 1852. It

was rebuilt next year, but was eventually converted into sluices, and the present head-lock was built in 1891. The original Vijésvaram head-sluices fell in 1853, were rebuilt in 1854, and are still in use. The central delta head-sluices fell in 1878 in a high flood, and great difficulty was experienced in preventing damage to the canal below. The head-lock beside them became so shaky that in 1889-90 it was replaced by a new one. Of the eastern delta works, the head-lock toppled over in 1886, when there was  $14\frac{1}{2}$  feet of water on the anicut. It carried the lock gates with it and left a gap into the canal fifteen feet wide, through which the water poured. The river continued to rise, and in two days reached the then unprecedented height of 17 feet above the anicut, so that the breach was only stopped with great difficulty. A new lock in a rather better position was built next year and opened on Jubilee day.

A gradually increasing shoal which has been forming on the left side of the Gódávarí river above the Dowláshweram branch of the anicut has been for some time past a source of anxiety and of inconvenience to navigation. The old Dowláshweram under-sluices not being sufficiently powerful to arrest the progress of this shoal towards the head-sluice, it was considered necessary to build more powerful substitutes for them. An estimate was sanctioned in 1903 and the work is now in progress. The new under-sluices are to consist of ten vents 20 feet wide and 10 feet high, regulated by iron lift shutters and with their sill four feet below that of the head-sluice. The shutters are to be in two tiers—the upper measuring 20 feet by 6 feet and the lower 20 feet by 4 feet—are to be constructed of half inch plates stiffened with rolled steel beams 12 feet by 6 feet, and are to be worked by chain gearing arrangements.

Simultaneously with the construction of the head-works, arrangements were made for carrying to the various parts of the delta the water they rendered available. Even before the building of the anicut, certain portions of the delta had been irrigated. Sir Henry Montgomery's report of 1846 already mentioned deplored the neglect with which the then existing channels had been treated, and Sir Arthur Cotton described them as partial works of small extent not kept in an effective state. They were merely inundation channels, the heads of which were 12 or 15 feet above the deep bed of the river, and they received a supply only during floods, or for about 50 days in the year. Some of them lay on the western side of the river in the present Kistna district, the central delta contained none worth mention, but on the eastern side of the river four

considerable channels were in existence. One of these, called the Tulya Bhāga, led off from near the site of the anicut and ran in a fairly straight line to Cocanada, terminating in the salt creek there. In 1846 a branch was taken from it to Samalkot from near Dowlaishweram. These two channels were connected with the head-works of the eastern delta.

At the end of 1849 a start was made with the new distributary works, sanction being obtained to the cutting of the main canals in the eastern and central deltas, the first of which (see the map) leads along the river bank nearly as far as Yanam and the second runs past Rāli. In April 1851 the western delta main canal (now in the Kistna district) was sanctioned, and in February 1852 considerable extensions of the eastern main canal and large distributary works in the central delta, including the great Gannavaram aqueduct, were agreed to.

This aqueduct carries a large canal across a branch of the Gódavari to the Nagaram island, which is surrounded by the sea and two arms of the river and to which water can only be taken in this way. The aqueduct may be roughly described as an arched bridge of brick thrown across the branch of the river, upon which, in the place where the roadway of an ordinary bridge is laid, runs a channel from 22 to 24 feet broad and some four feet deep. Its total length between abutments is 2,248 feet, and it consists of 49 arches with 40 feet waterway and 48 piers 6 feet thick. Ordinarily, the water of the branch of the river across which it is thrown flows through the arches of the aqueduct, but in times of high flood it completely submerges the whole work and pours over the top of it. It was impossible to make the aqueduct higher, because of the expense and danger involved in raising the embankments of the channels connected with it to a corresponding height above the level of the surrounding country. The work had therefore to be made of sufficient strength to resist floods sweeping over it.

The most noteworthy fact about the work is the wonderfully short period within which it was built. The estimate was submitted by Sir Arthur Cotton in August 1851 but was not sanctioned till February 14th 1852. It was considered of paramount importance to finish the work before the floods of that year came down, and, to effect this, extraordinary efforts were necessary. Between the first preparation of the materials for the work and the completion of all its 49 arches only four months elapsed, and in another four it was ready for its work. 'In any part of the world,' says Mr Walch in his book already cited, 'this would have been a noteworthy achievement, in an

out-of-the-way part of the Madras Presidency, where machinery was almost unobtainable and most of the skilled labour had to be trained as the work went on, it was an extraordinary feat' The construction was under the charge of Lieutenant (afterwards General) G T Haig, R.E., and his energy and skill are commended in the highest terms by Sir Arthur Cotton 'That a single officer with two or three overseers should have managed about 5,000 workmen, and with the help of only one or two efficient workmen, is one of the most surprising things I have met with Every time I visited the work I was astonished at the energy and admirable arrangement of this young officer I cannot say less than that I think him the most effective officer I have ever had attached to me I have never yet seen such energy displayed by any other man' It is, in truth, difficult to realize, as one views this imposing work, that it was actually completed in one working season

Money for further extensions of the distributary works was at first grudged by Government, who were sceptical of the prospects of the scheme and aghast at the enormous excess over the original estimates of expenditure which had been incurred 'The records teem with remonstrances from Colonel Cotton and with 'minutes,' 'notes' and letters by Governors, Members of Council, Boards and Secretaries, now wrathful and now pained more in sorrow than in anger, on the subject of the surprises which Colonel Cotton was springing on them in his demands for what they considered unexpected developments of the original scheme, or to cover expenditure incurred on work which had not been sanctioned or had been much altered or largely exceeded in execution On the one hand was the enthusiast whose genius and special knowledge enabled him to see clearly that what he proposed to do was in the best interests of Government as well as of the people, and who was impatient of delay, on the other hand were the controlling powers who held the purse strings and whose duty it was to check too hurried an advance along a path the issue from which to them was obscure'<sup>1</sup> It was not till 1853 that the success of the project became so apparent that funds were granted readily for its development From that time onwards the canals and channels were rapidly pushed forward At the present time there are in the Gódvári district (not counting the works in Kistna, on the western bank of the river) 287 miles of canal (nearly all of which are navigable) and 1,047 miles of distributaries

<sup>1</sup> Mr Walch, *op cit*, p 89.

The total capital outlay on the whole scheme up to the end of 1904-05 is returned as Rs 1,36,93,000, the gross receipts of that year at Rs 35,58,000, the annual working expenses at Rs 9,10,000, and the net revenue at Rs 26,48,000 or 19·34 per cent on the capital outlay. The benefits and increase of wealth which the project has conferred upon the people of the district are incalculable. The misery it has prevented may be gauged from a perusal of Chapter VIII below, where the ghastly sufferings from famine which the people endured before its construction are faintly indicated.

Mr Walch considers that 'it may be assumed that there is land available for an extension of irrigation of at least 100,000 acres, exclusive of the considerable areas in the Coringa and Pólarum islands, to both of which anicut water could be taken without any very serious engineering difficulty, to the former by a tunnel or articulated pipes and to the latter by an aqueduct across the Vriddha Gautami'. Whether, however, sufficient water can be rendered available for any such extension is another matter. For some three months in every year vastly more water comes down the river than is required for the area at present irrigated, and this excess pours uselessly over the anicut and down to the sea. But in almost every season the period of superabundance is followed by one of scarcity, the water barely sufficing for the present area of wet crops. Either therefore the 'duty' of the water must be increased (no easy matter) or some method of storage must be resorted to. It has been suggested<sup>1</sup> that reservoirs might perhaps be formed on the Saveri or one of its larger tributaries.

The administration of the irrigation works of the central and eastern deltas in this district involves the maintenance of a large establishment. An Executive Engineer and two Assistant Engineers are in charge of them exclusively, the rest of the district being administered by another Executive Engineer with an Assistant Engineer subordinate to him, and under their orders are the anicut superintendent and sub-overseers, who supervise the distribution of the water, the conservancy establishment in charge of the locks and river embankments, and the navigation establishment referred to in Chapter VII. A new division for the conservancy of the river bed is being organized.

The embankments give much trouble in times of high freshets, and the country is not yet adequately protected from the effects of abnormal floods. In 1886, 1892 and 1900 the

<sup>1</sup> Mr H E Clerk's *Preliminary Report for the Irrigation Commission* (1902), 3, 50

embankments breached and serious inundations were caused. Most of them have been raised since 1900. Drainage, though not so burning a question as in the Tanjore delta, is a matter of great difficulty near the coast, where the fall of the land is very gradual. Large tracts there are liable to be flooded by a heavy north-east monsoon.

As above remarked, the district contains 31,800 acres protected in all seasons by minor channels and tanks, and 53,800 acres safeguarded in ordinary seasons. Of this extent, the greater part lies in Rajahmundry (20,300 and 27,300 acres respectively) and Peddápúram (18,400 acres in ordinary seasons). In Polavaram, Cocanada and Bhadráchalām only 2,800 acres, 1,300 acres and 100 acres respectively are protected by these sources in all seasons, and in ordinary seasons 2,800 acres in Yellavaram, 100 acres in Chódavaram and an additional 1,700 acres in Pólavaram. Tanks occur in all these tracts. The largest in the district is at Lingamparti in Peddápúram taluk, which irrigates 4,686 acres. Other considerable reservoirs are the Kottapalli tank (970 acres), the Kápavaram tank (823 acres), and the Ganapavaram tank (686 acres), all in Rajahmundry. The only considerable minor channels are those from the Yelérú which irrigate some 8,000 acres in Peddápúram taluk and a further extent in the Pithápúram zamindari. A small area in Peddapuram is also irrigated from the Ravutalapúdi stream.

Irrigation from wells is very rare in the uplands and the Agency, and the only taluk in the district in which over 100 acres is so watered is Amalápúram. Cheap temporary wells are sunk in small numbers in parts of Peddapuram, Tunī, Cocanada and Rámachandrapuram. In the two latter they are only used for about two months in each year, average 12 feet in depth, and hold some six feet of water. In Cocanada they are called *doruvu* wells. In Tunī they last much longer and more labour is expended on them. On the Yalesvaram river shallow wells are dug which last for five or six years. It is only in Nagaram and Amalápúram taluks that permanent revetted wells are found. They are very large, from 18 to 24 feet deep, hold from six to twelve feet of water, are revetted with bricks and are said to be very ancient. They are sometimes called 'Jain' wells, and are supposed to date from the days when the Jain faith prevailed in the country,<sup>1</sup> in Amalápúram they are sometimes called 'Reddis' wells. They are largely used for the irrigation of areca and cocoanut palm plantations, and the supply in them is said to be practically perennial. The ordinary water-lift employed in the

<sup>1</sup> See Chapter III, p. 39.

IV central delta is the *kapila* or *mōtu* worked by bullocks, but  
 2 the picottah (called *tokkudu yētham*) is usual elsewhere  
 ON  
 8

A peculiarity of the district is its artesian wells. The existence of an artesian supply was accidentally discovered while digging an ordinary well in the railway-station compound at Samalkot in 1892-93, the water being encountered at a depth of about eighty feet. Since then several other artesian wells have been sunk, namely, a second in the station compound, two in 1904 in the sugar refinery at the same place (water being reached at some 110 feet), and a fifth in the railway-station yard at Cocanada Port, where the water was nearly 300 feet below ground level. Artesian water has also been found on the Pólavaram and Yernagudem border during the recent explorations for coal in that neighbourhood but borings at Pithápuram have been unsuccessful.

In the zamindaris the ryots have usually no admitted occupancy right. They pay money rents fixed each year. In the Agency, the tenants of the muttadars are apparently protected from rack-renting and eviction by the scarcity of cultivators and the consequent desire of each landholder to keep those he has.

In Government land, fields are frequently sub-let by the pattadars, the consideration being either a share of the actual crop (*samgōru*) or, much more commonly, a fixed payment in money or grain called *sist*.

The sharing system seems to be chiefly restricted to inferior wet land, and under it the crop is everywhere divided equally between the landholder and the tenant. The latter usually finds the seed, the cattle and the labour, but in Bhadrachalam a landholder will often let his permanent farm-servants cultivate a piece of his land with his cattle and seed on condition of receiving half the crop resulting.

Fixed rents are only paid in grain in the case of wet land. Grain rents are usually rather lower than money rents, as there is less chance of evading payment of them. The tenant, as before, finds seed, cattle and labour, but in Pithapuram a variant called the backyard (*peradu*) system prevails under which the landholder lends the cattle. Agricultural labourers are either farm-servants engaged by the year (*pálikápu*) or coolies hired by the day or job. The former usually engage themselves for the whole year to some landholder, who then has the exclusive right to their services. Accounts are settled, and fresh engagements made, on the eleventh day of the bright fortnight of the month Ashádha (July-August), which is well known throughout the district under the name of 'the initial ékádasi' (*tolé ékádasi*). Then, as the proverb significantly

says, 'the *pālikāpus* are companions to their master's sons-in-law,' they remind him of his petty tyrannies during the past year and haggle over the renewal of their agreements

The rates of wages for *pālikāpus*, which are always fixed by the year and (except in Bhadrāchalam) in paddy, vary, when commuted into money at the usual rate of 10 kunchams per rupee, from Rs 24 (or one anna a day) in Pōlavaram to Rs 60 (two annas, eight pies a day) in Peddāpuram, Pithāpuram, Rajahmundry and Rāmachandrapuram. These labourers are also given a small varying quantity of straw and unthreshed paddy at the end of the year, a new cloth, some tobacco and a palmyra tree, or, if the master has no palmyras, a gift of one rupee. They also get advances of their wages free of interest. In Amalāpuram various different customs prevail. These rates of wages are said to have increased by one-third or one-half in the last ten or fifteen years. Payment is usually made at the end of the year.

The day labourer is paid from two to four annas a day, women getting half these rates. The rates of wages were only about half these sums a few years ago. Labour, however, is not really scarce. The great immigration from Vizagapatam (p 38) has done much to supplement it, and there is no 'labour problem' as in some places, the Tanjore delta for example. The rates of interest on loans are much the same as usual, 12 to 24 per cent being common. Loans are often made on the security of standing crops on the condition that they shall be sold to the sowcar at less than the market price, an arrangement which is known as the *jāthi* system.

---

## CHAPTER V

## FORESTS

EARLY OPERATIONS—Progress of reservation. SETTLEMENT—Proprietary rights—Susceptibilities of the jungle tribes—*Pods* cultivation. ADMINISTRATION—In Rampa—in the rest of the Agency—River transit rules—Fire protection—Artificial reproduction *casuarina*—Mangrove—Introduction of exotics, etc. GENERAL CHARACTER OF THE FORESTS—On the coast—in the uplands—in Pólavaram and Yellavaram—in Rampa—in Bhadráchalam—Timber and the market for it—Minor forest produce—Forest revenue

THE best forests in the district are those in the Agency, and trade in their timber, facilitated as it is by the waterway provided by the Gódávārī river, has flourished from the earliest times. The Committee of Circuit (see p. 162) refer to it as far back as 1786 and it was still in existence when the Government recently began forest conservancy. The Bhadráchalam and Rékapalle country was the chief centre. Dealers from the plains employed the Kóyas and hill Reddis to cut timber at so much a log, or bamboos at so much a thousand, and to drag them to the riverside, where they were made into rafts and floated down stream<sup>1</sup> to the markets nearer the coast.

Forest conservancy was first begun in the Bhadráchalam taluk, which was transferred to the district from the Central Provinces in 1874. Soon after the transfer, the Madras Government threw open its forests to exploitation on the permit system, and annually netted a very fair revenue from them.<sup>2</sup> In 1876-77 reserves amounting to 138 square miles (subsequently reduced to 68 square miles) were selected in the taluk by Mr. Boileau, the Deputy Conservator of Forests who had been sent to the district for the purpose, but the hill tribes were permitted to cut whatever wood they chose for their own use, and complaints were frequently made that they sold timber and other produce to outside dealers. Although only four guards were sanctioned for the protection of these reserves, yet the average annual revenue between 1874 and 1882 was Rs. 21,000, while the expenditure averaged only Rs. 3,800. In the latter of these two years Mr. Boileau reported very unfavourably on the condition of the forests, and Dr. (afterwards Sir Dietrich) Brandis, who was then

<sup>1</sup> B.P. No. 1992 (Forest No. 372), dated 7th July 1885, p. 11

<sup>2</sup> B.P. Forest No. 222, dated 30th July 1902.

in Madras advising the Government regarding its future forest policy, recommended that conservancy in this taluk should be abandoned unless Government was prepared to introduce the Forest Act and to sanction the reservation of large compact blocks, capable of subsequent extension, and stated that it was the unanimous opinion of the local officers that grazing, fires, indiscriminate cutting and the clearings made by the hill men for their shifting cultivation were ruining the forests

The Government accordingly directed Mr J S Gamble, the Conservator of the Northern Division, to inspect the taluk and report on Sir Dietrich Brandis' proposals, and his detailed account of the forests<sup>1</sup> finally dispelled any doubt as to their importance. Mr Gamble rearranged Mr Boileau's reserves and proposed new ones which brought up the forest area to 530 square miles. Most of this tract was notified under the Forest Act between 1889 and 1891, but the large Rékapalle hills reserve of 93,500 acres was not notified till 1896.

Reservation was soon begun in other taluks also. By 1893 large areas had been notified in the Peddápuram taluk and Yellavaram division, but the major portion of the large Pólavaram forests were not reserved till 1899 and it was not until 1901 that the forests of the district as a whole attained their present proportions.

The marginal figures show in square miles the area of the reserves and reserved land in each taluk or division and in the district as a whole. They do not include Rampa, which though containing large areas of jungle, has for political reasons been excluded from the operations, and yet it will

be noticed that 737 square miles of the total of 942 square miles is situated in the agency divisions.

The rights of Government over the forests in the Agency have been established in different ways in different tracts. In Rampa, the muttadars at one time claimed the right to lease out the forests, and large quantities of timber were removed by the lessees they appointed. But it was eventually ruled that Government stood in the exact place of the former mansabdar of Rampa and that consequently neither the muttadars nor the mokhásadars had any right to lease out the jungle or fell timber for sale, and that the Rampa forests were

<sup>1</sup> Printed in B.P. No. 1992 (Forest No. 372), dated 7th July 1885.

the property of the State.<sup>1</sup> As however these subordinate proprietors had hitherto been enjoying a considerable forest revenue of which it seemed harsh to deprive them absolutely, it was resolved in December 1892 to pay them an annual allowance amounting to half the net average of this revenue during the previous three years, on the understanding that they would assist Government in the future administration of the forest. In the Yellavaram and Pólavaram divisions, no such difficulty occurred in settling the rights of proprietors.

In the Bhadráchalam taluk the Government of the Central Provinces had adopted, in their permanent settlement with the zamindars, a policy regarding forests which differs from that traditional in this Presidency. The forests and waste lands in zamindari estates were not handed over to the zamindars, but, after a liberal deduction from them (called the *dupati* land) had been made round each village to allow for the possible extension of cultivation, were declared to be State property.<sup>2</sup>

Reservation was complicated not only by claims to the proprietary ownership of the forests, but also by the unusual habits and susceptibilities of the hill tribes who dwelt among them. These people, though possessing few sustainable rights over the jungle, had from time immemorial enjoyed and abused a general freedom to fell or burn whatever growth they chose. The Kóyas and hill Reddis lived in villages situated on the borders of, and even within, the proposed reserves, and for political reasons great care was considered necessary in dealing with them. Dissatisfaction with the new forest rules in Rékapalle was apparently the reason which had led the Kóyas of that taluk to join in the Rampa rebellion of 1879.

Both the Kóyas and the Reddis lived by the shifting (*pódu*) cultivation described in the last chapter (p. 78), making clearings in the heart of the forest by felling and burning the trees, cultivating them for a year or two until their first fertility was exhausted, and then moving on to new ground. Not only were acres of valuable forest thus felled, but the fires lit for burning these patches spread over enormous areas. On the other hand, reservation, to be thorough, necessitated the exclusion of this class of cultivation from the reserved blocks and meant a considerable curtailment of the old privileges of the hill men, who had been accustomed to wander and burn wherever they liked.

<sup>1</sup> See B P Forest No 128, dated 6th March 1890 and G O No 1280, Revenue, dated 21st December 1892.

<sup>2</sup> See Chapter XI, p. 176.

In the earlier stages of the forest settlement in Pólavaram and Yellavaram the officers in charge of the Agency held that reservation had been too wholesale and that the allowance of jungle left in the neighbourhood of villages to provide for the extension or rotation of cultivation and for the supply of timber for implements and other domestic purposes was inadequate. Mr (now Sir A. T.) Arundel, then a Member of the Board of Revenue, consequently visited the district in October 1893 and enquired into the matter on the spot. He came to the conclusion that the habits of the hill men had not received adequate consideration, and it was accordingly ordered that the Assistant Agent and the District Forest Officer should personally investigate the complaints and see that equitable claims were satisfied. Without laying down hard-and-fast rules it was indicated that *pódus* which had long been abandoned and were covered with jungle need not necessarily be excluded from reservation, but that well-recognized *pódus* should be excluded and handed over to the cultivators, and that for the rotation and extension of cultivation a sufficient extent (eight times the existing area annually under cultivation as a maximum) should be set aside.

In Bhadráchalam the settlement was completed without controversy. The hill men of that taluk had long been accustomed to the idea of reservation and considerable leniency was shown in the provision of areas for cultivation. It is however only in the last few years that *podu* cultivation in the reserves there has been completely stopped.

In Rampa the scene of a violent rebellion as recently as 1879, it was considered better not to run any risk of arousing discontent by attempts at reservation, and the forests there were never demarcated at all. They are still administered on a system different from that followed in the rest of the district.

The susceptibilities of the hill men led to cautious systems of forest administration throughout the Agency, all orders being issued through the Agent or his Special Assistant, but in Rampa the methods adopted were quite distinct. The country was exempted from the operation of all but section 26 of Chapter III, and Chapters V, VII, IX and X of the Forest Act. These rendered it possible to regulate the cutting and transit of timber, and special rules were drawn up regarding those matters. The people were allowed to cut timber for their own use except tamarind, jack, *ippa*, soap-nut, gall-nut and mango trees, but any one desirous of exporting any wood had to take out a permit before doing so, to pay certain fees, and to cart it by one or other of certain prescribed routes,

along which inspection tánahs under the management of the Forest department were placed to check the exports with the permits. These regulations still remain in force.

Minor forest produce for their own use may be collected by the Rampa people free of all charge, but on any which is exported, seigniorage is levied generally at the weekly markets outside Rampa where the produce is brought for sale, and from the traders and not from the hill men. The same procedure is adopted in the case of minor produce brought out of the Yellavaram division.

The Rampa people are also allowed to graze their own cattle in the forest free. But owners of foreign cattle driven to Rampa to graze have to take out permits and pay fees,<sup>1</sup> and the cattle have to be produced for check at the tánah specified in the permit. In 1900-01 the forest revenue from all these sources amounted to Rs. 5,500, in 1901-02 to Rs. 9,400, in 1902-03 to Rs. 10,800, and in 1903-04 to Rs. 6,700.

In the Agency outside the Rampa country the forests are either wholly or partially reserved. In the latter, timber, as in Rampa, may be felled for agricultural and domestic purposes free, except that certain trees must not be touched. In Pólavaram nineteen species have been thus excepted, in Yellavaram fifteen, and in Bhadrachalam nine, while in this last taluk Kóyas and hill Reddis are allowed to fell any trees except teak and *Diospyros melanoxylon*. In unsurveyed villages any trees may be felled to prepare land for permanent cultivation and any except certain species (specified in each division) to clear it for *pódu*. In surveyed villages the rules usual elsewhere are in force.

Minor produce (except *rela* and *tangédu* bark, for which permits are required) may be gathered free for domestic use in this class of forests in Yellavaram, and in Bhadrachalam by Kóyas and hill Reddis. Seigniorage is collected, as in Rampa, at the weekly markets from the traders on any which is collected for export. In Pólavaram the revenue is collected on the permit system in both classes of forest.

The grazing rules differ in the different divisions of the Agency, but in all of them Kóyas and Reddis are allowed to graze their cattle free, and in all of them except Bhadrachalam (whither cattle are seldom driven on account of its remoteness

<sup>1</sup> This system was not instituted till 1899 when it was found that the hill mutiadas were levying fees of this kind without authority. See the correspondence in B. P. Forest Nos. 318 dated 28th July 1897 and 264, dated 22nd June 1899. For the subsequent raising of the fees see B. P. Forest Nos. 89, dated 1st March 1901 and 19, dated 28th January 1904.

foreign cattle are charged full rates. People other than Kóyas and Reddis are charged one-quarter the full rates in Bhadráchalam, one-half in Pólavaram and one anna a head in Yellavaram

The game rules are in force in the Párikonda hill (Bison hill) reserve of the Pólavaram division, in order to protect the bison there, which are rapidly disappearing. It is in contemplation to extend the rules in course of time to the adjoining Kopalli and Kovvada blocks

The Gódávarí (and, in a lesser degree, the Saveri) are important waterways for floating timber from forests belonging to other administrations, Native States, zamindars, and private individuals outside the district. But they also flow for many miles through the forests of this Collectorate, and this renders much care necessary to prevent them from being used for the illicit removal of timber from the forests of this district under the pretence that it comes from elsewhere. Inspection tánaahs have accordingly been established at which all timber floated down these rivers is checked. Timber brought from forests other than those in this district belonging to Government has to be covered by vouchers signed by the owners of the forests or responsible authorities, and the wood is checked with these

Fire-protection, always a difficult problem, is rendered doubly troublesome in the Agency owing to the prevalence of the habit of smoking and the existence of *pódu* cultivation close alongside the reserves. Formerly patrols used to be employed during the fire-season, but during the past two years the money allotted for fire-protection has been spent in inducing the hill folk themselves to co-operate in checking fires, annual rewards being granted to the people of villages the reserves next which escaped damage from this cause. Villages are allotted certain limits within which they are expected to check fires by cutting lines, appointing patrols, and observing and enforcing prohibitions against burning *pódus* within 100 yards of any forest boundary line, burning the grass under *ippa* trees to facilitate the collection of the flowers when they fall, and throwing down live cheroot ends. If within the limits thus fixed a fire occurs, the villagers concerned lose their reward. The plan has met with a fair measure of success

The only artificial reproduction of forests which has been attempted is in the casuarina plantations near the coast. Two large blocks of this tree exist, in which over 85 acres are annually planted up. In the Kandikuppa block, in which the rotation has been fixed at fifteen years, the planting is at

intervals of six feet by six, the object being to produce long, straight poles for the river protection works of the Public Works department. In the Bendamúrlanka block, where the rotation is ten years, the seedlings are put out at an interval of nine feet by nine. In both areas thinnings are made after the fifth year to admit light to induce increase in girth, and in both of them the method of reproduction employed is clear felling and replanting.

The artificial regeneration of the mangrove has been undertaken during the past three years in the Coringa reserve, a valuable swamp forest about twelve miles from the important fire wood market at Cocanada. Natural reproduction is hindered by the unsuitability of the ground under the trees, which, being raised year after year by silt, becomes hard and dry during the season (the north-east monsoon) when the seed falls, and allows the seed to be carried away by the tide before it can take root. The higher and drier portions give very little hope of ever being restocked with anything except inferior species of *ulla* (*Excacaria Agallocha*) which coppices freely. The mangrove itself gives poor result from coppicing, and consequently, in the lower and softer portions of the swamp, sowing and dibbling have been largely resorted to. The seed is sown broad cast wherever the sea recedes enough to leave the ground bare and the latter is soft enough for the seed to sink in, while where the surface is hard or permanently covered by water, the slower and more costly method of dibbling in the seed is followed. About 600 acres have been sown in three years at an average cost of twelve and a half annas per acre.

Experiments made with exotics and foreign varieties have not given satisfactory results. Log-wood plants raised from seed imported from Jamaica have been put down in the Coringa swamp forests in different localities, but without success. Attempts have also been made to re-stock elevated parts of the same marsh with dry-land species, but owing to want of rain the result was very disheartening. In the Pegha reserve in Bhadráchalām taluk some 25 acres were sown with teak seed from Coimbatore in August 1903, but a year later only 500 seedlings were to be found.

The character of the forests of the district naturally differs widely in different localities. Along the tidal creeks of the Gódávarī river near the coast runs a mangrove jungle which extends southwards from Coringa for a distance of about 35 miles with an average width of five miles. About one-third of this area belongs to zamindars and the rest to Government. The zamindari portion is mere scrub jungle, having been

repeatedly cut over, and much of it is a waste plain containing no growth whatever. The Government portion is the main source of the fuel-supply of Cocanada. The species found in this forest consist chiefly of four varieties of *Avicennias*, and of *Rhizophora*, *Ægiceras*, *Lumnitzera*, *Ceriops*, and other inferior trees. *Ceriops Candolleana* yields a bark ('gedara bark') which the villagers use for colouring fishing-nets. The barks of the other mangrove species, although said to be good tanning materials, are not used as such, probably because they contain a large percentage of colouring matter. The forest is useful only for the fuel it yields.

Mangrove wood is inferior as fuel to the ordinary upland jungle species, but *Lumnitzera racemosa* (though scarce) is extremely hard and burns excellently, and the *Ceriops* shrub burns even when green if the bark is removed. *Sonneratia apetala* (*kalingi*) is a soft wood which is useful in brick-kilns when newly cut, but rapidly rots. The worst fuel of all is the *tilla*, a pithy wood full of an acrid juice which smokes more than it burns.

Besides these natural jungles, the coast forests comprise the two large plantations of casuarina already mentioned, which yield firewood and poles or piles for the river-protection works of the Public Works department. The Kandikuppa plantation (532 acres in extent and only partially planted at present) lies on the coast about 30 miles from Cocanada and has direct water communication with that town. The Bendamurlanka block (470 acres in extent) is 30 miles further down the coast, and is nearly planted up, but has only indirect and tortuous water communication with Cocanada.

Proceeding northward from the coast, scattered blocks of forest are met with in the Rajahmundry and Peddápúram ranges. These chiefly contain wood fit only for fuel, though stunted specimens of timber-yielding trees are scattered here and there and provide small timber for building huts and so forth. Among these latter are *Terminalia tomentosa*, *Diospyros melanoxylon*, *Pterocarpus Marsupium*, *Anogeissus latifolia*, *Lagerstræmia parviflora*, *Adina cordifolia*, *Chloroxylon Swietenia*, *Lebioderopsis orbicularis*, *Soymida febrifuga*, and a sprinkling of young *Xylia dolabriformis* and some patches of bamboo.

The forests of Pólavaram and Yellavaram are of a better character. In Yellavaram there are 47 square miles of good forest in which fairly large timber (three to five feet in girth) is found, and some 96 square miles containing trees (one and half to three feet in girth) providing timber of a smaller kind. The principal timber species are the *Xylia*, *Terminalia*,

*Pterocarpus*, *Anogeissus*, *Chloroxylon*, *Lagerstræmia* and *Adina* already mentioned as occurring further south. In the Pólavaram division, besides the above, teak (which never occurs in Yellavaram) is also met with. It may be said generally, however, that although these forests contain large timber trees, these are usually either unsound or situated in inaccessible places. The bulk of the crop consists of small growth which, owing to its distance from a market, is valueless either as fuel or timber.

The chief fruit-trees are the tamarind, gall-nut and *ippa*, and these forests also contain a quantity of the thin kind of bamboo (*Dendrocalamus strictus*) which is largely used for sugar-cane props.

The Rampa forests, being unreserved, have been less studied than the others. They are in a worse condition than those of Yellavaram and Pólavaram, since unrestricted fellings are permitted for *pódu* cultivation, and their remoteness renders the extraction of any timber both difficult and costly. Small quantities are removed on permits by consumers on their borders, and the bamboos in them, which include quantities of both *Bambusa* and *Dendrocalamus*, are also utilized similarly.

The forests in Bhadráchalam may be divided into (1) the Rekapalle or *Xylia* range, (2) the Marrigudem or teak range, and (3) the Bhadráchalam range, of which three-quarters consists mainly of teak and one-quarter of *Hardwickia binata*. Besides these predominant and more valuable species, large quantities of other timber trees are found, among which are the *Terminava*, *Pterocarpus*, *Adina*, *Anogeissus* and *Lagerstræmia* already mentioned above, and likewise *Dalbergia latifolia* and *Terminallia Arjuna*. In the Bhadráchalam and Marrigudem ranges, the teak, *Xylia* and *Hardwickia* are either comparatively young or unsound, the best trees having been felled in past years. The same is true of the less valuable species.

The best forest left is that in the inaccessible Rékapalle hills. For this a working plan<sup>1</sup> has been recently framed. The examination of the growth made in connection with this showed that over a fifth (sometimes nearly one-half) of the crop consisted of *Xylia*, that *Hardwickia* was very rare, that, among the inferior timber trees *Lebedieropsis orbicularis* was prominent, and that the rest of the forest was mainly made up of the trees already mentioned as prevalent in this part of the district, together with *Albizzia odoratissima* and *A. procera*.

<sup>1</sup> See B.P., Forest No. 222, dated 30th July 1902.

The finest stock is found on the plateaus and in elevated situations generally, and the size of the trees increases as one goes northwards, but the growth along the western edge and near enclosures has greatly deteriorated from having been subjected to excessive *pōdu* cultivation. Great difficulty is experienced in putting the working plan into practice, owing to the difficulty in extracting the produce from the more remote parts of these hills.

At present the Bhadrāchalam forests give no large timber. Teak is rarely obtained in logs more than 30 inches in girth and 25 feet long, and even then is crooked, unsound, knotty and fibrous, and, except for boat-building, is unable to compete in the markets with Burma teak. That from Marrigudem, however, is prettily grained and suitable for furniture. *Terminalia tomentosa* (*nalla maddi*) is procurable in about the same sizes and is useful for building, *Dalbergia latifolia* (*iruguduchava*) is usually in shorter logs and is poor, unsound in the centre, and chiefly employed for furniture, and *Pterocarpus Marsupium* (*tyégisi*) is procurable from 10 to 15 feet in length and from 4 to 5 feet in girth and is much used for planking, ceiling-boards and the like.

The chief markets for timber are Rajahmundry and Cocanada. Of these, the first is much the more important, and the timber is taken thence to Cocanada, Bezwada, Masulipatam and Ellore, as well as to smaller dépôts at Narasapur, Amalāpuram and Ramachandrapuram.

The bulk of the marketable minor forest produce comes from the Rampa and Yellavaram forests, Bhadrāchalam and Pōlavaram producing very little. Tamarind, gall-nuts, *nux vomica*, honey, wax, soap-nut, *sikāy*, platter leaves and skins and horns are the chief items, and the bulk of the revenue under this head is derived from tamarind and gall-nuts. The chief markets are again at Rajahmundry and Cocanada, whence the produce is distributed to many parts of India, Ceylon and Europe. Large quantities of *nux vomica* and gall-nuts are sent to London and Hamburg, wax goes to London, Colombo, Calcutta and Bombay, horns to London and France, skins to Madras, and *sikāy* to Madras, Cuddalore and Tuticorin. Most of the other produce is consumed locally.

The total revenue from the forests of the district amounted in 1904-05 to nearly two lakhs, of which Rs. 56,000 were derived from the sale of bamboos, Rs. 43,000 from minor forest produce, Rs. 35,000 from timber, Rs. 27,000 from fire-wood and charcoal, and Rs. 16,000 from grazing-fees and the sale of grass for fodder.

## CHAPTER VI

### OCCUPATIONS AND TRADE

---

ARTS AND INDUSTRIES—Silk-weavers—Cotton weavers their numbers—Their methods—Tape-weaving—Gunny weaving—Cotton dyeing—Chintz stamping—Mats and tatís—Metal work—Painting—Pith work—Musical instruments—Wood and stone carving—Ropes—Oils—Tanning—Shoes—Baskets—Bangles—Pottery—Country sugar—Mercury—House-building—Printing presses—Rice mills—Indigo factories—Ship-building—Dowlashwaram work shops—District Board Workshops at Cocanada—Samalkot distillery and sugar factory—Dummagudem lace TRADE—Markets—Grain dealing—Exports—Imports—Trade of Cocanada—The harbour—Port conservancy—European business houses at Cocanada—European Chamber of Commerce—Steamers visiting the port—Amount of trade—Character of trade. WEIGHTS AND MEASURES—Goldsmiths' weights—Commercial weights—Measures of capacity—Miscellaneous commercial notations—Lineal measures—Land measures—Measures of time—Local monetary terms.

As in other districts, agriculture and the tending of flocks and herds employ the very large majority of the population. This is especially the case in the Agency. Precise statistics are not available for the district as it stands at present, as the census of 1901 was taken before its limits were altered. Agricultural methods have been referred to in Chapter IV above, and the breeds of cattle and sheep in Chapter I. Of the arts and industries, weaving employs a larger number of hands than any other.

The weaving of silk is done on only the smallest scale. Silk borders are often given to cotton cloths, but the pure silk cloths worn in the district are imported. The best come from Benares and Calcutta, but commoner kinds are brought from Ganjám and elsewhere by local merchants and pedlars. Silk is rarely employed for ordinary wear, but is very commonly used by the higher castes for what are called *madí* cloths, that is, the ceremonially pure garments which are worn at home at meal times. The only silk fabrics made locally are the turbans and kerchiefs made by a few Dévángas and Karnabattus at Peddápúram. These seldom sell for more than Rs 10. The silk is obtained from Calcutta and Bombay and is dyed locally with violet, red, green and yellow aniline dyes. These colours are popular, and, since the cloths are not often washed, the fugitive character of the aniline pigment does not matter. This industry is a small one, and does not appear to be increasing.

Though silk-weaving is rare, the manufacture of cotton cloths is largely carried on. Almost every other village in the plains contains a few weavers, and a fair number of them possess a large contingent. In Rajahmundry some 400 households are so employed, in Jagannapéta (Nagaram taluk) 300, and in Tuni, Peddápúram, Bandámulanka (Amalapuram), Uppáda and Kottapalli (Pithápúram division) about 200 households. Four other villages each contain 100 weavers, and in about twenty other places the number of the craft is considerable. In the days of the East India Company, the exportation of cloth from the district was very large. Some seven lakhs of rupees were paid annually by the Company for local fabrics, and in some years the figure rose above ten lakhs, and in one year touched fourteen. The abolition of the Company's cloth trade had a most prejudicial effect on the weaving industry, and so on the prosperity of the district as a whole. The value of the piece-goods exported in 1825-26 was over fourteen lakhs, in 1842-43 it was less than two. In the import of cotton fabrics from Europe which followed, Gódvári shared to a much less extent than some other districts. English calicoes and longcloths are not now more popular there than the country fabrics, nor cheaper, and the use of them is very limited.

Most of the locally-woven cloths are white, and a visitor from the south cannot fail to be struck with the rarity of colour in the dress of the women. The men's cloths are often red, but the dye is applied after, and not before, the weaving. Of recent years the manufacture of coloured cotton tartans (*lungis*) for Muhammadans has been taken up by some of the weavers in a few centres. The white cloths worn by the women sometimes have coloured borders, but these are generally of the simplest kinds. They are very rarely of silk, but not uncommonly of 'lace,' that is, gold or silver thread, and the borders at the ends are sometimes embroidered with simple patterns in lace. This class of work is done at Uppáda, Kottapalli and Múlapéta in Pithápúram, at Totaramudi in Amalapuram and by a few weavers in Tuni and Rajahmundry.

The texture of the local work is often exceedingly fine. In Kottapalli and Múlapéta the weavers use counts as high as 200s, and 100s, 130s and 150s are employed in a good many places. The Kottapalli and Múlapéta fabrics are locally called Uppáda cloths, and under that name are well known as far south as Tanjore, and are said to be sent even to Calcutta and Bombay. Their prices run up to Rs 10

There is hardly anything worthy of mention in the methods of the local weavers. These are extraordinarily simple everywhere, and form a remarkable contrast to the complications entailed by the more elaborate work done in the great weaving centres of the south. Where special patterns are embroidered on the loom, the warp is given the necessary changes by the laborious method of picking out with the hand, at each passing of the shuttle, the threads which have to be lowered or raised. The great majority of the weavers are Devángas by caste. In Kottapalli and Mulapéta Pattu Sáles monopolize the work, while there are a few Padma Sáles in Cocanada taluk, some Sáles in Samalkot and Peddápúram, and some Karnabattus in the last-named place.

Tape for the cots so universally used in the district is largely manufactured, both in a number of scattered villages and in the Rajahmundry jail. It is woven from white cotton, and is of from half an inch to three inches in breadth. The work is usually done by Devángas, but in the central delta Bógams (the dancing-girl caste), and elsewhere a few men of the Singam sub-caste of the Sáles are also engaged in it.

Gunny-bags are woven from hemp by a few Perikes in Vangalapúdi and Singavaram in the Rajahmundry taluk.

The dyed cloths for men already mentioned are sold in quantities in the district and are also exported by the Cocanada merchants to Bombay, Calcutta and Rangoon. The places best known for this dyeing industry are Gollapálayam (in Cocanada taluk), where some 70 men are employed, and Cocanada and Samalkot, where the number of workers is about 30. Most of them are Kápus, and the next most largely represented caste are the Tsákalas, or washermen. A few Rangáris and Velamas also assist. None of them weave the cloths themselves.

The most popular colours are red, dark blue, and pink, or 'rose' as it is called. There are three shades of red, two of blue, and several of pink. Aniline and alizarine dyes, bought in packets or casks, are always used. In Cocanada chay-root (*sirivérú*) was employed until recently for red, but was abandoned because it involved more trouble and expense than the imported dyes. Black is still made sometimes with iron filings.

The methods of dyeing are much the same as elsewhere, the cloth being treated with oil emulsified with the ashes of certain pungent plants, soaked in a mordant (generally a solution of gall-nuts or alum) and then boiled in a pot of dye.

to which the dried leaves of sundry jungle shrubs, believed to brighten the colour, have been added.

The same castes which do this dyeing also engage in the stamping of chintzes. Only two colours, red and dark blue, are used. The former is made with imported dyes and the latter sometimes from iron or from copper sulphate. The processes are again the same as elsewhere. The pattern desired is stamped with a pattern-block which is pressed on a pad soaked in a mixture of alum and gum. The fabric is afterwards immersed in boiling dye and then washed in clean water. The dye only takes where the alum mordant has affected the cloth, and washes out of the other parts. Sometimes the whole cloth is soaked in the mordant and then stamped with the dye itself. White spots on a coloured ground are produced as follows. The spots are stamped on the cloth with a pattern-block dipped in hot wax, and the whole cloth is then dipped into the dye-tub. The dye does not act where the cloth is protected by the wax spots, and the parts under these latter come out white. The wax is then removed by boiling the cloth.

Mats of grass are seldom made, the small demand being supplied from Madras and Bastar State. Plaited mats of palmyra, date and cocoanut leaves, and of split bamboo, are largely manufactured. Those of cocoanut leaves are chiefly made in the central delta, and the others everywhere in the plains. The date mats are generally used for packing, the cocoanut mats for tattis, and the palmyra mats for covering floors or, by the lower classes, for sleeping on. The first are made by Idigas and Yerukalas, the second by Málas, and the last by Madigas and (more rarely) by Idigas, split bamboo work is done by Medaras.

Some 25 Málas weave kas-kas tattis at Samalkot. These are made of a scented grass called *veti véru*, found in some of the tank beds, and supply the local demand at Rajahmundry and Cocanada.

Metal vessels for household use are only manufactured on a very small scale. Kamsalas have a monopoly of the industry, which is stagnant, if not declining. Brass or bell-metal vessels are made by a few families in Cocanada, Gollamúdádá (in Cocanada taluk), Tuni, Rágampéta (in Peddápúram taluk), Pithápúram, Dowlaiswaram, Rajahmundry and Peddápúram. At Marripudi in the Peddápúram taluk ten or twelve men make bells of bell-metal. Copper is worked only by the Kamsalas of Cocanada. Vessels of lead and silver are made in that town and Amalápúram, and lead vessels by a few men in Rajahmundry and Peddápúram. Metal-work of

1 all sorts is imported in large quantities from the Vizagapatam  
 2 district, especially from Anakápalle and Yellamanchili, and  
 3 hawked for sale at all the important festivals.

Of the local manufactures, the brass-work of Peddápúram and the bell-metal work of Pithápúram and Rajahmundry are of good quality and well known. The bell-metal vessels are always cast, but the brass ones are made of three or more pieces soldered together. The lead-work is cast at Rajahmundry, but everywhere else both lead and silver vessels are hammered out of one piece.

Besides the manufacture of household vessels, a little ornamental metal-work is done at Rajahmundry, Cocanada, and Peddápúram. At the two former places brass and copper armour and canopies are made for idols, and at Peddapuram and Dowlaishweram idols of copper are made. In both cases the work is first cast, and then finished with the chisel.

A little painting of a rude kind is done in the district. At Gollapálaiyam (eight miles south-south-west of Cocanada) a family of Kápus paint Hindu gods on curtains and punkah frills with a good deal of skill. Their only tool is a short sharp stick with a piece of cloth tied near the end, the point is used for drawing the outlines and the cloth for applying the colours, which are imported from Europe. Their work was considered worthy of being sent to the Delhi Durbar Exhibition, and they say that it is in demand in China, whither it is exported from Yanam. Two Múchis execute frescoes on walls at Rajahmundry, and one of them paints on cloth. A Muchi of Antarvédí in Nagaram taluk also paints figures on cloth gummed on to wood.

A little inferior pith-work is done by a few Muhammadans at Nagaram and Jagannapéta. They make flowers and images out of *sôla* pith.

Tamburas and vînas are made (by one Kamsala at each place) at Pithápúram and Rajahmundry, and also at Rájavólu, Sivakódu and Tátipáka in Nagaram taluk. The sounding-boards are carved out of solid blocks of wood. Teak and jack are used, but preferably the latter. The work done at Sivakódu is good.

Wood-carving of excellent quality is done in a number of places. In almost all considerable villages there are a few Muchis or Kamsalas who can carve furniture and door-frames, and make the *ódhanams*, or carved platforms on which gods are carried. The work at Cocanada, Dráksharámam, Rajahmundry, Dowlaishweram and Sivakódu is especially noteworthy.

A few stone-carvers are to be found at Rajahmundry, Jégurupádu in the same taluk, Venkatayyapálayam in Ráma-chandrapuram, and Vúbalanka in Amalápuram. They chiefly make images of the gods. The Jégurupádu work is well known in most parts of the district

Ropes are made from the fibre of the cocoanut and palmyra palms and the sunn hemp and 'jute' (*gógul*) plants. The coir ropes are mostly made in the central delta, especially at Bendamurlanka, Ambájpeta and Péruru. Large amounts of hemp, palmyra and date fibre are also sent to Europe from Cocanada

Very large quantities of gingelly, castor and cocoanut oils are manufactured. The castor oil is generally made in iron mills in regular factories. There are twelve or thirteen of such factories at Cocanada, four or five at Rajahmundry and Peddápuram, and others at Pithapuram, Tuni and Dowlaishweram. Gingelly oil is made in a factory at Tuni, but everywhere else both it and cocoanut oil are made in the ordinary wooden mills. These are much smaller than those of the southern districts, are put up in the back-yards of houses, and are worked by a single bullock which is usually blindfolded to prevent its getting giddy from going round in such a small circle. Cocoanut oil is made in large quantities at Ambájpeta, Bódasakurru, Peruru and Munjavarapukottu in the Amalápuram taluk. The oil-making castes are the Telukulas (who correspond to the Vániyans of the south), Kapus and Idigas. Gingelly oil is commonly used for cooking and oil baths, cocoanut oil for the same purposes (especially in the central delta) and as a hair-oil, and castor oil for lighting. This last is being ousted by kerosine, and considerable quantities of it are exported. Castor and cocoanut cake are used as manures, especially for sugar-cane, and the former is exported to Cochin and Colombo for use on tea and coffee estates. Gingelly cake is given to cattle and is also used in curries. Curry made with it is a favourite dish with both rich and poor and is even offered to the village goddesses.

Coarse leather for the manufacture of country shoes is made by the Mádigas all over the low country. Their method of tanning it is very elementary. The hides and skins are soaked in a solution of chunam to remove the hair, then in clean water for a day, next for ten days in a decoction of the bark of the babul (*Acacia arabica*) tree, and finally they are stitched into bags, which are filled with babul bark and soaked for a week in water.

In Rajahmundry three tanneries, owned by Labbais from the Tamil country, work in a less primitive fashion. The

I hides and skins are first soaked in clean water for a night,  
 B then in chunam and water for twelve days so that the hair  
 may be easily scraped off, next in clean water for two  
 days, then for two more days in chunam and water, next  
 in a decoction of *tangédu* (*Cassia auriculata*) bark for a fort-  
 night, and finally in a solution of gall-nut for three days.  
 They are then rubbed with gingelly oil and are smoothened  
 by being scraped with a blunt copper tool. Most of the  
 leather thus produced is exported to Madras.

Rough shoes of home-tanned leather are made by Mádigas  
 in almost all the low-country villages. Those produced in  
 Siripalli in the Amalápuram taluk are well known. Sana-  
 palli-lanka in the same taluk had formerly a name for this  
 industry. Good boots and shppers, excellent native shoes  
 and Muhammadan slippers (*saddvu*) are manufactured in  
 several centres. The common work is done by Mádigas, and  
 the better class by Muchis, who ornament the Muhammadan  
 slippers with elaborate designs in silk and bits of metal. The  
 handiwork of the latter is exported to Hyderabad and Ran-  
 goon through the local Muhammadan merchants. Cocanada  
 and Rajahmundry are the chief centres of the industry, but  
 the work at Peddápúram is good, and some is done at Samal-  
 kot, Tuní, Pithápúram and Dowlaishweram. Good boots  
 and slippers are also made at the Rajahmundry jail.

Baskets are made from date fibre, palmyra leaves and  
 split bamboo by Yerukalas, Mádigas and Médaras respect-  
 ively, and from rattan by Yerukalas in parts of Pithápúram  
 taluk.

Black 'glass' bangles are made in several villages, notably  
 by a few Linga Baliyas in Sitarámpúram and Hamsavaram  
 in the Tuní division and at Rágampéta in Peddápúram and by  
 some Kápus in Duppalapúdi in Rajahmundry. At Rágampéta  
 the Linga Baliyas also blow simple flasks or retorts of this  
 'glass,' which are used in making sublimate of mercury (see  
 below) in the neighbouring village of Jagammapéta. The  
 'glass' is imported from Nellore or Madras, and is manufac-  
 tured by lixiviating alkaline earth, allowing the salts to crys-  
 tallize out in the sun, and heating them in a crucible for some  
 hours with flint and bits of broken bangles. The vitreous  
 mass so produced is melted in this district in circular furnaces  
 and the bangles are made by taking a small quantity of the  
 molten 'glass' on the point of an iron rod, which is then  
 twirled rapidly round until the glass assumes a roughly  
 annular shape. This ring is transferred, while still glowing,  
 to a heated conical clay mould, which the workman twists  
 rapidly round with one hand while with the other he shapes

the ring into a bangle with a tool resembling an ordinary awl. The finished article is often decorated with a coating of lac, and into this are sometimes stuck bits of tinsel or looking-glass. Better class bangles are all imported, many of them from Bombay.

Ordinary earthen pots are made everywhere, and a few potters at Rajahmundry make good water-bottles (*gujas*) out of a mixture of white alkaline earth (*suddamannu*) and ordinary potter's clay. The earth is said to be brought by Gollas from a village called Punyakshétram in the same taluk.

At Rajahmundry a few families of Devángas make sugar-candy and soft sugar. White crystallized sugar is made in the Deccan Sugar and Abkárí Company's factory at Samalkot referred to below. Natives of the district are said to have some prejudice against this sugar because it is clarified with bone charcoal, but the prejudice disappears if it is converted into sugar-candy or soft sugar (*bura*). The 'factory sugar' is therefore boiled in water, with the addition of a little milk, until it attains a treacly consistency, and is then poured into shallow plates where it is left for ten days. It crystallizes in these into sugar-candy, and the liquid which remains among the crystals is again boiled with the addition of a little water, and is then well stirred with a wooden instrument until it turns into soft sugar. A precisely similar industry exists at Hindupur in Anantapur district, and no doubt elsewhere.

Some five or six persons, mostly Devángas, make white sublimate of mercury at Jagammapéta in the Peddapuram taluk. Four varieties are made, namely *basmam* (a white crust), a white solid substance called *kárpuram*, and a red powder of two kinds, one called *sinduram* and the other *shadgunam*. The *basmam* is made by heating salt and quicksilver in the proportion of one to five for fifteen or sixteen hours, with a pot inverted over the mixture. The fumes form a crust on the inverted pot, which is the *basmam*. This is then put in retorts of bangle 'glass' which are coated with mud, and heated for the same period, when it turns into *kárpuram*. *Sinduram* is obtained by mixing quicksilver, sulphur, and *ardhalam* (mineral arsenic) in the proportion of one, one-half, and one thirty-second, and heating them for one and a half hours. The resultant matter is pounded in a mortar, and then heated in a retort like the *basmam*. For *shadgunam*, quicksilver and sulphur are taken in the proportion of two to one and are pounded in a mortar, the mixture is then heated in a retort like the *basmam*, only for a longer period. The quicksilver is got from Bombay and Calcutta. The existence of a large supply of cheap wood fuel in the neighbourhood is

a great advantage in this industry, and is not improbably the cause of its existence here

The art of house-building is much studied in the district. In every large town there are professional architects. Those of Rajahmundry and Dowlaishwaram are well known and are employed in all the low-country taluks.

There are five printing-presses at Cocanada and the same number at Rajahmundry. Except two of those at Cocanada, namely the Sujana Ranjani press and Messrs Hall, Wilson & Co's press, both of which employ about 25 men, these are very small affairs. In the former of the two, vernacular books and two Telugu periodicals, one weekly and one monthly, are printed, and the latter carries on a general business. Another monthly Telugu newspaper is printed at another press at Cocanada, and two more at Rajahmundry. At the latter town a weekly and a fortnightly paper are printed in English.

Several large rice-husking mills are at work in the district. The most important is that owned by the Coringa Rice Mills Company at Georgepet near Coringa, which employs a hundred men. There are also three more in Cocanada and four in Rajahmundry, two of which are not now working. Another at Amalápuram has also stopped work for the present. The mills buy the paddy outright and export the husked rice, and do not husk paddy for payment, as is sometimes done.

There are several indigo factories in the Amalápuram taluk, of which seven employ 30 men or more in the season. Those at Vélanakapalli and Ayinavalli employ 75 and 150 hands respectively.

At one time a large ship-building industry was carried on in Tállarévu on the Coringa river. Some two generations ago, it is said, about a hundred big ships used to be built, and four times that number repaired, every year, and boats came for repairs even from Negapatam and Chittagong. What with the increasing use of steam, and the silting up of the Coringa river, the industry is now almost dead. As recently as 25 years ago, it is said, ten or fifteen sea going boats were built every year and some fifty repaired, but in 1903 only five were built, in 1904 only one, and in 1905 none at all, while only two ships were repaired in 1903 and in 1904. The boats built and repaired were native brigs of a hundred tons or so.

Of the enterprises managed by European capital, the most important are the Public Works workshops at Dowlaishwaram, which comprise a foundry, and carpenters', fitters' and smiths' shops. They employ a daily average of 145 men, and

during the calendar year 1904 turned out work to the value of Rs 1,63,600. The output consists chiefly of wood and iron-work and furniture for buildings constructed by the department, wooden and iron punts and staff boats for use on the canals, repairs to steamers and other floating plant, lock gates, sluice shutters and gearings, and repairs to engine boilers and machinery belonging to the department. The shops also undertake work for other departments, municipalities, and private persons. These are charged ten per cent on the cost of the raw materials *plus* fifteen per cent on the total cost of the work.

The District Board also has workshops of its own. These are at Cocanada, and the work done in them consists of such items as the construction of iron and wooden ferry boats and ballacuts, small iron bridges, doors and windows, office furniture and iron sheds for markets (of which latter a large number have been made), and of repairs to tools and plant, including the steam road-rollers and the two steam ferry-steamers owned by the District Board. The shops are in charge of an overseer, subject to the control of the District Board Engineer, and all the hands are temporary men on daily wages. The value of the work turned out in 1903-04 was approximately Rs 30,000, inclusive of materials.

An important industrial undertaking exists at Samalkot in the works of the Deccan Sugar and Abkari Company, Limited, established in 1897 and at present under the management of Messrs Parry & Co., Madras. Excellent plant and buildings have been erected about half a mile south-west of the railway-station and the capital of the company is ten lakhs. The manufacture of both refined sugar and spirit is carried on, and about 400 men are employed daily. Sugar is extracted from jaggery by the usual process, and the final residue molasses form the staple material of the distillery. Both palmyra and cane jaggery are used, the bulk of them being obtained in this and the surrounding districts. Three kinds of sugar are manufactured, namely, a white granulated, a soft, and a brown sugar, and the total output in 1903 was 8,600 tons. In the distillery two stills and a rectifier are in use, and the usual method of spirit manufacture is employed. During 1903, 198,000 gallons of proof spirit were manufactured. Arrack is supplied from the distillery to this district and Kistna, Nellore and Cuddapah, for the supply of which the company hold the contract. Two artesian wells have been recently sunk in the company's compound.<sup>1</sup>

<sup>1</sup> See Chapter IV, p. 90.

The wife of the Rev J Cain, the missionary at Dummagudem, has started a lace-work industry at that station which is known even outside India. Lace-making was originally taught at the Church Missionary Society's boarding-school for girls, and during the famine of 1896-97 Mrs Cain encouraged the young women who had learnt the art in the school to take it up as a means of livelihood. From that time forth, the industry spread among the wives of the natives round, and there are now 110 workers, most of whom are Christians. Mrs Cain pays them for their work (Rs 70 or Rs 80 a week are expended in wages) and sells it in India, England and Australia. The lace is not the 'pillow lace' made elsewhere in South India, but what is called 'darned net work,' which somewhat resembles Limerick lace in appearance.

Fairs or markets are common in Gódávarī. There are as many as 40 under the control of the taluk boards, and the right of collecting the usual fees at them sold in 1904-05 for over Rs 21,600. Those which fetched the highest bids were the great cattle-markets at Drākshārām and Pithapuram, which were leased for Rs. 3,165 and Rs 2,500 respectively, the Tunī market, which fetched Rs 2,010, and the Ambáypēta cattle-market, which sold for Rs 1,625. The markets which chiefly serve the Agency are those of Yelévaram in Peddápūram taluk and Gókavaram in Rajahmundry. To these resort the petty traders who have direct dealings with the hill men in the interior, and, to some extent, the hill men themselves.

There are one or two centres in each taluk in which live the local merchants who collect grain from the ryots and either export it themselves or sell it to other and larger merchants. The money-lenders are generally also grain dealers, as their loans are often paid in kind. A common system, known as *jattu*, is that by which a ryot borrows money on the security of his crops and undertakes to sell these when harvested to the money-lender at less than the market price. Another usual arrangement, called the *vāraṅam* or *pattubādī* system, is for a ryot to keep a sort of running account with the money-lender, getting small loans from time to time and clearing off the debt, principal and interest, at harvest. Here, again the grain is sold at less than the market price, the difference being about ten rupees per garce. The ryot is also expected to graze his creditor's cattle and to supply him with vegetables when called upon.

Almost the only noteworthy article of export from Gódávarī is its surplus agricultural produce, but a fair quantity of the locally woven, dyed, or stamped cotton goods

are sold outside the district, and so are the hides and skins from the tanneries of Rajahmundry. The distillery and sugar-factory at Samalkot also sends large quantities of its sugar and arrack to other parts of India. Of the agricultural products exported, rice is the largest item. Pulses, oils, fibres of various kinds and hemp are also shipped in great quantities.

The chief imports into the district include metal vessels, kerosine oil, iron, European and other piece-goods, leather and cattle.

The only considerable seaport in Góda-varí is the flourishing town of Cocanada, which serves not only the district itself, but its neighbours to the north and south and an extensive hinterland which includes parts of the Nizam's Dominions.

The port of Cocanada is situated in the south-west corner of Coringa bay, a large but shallow sheet of water, five miles by five in extent, lying at the northernmost angle of the delta. The bay is something the shape of a horse-shoe and is only open from the north-east. The most northerly mouth of the Góda-varí flows into it on the south, where it is gradually silting it up, and the everlengthening arm of Cape Góda-varí which is estimated to be advancing seawards at the rate of a mile in 20 years, encloses it on the east. The rapid shallowing of the bay has rendered it necessary for large ships to anchor five miles from the shore to the north-east of Cocanada town, but the anchorage is well-protected and exceptionally safe.

Goods have to be landed in cargo boats, but the channel leading from the anchorage to the harbour itself is deep enough to allow boats of 100 tons burden, and drawing as much as five feet of water, to reach Cocanada at certain states of the tide. The harbour consists of a tidal creek which receives the surplus of the Cocanada and Samalkot canals and the discharge of the Bikkavólu drain and the Yelérú river, which together enter the Samalkot branch of the creek just below the last lock of the Samalkot canal. The harbour shows a tendency to silt owing to deposits brought from above, and its mouth is also with difficulty kept clear of the sand and mud which is swept into the Coringa bay from the Góda-varí on the south, from a drainage creek entering the bay just to the north of the harbour, and in stormy weather, from the open sea on the north-east. Two dredgers are therefore kept constantly at work and it has also been found necessary to extend the mouth of the harbour by long groins. The harbour is revetted from the bridge leading to Jagannáthapuram, and the revetment is continued along the groins, its

- 1 total length being 3,680 yards on the north and 3,780 yards on the south side. Of this extent 2,700 yards of revetment and 87 yards of groin on the north and 2,500 and 260 yards of revetment and groin respectively on the south had been erected as early as 1855, and the groins were extended considerably in 1887 and very largely about 1893. The chief difficulty is experienced from the mud creek which, as just mentioned, flows into the bay just north of the harbour mouth. Its course and mouth have altered with the foreshore, going further and further towards the east. This is the result of its own action combined with the construction of the groins. The northern wall crosses its mouth, with the result that the silt it brings down has formed a solid sand bank along the groin. This bank has extended with each extension of the groin and now threatens to choke the harbour's mouth. The groins have been given a turn to the north to endeavour to counteract this tendency, but without success. Further means of dealing with the difficulty are now being considered.

The port had originally four light-houses and two port lights. The latter still stand on the ends of the two groins, but two of the former are no longer in use. The light-house at Cocanada itself has not been used since 1877 (though it has been left standing as a landmark) and the Hope Island light-house on what was once the most north-easterly extremity of the delta, was abandoned in 1902. There are now revolving lights at Vakalapudi, some five miles to the north of Cocanada, and on the Sacramento shoal, over twenty miles south of the present Point Gódávari, to warn vessels off the point and shoal.

Cocanada possesses a Port Officer, and he and his establishment are paid in the usual way from port funds chiefly derived from dues on vessels visiting the place. 'Landing and shipping dues' are also collected from the local merchants at certain fixed rates on all cargo landed and shipped, and this money, with the rent of certain ground within port limits, is devoted, as elsewhere, to meeting all expenditure involved in the improvement of the port, such as the maintenance of dredgers, groins and the foreshore. The fund so constituted is administered primarily by the Cocanada Port Conservancy Board, of which the chairman is the Collector and the vice-chairman one of the members of the European Chamber of Commerce. This body fixes the rates of dues to be paid, looks after the ordinary measures of port conservancy, and initiates measures for the improvement of the port. Its expenditure is, as usual, under the control of the Presidency Port Officer and ultimately of Government.

Several of the leading mercantile houses in the Presidency have agents in Cocanada (among them Messrs Ralli Bros., Messrs Gordon, Woodroffe & Co., Messrs Volkart Bros., Messrs Wilson & Co, Messrs Ripley & Co and Messrs Best & Co) and in addition the place is the head-quarters of several other substantial European firms, who are engaged in general trade and own local undertakings of various kinds. Messrs Simson & Co own a rice-mill and act as agents for the Asiatic Steam Navigation Company, Messrs. Hall, Wilson & Co are agents for the British India line and were part-owners and local managers of the Oriental Salt Company, which until recently was working the salt-factory at Jagannathapuram, Messrs Innes & Co are managers of the Coringa Rice Mills Company, and Messrs Barry & Co have a cheroot-factory where cheroots are made for export to Burma. There are also a great number of native merchants in the town. Indeed the mercantile importance of the place is so considerable that the Bank of Madras has a branch there under a European Agent, and both native and European Chambers of Commerce have been constituted.

The European chamber at Cocanada was established as long ago as 1868. Representatives of the leading European firms and the local Agent of the Bank of Madras are members. Its objects are 'to watch over and protect the interests of trade, to collect information on matters bearing thereon, to communicate with authorities and individuals upon the removal of grievances and abuses, to decide on matters of customs and usage and to form a code of practice whereby the transaction of business may be facilitated,' and it has displayed much activity in all these directions. The practice of annually printing its chief proceedings, which was inaugurated in 1903, is to be continued. The native Chamber of Commerce is theoretically quite independent of the other, but generally the two bodies work hand in hand.

The port is visited by the British India steamers, as many as six or seven of which often call in a week, by the Asiatic Steam Navigation Company's boats, two of which call every fortnight, and by the Clan Line steamers, three or four of which come every month. The Austrian Lloyd steamers and those of a Venetian company call occasionally.

In 1902-03 (see the figures in the separate Appendix to this volume) the total value of the export trade of Cocanada amounted, in round figures, to Rs 1,22,80,000 and that of the imports to Rs 25,10,000, making up a total trade of Rs 1,47,90,000 or £986,000. In the statistics of that year the port takes the fifth place among those of this Presidency—

- <sup>1</sup> being passed only by Madras (total trade 1,406 lakhs), Tuticorin (388 lakhs), Cochin (320 lakhs) and Calicut (192 lakhs)—and the twelfth place among the ports of British India<sup>1</sup> The trade has naturally varied considerably in different years, but in only three out of the 27 immediately preceding 1902-03 did it rise above 200 lakhs in total value These were 1889-90 (201 lakhs), 1896-97 (216 lakhs) and 1892-93 (239 lakhs) In 1878-79 it fell below 75 lakhs, but in no other year was the figure less than 100 lakhs In 1903-04 the imports were valued at Rs 38,73,000 and the exports at Rs 1,67,31,000, making a total of Rs 2,06,04,000 The exports have always been largely in excess of the imports The proportion in 1903-04 is fairly typical of other years

In that year, out of a total export trade of 167 lakhs, goods to the value of 84 lakhs were sent to ports outside India (including Burma) and the rest to Indian ports, of the latter, 11 lakhs went to the ports of this Presidency The foreign export trade has generally been equal to or larger than the Indian export trade, and often much larger The trade with the rest of the Presidency has always been small, and it has very largely decreased in the last seven years, probably owing to the competition of the railway

In 1903-04 the foreign imports made up rather more than half of the total import trade, but the figures of that year are rather exceptional as the imports from abroad are usually nothing like so large as those from India and Burma In former years the imports from other ports in this Presidency were considerable and averaged in value about one quarter of the total imports, but, like the exports to other places in the Presidency they have much decreased in the last six years

- <sup>f</sup> Of a total foreign export trade in 1903-04 of Rs 84,04,000, the exports of cotton were valued at Rs 33,93,000, of rice and paddy (chiefly the latter) at Rs 29,90,000, and of oil-seeds (castor and gingelly) at Rs 9,25,000 Thus these commodities made up 73 out of the total of 84 lakhs Food-grains accounted for Rs 2,02,000, oil-cake for Rs 1,69,000, fibre<sup>2</sup> for brushes for Rs 1,56,000, and castor oil for Rs 97,000 The cotton is chiefly sent to France (Rs 9,06,000), Holland (Rs 6,42,000) and Britain (Rs 3,32,000) as well as to several other European countries and Japan Rice and paddy is

<sup>1</sup> The larger ports outside this Presidency were Bombay (11 172 lakhs) Calcutta (10 381 lakhs), Rangoon (2 858 lakhs), Karachi (1,929 lakhs), Moulmein (440 lakhs), Chittagong (283 lakhs) and Akyab (240 lakhs)

<sup>2</sup> Chiefly palmyra fibre extracted from the thick stem of the leaf This item has much increased in the last year or two

chiefly taken by Ceylon (Rs 8,67,000), Réunion (Rs 663,000) the Straits Settlements (Rs 5,23,000), Mauritius (Rs 4,88,000) and Japan (Rs 2,76,000) Gingly oil goes chiefly to Ceylon and France, and castor oil to Britain and Russia The fibres and the oil-cake go almost entirely to Ceylon An important item is tobacco, which is sent unmanufactured in large quantities to Burma to be made up into cheroots

Nearly the whole of the foreign import trade of 1903-04 was made up of unrefined sugar (Rs 9,69,000), kerosine oil (Rs 7,47,000) and various kinds of metal and metalware (Rs 1,40,000) The sugar all came from Java, and the kerosine oil from Russia (Rs 3,32,000), the United States (Rs 2,61,000) and Sumatra (Rs 1,53,000) The metalware was chiefly from the United Kingdom

The coastwise import trade is small The largest items were gunny-bags from Calcutta (nearly five lakhs), cotton twist and yarn principally from Bombay (some three lakhs), kerosine oil chiefly from Rangoon (two and a half lakhs), ground-nut oil from Madras ports and cotton piece goods from Bombay (each about a lakh), and cocoanut oil, also from Madras ports, Rs 84,000

The coastwise export trade included thirty-six lakhs' worth of grain and pulse of various sorts, of which five-sixths was rice and the greater part was sent to Bombay Nearly sixteen lakhs' worth of tobacco leaf was sent to Burma, and gingly worth nine lakhs (of which two-thirds went to Burma) and castor seeds worth two lakhs (nearly all of which went to Calcutta) were other considerable items

Outside the remoter parts of the Agency, where regular tables are little used, the following are the ordinary weights and measures in the district The table employed by goldsmiths is generally —

4 <i>visams</i> (grains of paddy)	= 1 <i>pātika</i>
2 <i>pātikas</i>	= 1 <i>addiga</i>
2 <i>addigas</i>	= 1 <i>chinnam</i>
30 <i>chinnam</i> s	= 1 tola (180 grains)

The ordinary table of commercial weights is as follows —

2 <i>pampus</i>	= 1 <i>yēbulam</i>
2 <i>yēbulams</i>	= 1 <i>padalam</i>
2 <i>padalam</i> s	= 1 <i>vis</i> (= 5 seers, or 120 tolas)
2 <i>vis</i> es	= 1 <i>yēlēdu</i>
4 <i>yēlēdus</i>	= 1 maund (of 25 lb)
20 maunds	= 1 <i>putti</i> (or candy)

VI In Pólavaram, between the maund and the *pattu*, come the  
 TS *yédumu* of 5 maunds, and the *pandumu* of 10 maunds. These  
 ES words are respectively corruptions of *aidu tumulu*, 'five turns' and *padi tumulu*, 'ten turns.' Wholesale merchants also buy and sell in terms of bags (*basthas*) supposed to weigh 166 lb

Oil and ghee are sold retail by weight in the shops, and wholesale or retail by measure by the Telukulas and Gollas, milk and curds always by measure, long chillies by weight, and short ones by measure, though at Rajahmundry and Pólavaram both kinds are said to be sold by weight. Jaggery and tamarind are described in *kantlams* in addition to the above weights, one *kantlam* being equivalent to nine maunds everywhere in the district except at Peddápúram, where it is ten and a half maunds. Tape is sold by weight in terms of *yettus* and its submultiples (half, quarter, etc.) Fuel in large towns is sold by the following table —

5 maunds	= 1 <i>kóvadi</i> , <i>yédumu</i> or <i>pattu</i>
4 <i>kóvadis</i>	= 1 <i>pattu</i>

Weights below a *pattu* are described in submultiples of that weight

The table used in Bhadráchalām is quite different. That taluk is situated above the Gháts, and no doubt the influence of the Nizam's Dominions and the Central Provinces predominates. The weights are —

2 <i>chatáks</i>	= 1 <i>puvu sir</i>
2 <i>púvu sirs</i>	= 1 <i>ardha sir</i> (= $\frac{1}{2}$ seer)
2 <i>ardha sirs</i>	= 1 seer (= 24 tolas)
5 seers	= 1 viss
8 vissees	= 1 maund
20 maunds	= 1 <i>pattu</i>

Peculiar to this taluk is the selling of oil retail by weight. At Pólavaram a balance resembling the Danish steel-yard is used. One end of a longish stick is marked with notches denoting different weights. The article to be weighed is hung from this end of it, and the stick and article are lifted by a string loop which fits into the notches and is tried in one after the other of them until the stick hangs horizontally. The notch in which the loop then lies indicates the weight of the article.

The following table of measures is recognized, with one or two exceptions, in all the taluks outside the Agency —

5 tolas weight of rice	= 1 <i>gudda</i>
4 <i>guddas</i>	= 1 <i>sóla</i>
2 <i>sólas</i>	= 1 <i>taava</i>

2 <i>tavvas</i>	= 1 <i>mānska</i> or seer (holds 80 tolas weight of rice)
2 <i>mānskas</i>	= 1 <i>adda</i>
2 <i>addas</i>	= 1 <i>kuncham</i> (320 tolas weight of rice)
20 <i>kunchams</i>	= 1 <i>yédumu</i> or <i>kāvadi</i>
2 <i>yédumus</i>	= 1 <i>pandumu</i>
2 <i>pandumus</i>	= 1 <i>palle-putti</i> (= 80 <i>kunchams</i> )
7½ <i>palle-puttis</i>	= 1 garce ( <i>garisa</i> ) of 600 <i>kunchams</i> or 192,000 tolas weight of rice

The *palle-putti* of 80 *kunchams* is only found in the north-east of the district, i.e., in Cocanada, Peddápuram, Pithápuram and Tuní. In the other parts of the district the *malaka putti* of 200 *kunchams* (three of which go to the garce) is used, but not the *yédumu* or *pandumu*.

In Pólavaram the measures used are—

5 tolas weight of rice	= 1 <i>gidda</i>
8 <i>giddas</i>	= 1 <i>tavva</i>
8 <i>tavvas</i>	= 1 <i>kuncham</i> (of 320 tolas weight of rice)
10 <i>kunchams</i>	= 1 <i>tumu</i>
4 <i>tumus</i>	= 1 <i>gonedu</i>
5 <i>gonedus</i> or 20 <i>tumus</i>	= 1 <i>putti</i> of 200 <i>kunchams</i>
3 <i>puttis</i>	= 1 garce of 600 <i>kunchams</i> or 192,000 tolas weight of rice

In Bhadráchalām the scale recognized is—

10 tolas weight of rice	= 1 <i>gidda</i>
4 <i>giddas</i>	= 1 <i>sola</i>
2 <i>sólas</i>	= 1 <i>tavva</i> or seer (holding 80 tolas weight of rice)
2 <i>tavvas</i>	= 1 <i>manika</i> (of 160 tolas weight of rice)
10 <i>tavvas</i>	= 1 <i>kuncham</i> (of 800 tolas weight of rice).
2 <i>kunchams</i>	= 1 <i>trusa</i>
2 <i>trusas</i>	= 1 <i>tumudu</i>
5 <i>tumudus</i>	= 1 <i>yédumu</i>
2 <i>yédumus</i>	= 1 <i>pandumu</i>
2 <i>pandumus</i>	= 1 <i>putti</i> (of 80 <i>kunchams</i> or 640,000 tolas weight rice)

It will be noticed that the Bhadráchalam *gidda* and *tavva* are twice as large as those elsewhere, and the Bhadráchalam *kuncham* two and a half times as large

Ghee and oil, as already stated, are sold wholesale by measure. The largest measure used for oil is the *kuncham*, and for ghee the seer. Butter-milk and curd are measured in small pots called *munthas*. It is the practice in this district to set milk for curd in a number of these small pots, instead of in one large pot as is done in some southern districts, and the pots are sold separately. There are four usual sizes of them, namely, the quarter anna, half anna, three-quarter anna and anna *munthas*, so called according to the price (and so the capacity) of each. An anna *muntha* holds about half a seer. Milk is sold by the seer and its submultiples. Large quantities of milk are sometimes spoken of in terms of the *kadava* or *kadvadi*, which hold 20 and 40 seers respectively. Popular phrases to denote capacity are the closed handful, called *guppedu* or *pidikedu*, the open handful or *chāredu*, and the double handful or *dōsedu*.

Fruits (e.g., mangoes, plantains, cocoanuts and guavas), palmyra leaves, and dung cakes are sold by 'hands,' one hand or *cheyyi* being equivalent to five. Twenty *cheyyis* make one *salaga*, and for every *salaga* one *cheyyi* extra is thrown in as *kosaru* or 'for luck.' *Kosaru* means 'bargaining.' Betel leaves are sold wholesale by the *mōda*. This is a varying quantity equivalent generally to 200 or 300 leaves according to their thickness. It is supposed to be the quantity that can be held in the two hands, when the hands are pressed together at the wrist, as when catching a cricket ball. The leaves are sold retail by the *katta*, which contains 100 leaves.

The old native scale of measures is in use alongside with the English inch, foot and yard. The native scale is —

1 <i>angula</i>	=	the breadth of a man's thumb, or $\frac{3}{4}$ inch
12 <i>angulas</i>	=	1 <i>jāna</i> (span).
2 <i>jānas</i>	=	1 <i>mura</i> (cubit).
4 <i>muras</i>	=	1 <i>bāra</i> (fathom)
2,000 <i>būras</i>	=	1 <i>kōss</i> ( $2\frac{1}{2}$ miles)
4 <i>kōsses</i>	=	1 <i>amada</i> (about nine miles)
6 <i>kōsses</i>	=	1 <i>majili</i> (march, or halting place, about 13 miles)

Besides these, there are the *betta*, or the breadth of four fingers placed together, and the *loditha*, or half span, made by

extending the thumb and forefinger as far apart as possible. The *bāra* is the distance between the tips of the fingers of the two hands when the arms are both stretched out horizontally to their greatest extent. In describing heights and depths above five feet or so, natives always use the terms *niluvu* and *ara* (half) *niluvu*. The *niluvu* is equivalent to the height of an average adult person. In the Agency *chalaka* and *mancha*, which (see below) are really square measures, are used to denote distances. They each represent about 70 yards.

Some of these measures of length are used much more frequently than the English standards. Thus the *jāna* and the *mura* are very commonly used for measuring cloth, and the *mura* and *bāra* for measuring ropes. Again the *kōss* and the *amada* are in very common use for long distances, and the *maṇḍi* is not rare.

Acres and cents are only of recent introduction, and are less familiar to the natives than the English lineal feet and inches. The native table of land measures is the same throughout the district except in Tuni, Bhadrāchalam, Yellavaram, Chódavaram and the wilder parts of Pólavaram, and is based on the quantity of seed required to cultivate a given area of land. Thus a *mānādu* is the quantity of land that can be sown with a *mānika* or seer of seed, and is equivalent to about two and half cents. An *addedu* is five cents, a *kunchedu* ten cents, an *iddumu neresā* is an acre, an *yēdumu* two acres, a *pandumu* four acres, and a *putti* eight acres. A different and vaguer terminology is used in Tuni. There wet land is spoken of in terms of the out turn of paddy—or in 'garces', and dry land in terms of the number of days it would take a pair of bullocks to plough it—namely in *yēllu* or ploughs. Thus one *yēru* or 'plough' of dry land is the quantity of land that a pair of bullocks can plough in one day, or about half an acre. A 'garce' of wet land is said to be about two acres.

There appears to be no precise table of land measure known in Bhadrāchalam, perhaps because there is no need for one among the inhabitants of those uncivilized parts. The zamindars' accounts are said to be kept in acres and cents. In the wilder tracts of this taluk and of Pólavaram, and throughout the Agency, areas are described in terms of *chalakas*, *manchas* and *kattipōdu*. *Mancha* is the raised bamboo platform put up in the middle of a field, on which the watcher sits to scare away birds and animals. The term is used to describe the amount of land which can be commanded by one watcher, or about two acres. The *chalaka* is the same as the *mancha* in extent. It literally means 'a piece'. *Kattipōdu* has a reference to *pōdu* cultivation, and denotes as much land as

can be cleared in one day by one *kattī* or billhook This extent is said to be about an acre

English minutes and hours are well understood and are used equally with the native measures of time The latter are —

60 <i>vigadiyas</i>	= 1 <i>gadiya</i> (or 24 minutes)
2½ <i>gadiyas</i>	= 1 <i>ganta</i> (or English hour)
3 <i>gantas</i>	= 1 <i>jamu</i> (or watch)

Of these, the *vigadiya* is rarely, if ever, used, the term being only known to the educated Periods shorter than twenty-four minutes are generally expressed in English minutes or in terms of fractions of the *gadiya*

In telling the time of day or night a native calculates the number of *gadiyas* or *jāmus* that have elapsed since 6 A.M., or 6 P.M., as the case may be Thus 7-12 o'clock, whether A.M. or P.M., would be 'three *gadiyas*,' and 9 o'clock would be 'one *jāmu*' or 'seven and a half *gadiyas*'

There are also, however, in this as in every other district, a number of expressions in common use which denote various times of the day Those which occur most frequently here are 'the rising of the star Venus' (*tsukka podichétappudu*), which is of course variable, 'the time when the first cock crows' (3 A.M.), 'the time when the second cock crows' (4 A.M.), 'the time to begin ploughing' (6 A.M.), 'cock-crow time', 'the time to sprinkle cow-dung-water' and 'the time to make butter-milk,' both of which indicate 6 A.M., 'the time to milk the cows' (7 A.M.), 'the shepherds' breakfast time' (9 or 10 A.M.), 'the time to let the cattle out to graze,' which is very variable, 'the time when the feet burn' (midday), *muppoddu vēla*, 'when three *jāmus* have passed' (about 3 P.M.), 'time to begin cooking' (4 P.M.), '*sanda jāmu*,' about three hours after nightfall, from *sanda*, evening, and 'the thief time' or midnight A variation of the last, found in the Agency, is 'the time when the cock crows at the thief' The Agency people also use the phrase *jāva vēlu*, or '*kanni* time,' for 10 A.M. or breakfast time, and sometimes call it *muniha vēla*, or 'porringer time,' from the vessel in which they eat it

Besides the ordinary currency, cowries (*gavvalu*) are very commonly used in making small purchases throughout the low country, except in Pithāpuram and Tuni They are imported from Bombay and sold by weight Ninety six cowries make one three-pie piece, but there are a number of terms denoting smaller numbers Thus 4 cowries = 1 *punjam*, 3 *punjams* = 1 *tol*; 2 *tolis* = 1 *dammidi* (three-quarters of a pie), 2 *dammidis* = *égāni* (or 1½ pies), 2 *égānis* = 1 *dabbu*, *kāni*, or *kotta*

*dabbu*, which are the ordinary names for a three-pie piece. The value of a cowry, *punjam* and *tolu* are not absolutely constant, but vary slightly with the market price of cowries. The *dabbu* is also a term of varying application. In Pithá-puram, Tuní, and the Agency it means four pies, and is synonymous with a *páta dabbu* ('old *dabbu*'). In this case an *égdni* means two pies and a *dammidi* one pie, but the *kádní* and the *kotta dabbu* ('new *dabbu*') still denote three pies.

For sums above an anna a variety of curious terms are used. Thus,

4 <i>kotta dabbus</i>	= 1 anna
2 annas	= 1 <i>bedá</i>
2 <i>bedas</i>	= 1 <i>pávu</i> or <i>dulam</i> (= 4 annas).
16 <i>páta dabbus</i>	= 1 <i>tankamu</i> (or 5 as 4 ps)
2 <i>pávulas</i>	= 1 half rupee or <i>chavulam</i>
3 <i>pávulas</i>	= 1 <i>mupávu</i> (12 annas)
1 <i>pávu</i>	= 1 rupee
1 <i>máda</i>	= 2 rupees
1 <i>varáha</i> (pagoda) or <i>punji</i>	= 4 rupees
1 <i>puli varáha</i>	= 3½ rupees
1 <i>vanda</i>	= 100 rupees

In Tuní, and perhaps elsewhere, the *dulam* (4 annas), *chavulam* (8 annas), *pávu* (rupee), *máda* (2 rupees) and *punji*, or pagoda of 4 rupees, are used to denote percentages. Thus if a man wants to say he is giving 6¼, 12½, 25 or 50 per cent he will say he is giving a *dulam* (one-sixteenth of a pagoda), *chavulam* (one-eighth), a *pávu* (one-quarter) or a *máda* (one-half) respectively. No doubt the use of the pagoda as a unit of reference is the cause of the name *pávu* for a rupee, the word literally meaning 'a quarter'.

In Bhadráchalám, besides the usual British Indian coins, those of the Nizam's Dominions are also in common use

## CHAPTER VII

## MEANS OF COMMUNICATION

---

ROADS—Their length and condition—Quarries—Maintenance establishment and allotments—Bridges—Ferries. WATER CARRIAGE—The rivers—Upper Gódávarī project—Navigable canals their history—Expenditure and traffic—Nature of traffic—Conflicting interests of irrigation and navigation MADRAS RAILWAY ACCOMMODATION FOR TRAVELLERS—Bungalows—Chattrams

THERE are just under 850 miles of road in the Gódávarī district, most of which are shaded by fine avenues. Of these, 580 miles are metalled or gravelled, chiefly the former. The long lead from the quarries which has in most cases to be paid for, makes it the best economy to carry the best material available, and latterly gravel has for that reason been discarded. The rest of the roads are repaired with earth and sand. Nearly four-fifths of these earth roads are in the Agency divisions of Pólavaram and Bhadrachalam, the former of which possesses less than thirty, and the latter only six, miles of metalled road. On a good metalled road a cart will carry 1,500 lb at about two miles an hour, on an earth road the load is about 1,000 lb and the distance traversed in an hour about one and a half miles. The metalled roads in the uplands are generally good, and so are some of those in the delta, but the latter have great difficulties to contend with. They have usually to be made on a rich alluvial soil saturated by irrigation water for many months in the year, and the lead for metal is nearly always long, and in some cases amounts to as many as 40 miles. The numerous navigable canals enable this metal to be transported at less cost than usual, but it often has to be carted by road for four, five and even six miles from the canal-side dépôts to the places where it is required. Moreover, floods occasionally submerge the country and do a great deal of damage, and against these it is impossible to provide entirely except at enormous expense. Finally the material available is not of the best, being only laterite of fair quality.

The metal used in the delta is obtained from the laterite quarries of Kadayam and Samalkot. The uplands are as well supplied with quarries as most other districts, and some of those recently opened yield very good metal. Ordinarily the only material available is laterite and sandstone of poor quality.

On the earth roads a hard surface crust is made by mixing sand and earth with water and then tamping the mixture with rammers. On the metalled roads the consolidation is done by the District Board's two six-ton steam rollers or by hand rollers of from two to three tons. Material is supplied, and generally spread, by contract, but the latter work is not popular and is only taken up as a necessary adjunct of a contract to supply Petty repairs are done departmentally. Road maistries are posted to every sixteen miles of road and daily labour is obtained when necessary. Gang coolies are not employed. Avenue coolies are entertained to tend the nurseries and the young trees by the road-sides. The superior establishment consists of the District Board Engineer, two Assistant Engineers, five overseers and nine sub-overseers.

The usual grant for the maintenance of the roads is some Rs 85,000. The minimum and maximum allotments per mile are Rs. 50 and Rs. 300 respectively, and the average for metalled roads is about Rs. 110. The above figures include Bhadrachalam, but that taluk has since been excluded from the operation of the Local Boards Act, and in future its roads will be managed by the Divisional Officer at Bhadrachalam.

In the delta there are few bridges. This fact, and the reason for it, are referred to as follows by Mr. Walch<sup>1</sup> —

'There is probably no artificial irrigation and navigation system, except perhaps the neighbouring one of the Kistna, in which the provision of bridges per mile of canal and channel is so small as in the Gódvári delta.<sup>2</sup> This has arisen from the fact that when the works were commenced, and for long after, there was not a single made road in the delta, and the people were accustomed to wade through the streams and water-courses which crossed their path-ways, or when the water was too deep for wading to use dug-outs or rafts.

Bridges have however been provided over the tail-bays of almost all the locks, and of late years a few have been constructed at other places at the expense, or partly so, of local funds.'

Matters have been considerably improved recently. In the delta, on the main roads, bridges have now been built over all waterways except the actual branches of the Gódvári. The minor roads, however, have received much less attention.

Outside the delta, also, some fine bridges have been built in recent years. Of these, that at Yerravaram, which carries

<sup>1</sup> *The Engineering works of the Gódvári Delta* (Madras, 1896), p. 135.

<sup>2</sup> A very remarkable contrast is presented by the Tanjore delta, where fine bridges are very plentiful.

1. the great northern trunk-road over the Yelérú river, was constructed by the late Mr P H Brown, M.I.C.E., District Board Engineer,<sup>1</sup> and was opened for traffic in 1887. It consists of sixteen spans of 32 feet with segmental brick arches on first-class coursed rubble piers and abutments. The bridge over the Tuní river at Tuní, on the same road and at the north-eastern extremity of the district, has ten spans of 30 feet. It was built over 30 years ago by the Public Works department. A fine bascule bridge crosses the Gódávári at Coringa. It is an iron construction 250 feet long with a 50-foot drawbridge in the middle, and is built on solid iron piles four to five inches in diameter and screwed down to from 30 to 45 feet below mean sea level. This also was designed and erected (in 1901) by Mr Brown. The drawbridge consists of two bascules which when raised afford an opening of 50 feet for sailing ships. There has been no difficulty in passing through it the largest ships which can enter the river, which run up to 500 to 600 tons. As originally constructed, it took eight men to open and close the bascules, but recent improvements designed and carried out by the present District Board Engineer Mr C J Lowry, enable each span to be easily opened and closed by one man. The flooring is of steel trough plates except over the drawbridge, which is floored with teak.

The only bridge across the Gódávári is that at Rajahmundry which carries the Madras Railway and is described below. Foot passengers are allowed to cross it. There is no separate footway, but it is floored and provided with a hand-rail, and there are refuges on every pier where people can wait for a train to pass.

The deficiency of bridges both over the Gódávári and over the many channels in the delta is supplied by ferries. The three steam ferry boats which at present ply on the Gódávári are referred to below. Besides these there are 34 ferries under the control of the local boards, and eight more in the Bhadráchalam taluk. The local fund ferries are equipped with boats constructed by the local boards or by the Public Works department, the former contributing half the cost in the case of all natural waterways. Of these boats, fourteen are first-class, and the same number second-class, iron ballacuts.<sup>2</sup> A ballacut is a platform with hand-rails laid on

<sup>1</sup> To this officer, who was the first District Board Engineer and held that post from 1880 to 1901 the district owes the construction of most of its roads and of many minor bridges, as well as the planting of miles of fine avenues. He also erected the building now occupied by the branch of the Bank of Madras and St. Thomas' Church in Cocanada, as well as a number of other public buildings.

<sup>2</sup> Telugu *balla*, a plank and *kattu*, to tie, hence 'a platform.'

a broad-beamed punt, and is ordinarily of sufficient length and breadth to take a cart and its bullocks. The bigger river ferry-boats are large flats which will hold three or four carts with their bullocks. Long boats are used at some of the lesser ferries, and rafts laid on hollowed out palmyra trunks (called *sangadis*) at a few insignificant ones. The round boats made of hides stretched over a bamboo framework which are used on some of the rivers of the Presidency (e.g., the Tungabhadra, Cauvery and Bhavāni) are not employed in this district. Across narrow waterways the boats are propelled by poles, or, more rarely, are pulled across with the help of a rope tied from bank to bank. For crossing the wider and deeper channels, oars or (as sometimes on the Gódavari itself) sails are used.

Thirty-four of the local fund ferries are leased out by auction by the taluk boards concerned to contractors, who are allowed to charge certain fixed fees. In 1904-05 the sums paid for the right to work these ferries amounted in round figures to Rs 23,300. The eight ferries of Bhadrachalam fetched some Rs 700 in the same year. The ferry across the Vasishtha Gódavari at Kótipalli was leased for Rs 4,020 and that across the Vainateyam at Bodasakurru for Rs 2,300. All the steam ferries were sold for large amounts.

All the other local fund ferries are allowed to be used by the public free of charge. They are managed by the villagers, who arrange for some one to work each of them and remunerate him themselves. For some of them the boat or ballacut is supplied by the District Board, and in that case the village headman is held responsible for its proper treatment.

The Gódavari river is largely used as a waterway. The three steam ferry-boats mentioned above do much passenger traffic. One of them, a stern-wheel boat with compound engines, plies between Rájavólu (Rázóle) and Narasapur, another, a large boat with an upper deck, of the usual river-steamer type, travels between Rajahmundry, Dowlaishweram, Bobbarilanka, Vijésaram and Kovvur, and the third, another stern-wheeler, touches at all the ferry stations on both sides of the Gódavari between Rajahmundry and Pólavaram and has recently been run experimentally as far up as Kunnavaram, to provide communication with Bhadrachalam.<sup>1</sup> These boats are worked by crews paid by the District Board, but are generally managed by contractors who find the fuel, etc.,

<sup>1</sup> These are Kovvur, Ankarevala, Kumáradavam, Tálapádi, Sítanagaram and Górála.

- ii take the passengers' fees, and pay rent to the District Board. They are inspected by the District Board Engineer from time to time to ensure that they are maintained in a safe and proper condition. The Public Works department has one or two steamers at Dowlaishweram which are used by officials for inspections or journeys on the river

A great deal of goods and passenger traffic is also carried on the river in native sailing boats. These are generally 'dhónis,' which run up to 35 tons capacity. They go up by the Dummagudem canal referred to below when there is enough water in the river and the canal is open (usually from June to January), and travel a long way above Dummagudem. Going up stream they sail when the wind is favourable, and, when it is not, pole or, when possible, tow. Coming down stream they either sail or row, or drift with the current, rowing just enough to keep on steerage way. Rafts of timber (see below) come down the Upper Gódavari from December to May.

The project of opening up the navigation of the Upper Gódavari was first urged on the attention of Government in 1851. A vast amount of money was expended on it, but it was eventually pronounced too expensive to be remunerative, and was abandoned.

Sir Arthur Cotton, a vigorous advocate and promoter of water carriage, was the first to broach the subject. He hoped that it might be possible to provide 'still-water steam navigation from the sea to Berar,' which would be, he said, 'the cheapest line of communication in the world'. It was decided in 1853 to investigate the project, and careful and repeated examinations of the river were carried out.<sup>1</sup> The great difficulty to be overcome was the existence of three remarkable barriers of rock, forming rapids which are only navigable during floods. The first of these, which is nine miles long, begins near Dummagudem, at a distance of 143 miles from the sea, the second at Enchampalli, just below the junction with the Indrávati and 220 miles from the river's mouth, and the third, called the Dewalamurri barrier, at a point 310 miles from the sea. These barriers excepted, it was estimated that there was sufficient water in the river during nine months in the year for steamers drawing from two to four feet of water, according to the state of the river. The fall of the river is moderate, and during half the year the current was estimated to be only a mile and a half per hour, and rarely

<sup>1</sup> Among the fruits of these is Lieut. F. T. Haig's *Report on the Navigability of the River Godavery* (Madras, 1856) which contains elaborate plans and diagrams and a fund of information on the ways of the river.

to rise above three miles an hour. It was proposed to evade the obstruction caused by the barriers by cutting canals provided with locks along the side of the river past the impassable points.

The project was warmly accepted by Government, and, on their strong recommendation, was sanctioned by the Court of Directors. It was however never completed. The estimated cost of the whole scheme, which was designed to render the river navigable for 473 miles above the anicut for four or five months of the year, and to open out to traffic 300 miles of its tributaries, was £292,000. Up to 1861 £20,000 had been laid out in preliminary surveys etc. In 1863, when Sir Richard Temple inspected the works, no less than £700,000 had been spent. He recommended that the works at the first and second barriers and up to the foot of the third barrier should be proceeded with at an estimated cost of £255,000, so that navigation might be opened so far, but in October 1871, at the request of the Government of India, the whole scheme was abandoned on the ground that it involved an expenditure which did not give promise of any adequate return.<sup>1</sup>

It has never been revived. There is a fine lock and anicut at Dummagudem and a canal (two miles in length) which is still used. Cargo boats can as a rule pass through it between June and January, and small boats throughout the year, except when it is closed for repairs. At the second barrier at Enchampalli, are a partly-completed anicut and the remains of unfinished locks and excavations. The Dummagudem works were damaged in the flood of 1900, and estimates, amounting to Rs 1,26,800, for repairing them were sanctioned in 1905 and are now being carried out. It would be a great help to navigation if the canal there could be carried down to Bhadrachalam, but the work would be difficult and costly, as the excavation would be largely in solid rock.

When the Gódavari anicut was being built, it was proposed that the canals taking off from it should be so constructed that they would serve for navigation as well as irrigation. Mr Walch writes as follows on the subject<sup>2</sup> —

"Even when sending in his first general estimate with his second report<sup>3</sup> Major Cotton had said that one of the results to be expected from the works which he contemplated would be that 'a complete

<sup>1</sup> Statement exhibiting the Material and Moral Progress of India during 1872-73, p. 79.

<sup>2</sup> Chapter XI of *The Engineering works of the Gódavari Delta* (Madras, 1896).

<sup>3</sup> Dated April 17th, 1845.

II system of internal navigation intersecting the whole delta would be established throughout the year' And besides the 'head locks' the estimate included a provision of one lakh for 'sluices, locks, and other small masonry works' The smallness of this provision, which could not have been intended for more than half-a dozen<sup>1</sup> or so of even the small and inexpensive locks originally proposed, shows that there was but a very imperfect perception on the part of Major Cotton himself of what would be required to make the main irrigation arteries of the system into really efficient lines of communication. It is not therefore to be wondered at that when the detailed estimates for the various canals came in with large sums set down for locks and special arrangements for navigation, the Government should have regarded the provisions for that purpose as almost a new development of the original intentions to which sanction had been given. The Governor of the day, Sir Henry Pottinger, even went so far as to 'say I cannot shut my eyes to the fact that this is an entirely novel scheme which, so far as I recollect, had no existence in the original project for an amcut across the Gódavari.'

"But Colonel Cotton was determined that his chief canals should be made navigable and so he went on with steady insistence, loyally backed up by the officers who followed him on the delta works, till at last opposition to his views on the subject was broken down, and there are now in the Gódavari system alone nearly 500 miles of canals which, besides carrying water for irrigation, are excellent lines of communication. Nor is this all, from the Gódavari system, navigation can at three places pass into the Kistna system with its 300 miles of navigable canals, and from it again into the Buckingham Canal, which runs along the coast for 196 miles from the end of the Kistna system to Madras, and for 65 miles further south. From Cocanada to the south end of the Buckingham Canal the length of canal navigation is 450 miles.

"There cannot be the slightest doubt that the provision for cheap carriage, not only in and about the district itself but also to the neighbouring districts and to an excellent sea port, contributed largely to the rapidity with which the Godavari irrigation developed and the district sprang into prosperity. In this way the cost of the works specially required for navigation has been repaid over and over again, quite irrespective of the direct returns from boat licenses, tolls and so on."

The development of canal traffic has indeed been enormous. Sir Arthur Cotton wrote in 1852, 'I should not be surprised if, after a few years, the district be well managed and the canals kept in good order, the traffic were to average

<sup>1</sup> In his letter No. 184, dated 3rd August 1849, Captain Orr gives the number required as 10. There are now 54, exclusive of head locks.

50 tons a day'. The traffic in 1893-94 amounted to 393,725 tons, or over 1,000 tons a day, and by 1902-03 it had risen to 576,643 tons, or nearly 1,680 tons a day, that is, more than 33 times as much as that anticipated by the founder of the canal system.

It was not till 1863 that tolls were levied for the use of the canals. Nowadays a considerable annual income is derived from them. The total receipts in 1902-03<sup>1</sup> were Rs 85,600 and the total maintenance charges Rs 63,900, leaving a net profit of Rs 21,700. A navigation establishment (chiefly lock superintendents) costing Rs 448 per mensem is kept up for the central and eastern deltas belonging to this district. In 1902-03 fees were paid on 458,000 tons of displacement, and cargoes worth 230 lakhs and over 345,000 passengers were transported on the canals. Timber rafts with a displacement of nearly 119,000 tons also used these waterways.

The passenger traffic is carried in what are called *raddhri* boats, long covered craft holding from 40 to 70 passengers and entirely owned and directed by private enterprise. They are towed by regular staffs of coolies paid monthly wages and posted at stages of from ten to twelve miles in length. These boats also carry produce, and are patronized for this purpose when time is an object, as their pace averages three miles an hour. They all start from Rajahmundry or Dowlaishweram, and they constitute a regular boat service.

The cargo boats are numerous and range from 7 to 40 tons displacement. They all carry sails. Their charges for cargo are about four pies a ton a mile on the average. They are worked by crews of two or three men and one or two small boys, who tow, pole, or row the boats as convenient. On still water they can sail five miles an hour. Otherwise their pace is about three miles an hour down stream and one and a half up stream.

The timber rafts consist mostly of logs and bamboos from the forests of the Upper Gôdâvarî, which are lashed together and floated down between December and May for export. Bamboos come down in December, but timber not until January. Of a total transported tonnage of 118,632 tons, only 418 tons were taken up stream.

The canals are used to a small extent by house-boats. These are nearly all Government boats employed by officials, but there are one or two private house-boats also. The only

<sup>1</sup> These and except where otherwise stated the following, figures are for the whole delta system, including the part in Kistna district.

I steamers on the canals at present are the inspection boats of the Public Works department Mr Walch<sup>1</sup> says that —

'The introduction of steam power for the transportation of freight along the canals has often been considered, and it has to some extent been tried without success. It cannot compete with manual labour unless that becomes far less plentiful and cheap than it now is, and unless canals along the chief lines of communication be maintained *along their whole lengths and at all points* to a depth greater than is now the case. That steam or perhaps electricity will eventually supersede towing coolies on the Gódavari canals is most probable, but this will not be for many a long day.'

d The combination of irrigation and navigation in these canals is not entirely without its drawbacks. Their requirements are necessarily to some extent conflicting.

'For irrigation, large quantities of water and consequently of silt have to be taken into a canal, and therefore the slope of the surface must be considerable, for navigation the less water taken into the canal the better, and its surface should have no slope. For irrigation, there are times when the canal should be kept low so that large quantities of water may not have to be passed into the drainages when they are already filled by rain water, for navigation the canal should always be kept up to its full level. For irrigation, even when the river or other source of supply is low, it is often necessary to go on letting as much water as possible out of the canal to supply crops, thereby reducing the level and the depth in the canal, especially at its end, for navigation at such times the water should be kept in the canal so as to maintain as nearly as possible its full depth.'

These difficulties have been experienced in the Gódavari system. On the Ellore canal, which is the through line of communication to the Kistna river system, the silting was found to impede traffic, and the necessity of keeping enough water in the canal for navigation caused much tempting extension of irrigation to be abandoned. These facts were adduced in 1888 as arguments for the necessity of lightening that canal of some of its traffic and in support of a proposal for a railway between the Kistna and Gódavari rivers—a proposal which has since developed into the North-east line of the Madras Railway. As far as the present district is concerned, navigation is always subordinated to irrigation, and though every attempt is made to keep the canals full, navigation has to take its chance when water is scarce.

The only railway which traverses the district is that which was originally called the East Coast Railway but is now

<sup>1</sup> *Op. cit.*, p. 152

known officially as the North-east line of the Madras Railway (C) It enters the district from the south at Rajahmundry over a fine bridge across the Gó dá vá ri, and, skirting the north-western edge of the delta, finally runs from Samalkot parallel with the coast till it passes out of the district at Tunī From Samalkot a branch runs to Cocanada, the inhabitants of which have always protested vigorously against the chief commercial centre on the section being thus left off the main line The bridge over the Gó dá vá ri at Rajahmundry is one of the finest in the Presidency It is built of steel girders laid on masonry piers which are sunk from 48 to as much as 100 feet below low water level and stand over 44 feet above that level It has a total length of no less than 9,000 feet, or over  $1\frac{1}{2}$  miles, between abutments, and consists of 56 spans of 150 feet each It was opened to goods traffic in 1900 The railway was opened from Rajahmundry to Waltair (in the Vizagapatam district) in 1893 and the Cocanada branch in the same year

In 1904 there were altogether 110 travellers' bungalows in A the district, of which 79 were maintained from local funds, 21 by the Forest department, and ten by the Public Works department. A detailed list is given in the separate Appendix B Of the local fund bungalows, nine were in Bhadrá chalam taluk, and, since the Local Boards Act has been recently withdrawn from operation in that tract, are now managed by the Revenue department. Those maintained by the Forest department are designed primarily for the use of its own officers, but are also available for private individuals on payment of fees Nineteen of them are in Bhadrá chalam That taluk contains 29 rest-houses in all, and Chó dá varam eleven These buildings are necessarily numerous in the Agency, where only short marches are possible and tents can only be carried with difficulty Tunī and Pithá puram divisions only contain three and four bungalows respectively The accommodation in the travellers' bungalows ranges from furnished and terraced buildings to empty thatched sheds, the latter predominating With a few exceptions, the local fund bungalows are of an inferior type

There are eight endowed chattrams under the management C of the local boards, six of which have considerable incomes Their total annual revenues are some Rs 18,000 They were all bequeathed by private individuals to the taluk boards The largest is the Nallacheruvu choultry in Peddápú ram taluk, the income of which is Rs. 5,500 There, and at two other large institutions at Peddápú ram and Kottipudi, people of all

castes are fed. At two other considerable chattrams Bráhmans are fed. Three insignificant choultries are maintained by the municipality at Rajahmundry.

Private chattrams appear to exist in large numbers<sup>1</sup> in this district, and they are much less exclusively devoted to the needs of Bráhmans than is the case in some places. Indeed at several of them food (though not accommodation) is provided even for Málas. At many of them all Sudra castes are fed. Most of them, it seems, are supported by private liberality without regular endowments. Some are of a considerable size. Those at Cocanada (maintained by a Kómatu), Samalkot (by a rich Reddi merchant), Pithapuram (by the zamindar) and Kótupalli (by the Pólavaram proprietor) are worthy of particular mention. The largest of all is supported by a Kómatu at Rajahmundry. Another large one in that town, called the *chanda* ('subscription') choultry, is kept up by subscriptions from the local merchants, who set aside a percentage of their daily profits for the purpose.

<sup>1</sup> The Collector's office estimates the number of these institutions at 71.

---

## CHAPTER VIII

## RAINFALL AND SEASONS

RAINFALL FAMINE—The conditions existing—Famine in 1791—The 'Guntur famine' of 1833—Distress in 1835-38—Disasters of 1839-41—Improvement resulting from the ament—Scarcity in the Agency 1897 INUNDATIONS BY THE SEA—About 1706—In 1787—Its extent and effects—The accompanying hurricane—The landholders losses—Inundation of 1839 CYCLONES FLOODS—In 1614—In 1875 1878 1882, 1883 and 1884—Great flood of 1886—Floods of 1887 and 1891—Of 1895-96—Of 1900

THE following table shows the average rainfall in certain seasons of the year in the various taluks and in the district as a whole The seasons selected correspond roughly with what may be called the dry weather the hot weather, the south-west monsoon and the north-east monsoon The figures shown are the averages of a series of years As will be seen, records have been kept at most of the stations for more than thirty years Those where figures for only a few years are available have been entered separately and not included in the district average —

Taluk.	Station	Years recorded	January March	April and May	June September	October December	Total
Cocanada	Cocanada	1870-1903	0.93	2.36	21.98	15.60	40.87
	Coringa	1870-1903	0.58	1.95	21.09	18.67	42.29
Pithapuram	Pithapuram	1870-1903	0.50	2.19	20.41	11.36	34.46
Tuni	Tuni	1870-1903	0.96	2.74	21.39	10.70	35.79
Peddápuram	Peddápuram	1870-1903	0.65	2.41	23.22	10.52	36.80
	Prattipadu	1870-1903	0.97	2.90	23.96	9.79	37.62
Rámachandra puram	Álamár	1836-1903	0.67	2.49	23.82	12.03	39.01
	Rámachandra puram	1870-1903	0.09	2.42	24.71	14.06	41.88
Amalápuram	Amalápuram	1870-1903	0.84	2.22	25.42	16.40	44.83
	Kottapéta	1836-1903	0.58	2.38	25.01	13.90	41.87
Nagaram Island	Rájavolu (Sivakódu)	1870-1903	0.48	1.29	21.88	16.50	43.15
Rajahmundry	Rajahmundry	1870-1903	0.79	3.19	26.61	9.56	40.18
Bhadrachalam	Bhadrachalam	1875-1903	1.01	2.79	35.76	3.83	43.39
Chódevaram	Chódevaram	1870-1903	0.78	2.87	27.77	8.94	40.36
Pólavaram	Pólavaram	1870-1903	0.93	3.57	28.27	8.54	41.31
	Average for the district.		0.76	2.52	24.95	12.03	40.26
Amalápuram	Mummidiwaram	1901-1903	2.03	1.25	27.73	20.89	51.90
Yellavaram	Addatigela	1895-1903	1.41	5.86	29.85	9.87	46.99

- II It will be noticed that the first three months of the year are practically rainless. April is almost as dry. In May, showers herald in the south-west monsoon, which begins in the middle of June and brings nearly two-thirds of the total yearly fall. It is naturally heavier in the Bhadrachalam taluk beyond the Gháts than in the rest of the district. Conversely, the north-east monsoon is hardly felt in that taluk. The latter current is much weaker in this district than in many other parts of the east coast. The rain it brings generally consists of a very heavy downpour on its first arrival, and after the 15th November rain worth mentioning rarely appears. The delta benefits more from this north-east monsoon than the uplands, whereas the latter get more rain in the hot weather than the former. The annual average fall for the whole district (40.26 inches) is moderately high for this Presidency. In only eight other districts is the amount greater. Vizagapatam on the north gets rather more rain, and Ganjam a good deal more, but Kistna on the south receives much less.

The highest fall on record is that at Chódavaram in 1893, which amounted to 86.02 inches. Twenty-two inches fell in September, over twelve in June, August and October, and over nine more in July and November. In the same year 85.85 inches of rain were registered at Amalápuram. The lowest fall recorded for any station is 13.40 inches at Tuni in 1876. No rain was received from January to April or from October to December, inclusive, in that year.

The major part of the district is, humanly speaking, safe from anything in the nature of a famine. The Gódavari draws its water from vast and distant tracts and is not affected by any local failure of rain, and from the time that the anicut first made this river's supplies regularly available for cultivation, the delta has never felt the want of water. In the upland and hill tracts, however, the crops are precarious, and in the Agency the danger is aggravated by the improvidence of the inhabitants. The people there, on the other hand, are accustomed to eking out a livelihood in bad seasons on toddy, gruel made from the pulp of tamarind, jack and mango seeds, and jungle roots. The delta produces vast quantities more food than is required for the subsistence of its own inhabitants, and also provides a constant field for labour, so that no one in the uplands need ever starve for want of work if he will make up his mind to travel so far.

Before the construction of the anicut, however, the whole district suffered cruelly on several occasions from terrible famines due to drought. It was the recollection and the

effects of these visitations which suggested the idea of constructing the anicut<sup>1</sup> and induced the Government to face the expense which that project involved. Inundations from the sea have also caused much loss of life and property in the past, and so have cyclones, though no serious damage caused by either has been experienced for many years, and a fourth variety of natural disaster to which the delta is particularly subject is floods in the Gôdâvari river, which have not only been common in past years but even nowadays, in spite of the utmost efforts, frequently cause considerable loss and hardship. The various occasions on which serious disaster or suffering has been experienced from these four different causes will now be shortly referred to.

Except for vague references by native historians, there is, as usual, no record of the famines which doubtless occurred before the days of British occupation. The first visitation of which particulars survive is that which desolated the Northern Circars in 1791-92. In January of the latter year the Board of Revenue said that the extreme drought had caused a large diminution of revenue and that 'though every alleviation in our power has been afforded by the suspension of duties on grain as well as on all necessities of life, and every exertion is making by the Collectors to discover and distribute for the general consumption such grain as may be hoarded up by individuals for their private advantage, yet many of the poorer class of inhabitants are perishing from want'. Application was made to the Government to sanction the importation of rice from Bengal, and 'every effort seems to have been made by Government and individuals for affording temporary means of subsistence to the poorer class of people,' but in April 1792 the sufferings of the inhabitants still continued 'with little prospect of immediate relief'. Numbers had died and numbers more had emigrated, and the Board feared that the decrease of population and cultivation would long be felt.

At that time a large sum was due to pensioners in the zamindaris of Masulipatam, and Government ordered that any balance of this which remained unclaimed at the end of a month from the date of notice to that effect, should be devoted to relieving distress. Over 35,000 pagodas (Rs. 1,40,000)<sup>2</sup> were applied to this purpose, and the children of the poorer families were collected and fed at the public expense. Large remissions were also granted to the zamindars and extensions of their leases were sanctioned.

<sup>1</sup> See Chapter IV, p. 80

<sup>2</sup> It is assumed that the pagoda was the local pagoda of four rupees.

i The famine appears to have lasted from November 1790 to November 1792.<sup>1</sup> Its effect on the people was terrible. It was computed that one-fourth of them either emigrated or fell victims to starvation.<sup>2</sup>

ii In 1833 a succession of unfavourable seasons culminated in the great 'Guntur famine'. Though this did not affect Gódavari so severely as the neighbouring district of Guntur after which it was named (where 'it covered the country with human bones from Ongole to Masulipatam'<sup>3</sup>) yet so deeply did the remembrance of it enter into the hearts of the people that it afterwards became an era from which they reckoned dates. The author of the original *Manual* of this district, who knew the country well, says 'I have frequently asked a man his age, and he has been unable to state it, but he was quite ready to answer the question how old were you at the time of the Great Famine?'

The hardships appear to have begun with a hurricane in May 1832, which 'destroyed much produce stored, a large number of cattle, and many cocoa, palmyra and betel nut trees'.<sup>4</sup> This was followed by a failure of rain in western India and a consequent lack of freshes in the Gódavari, so that the paddy crop usually grown along the banks of that river was lost. A temporary rise of the river in the early part of the season had induced the ryots to commence this cultivation, and their disappointment was thus the more bitter. Gódavari, however, did not suffer either so soon or so severely as the districts to the south of the river. As late as April 1833 the Collector was able to report that though a great influx of distressed people had taken place from Masulipatam and Guntur, and great distress prevailed on account of the high price of grain, yet 'the miserable creatures that everywhere meet the eye are principally other than the local inhabitants'.

But from that time forward matters gradually became worse. The contributions cheerfully given by the wealthier Europeans and natives were quite inadequate to the needs of the case. From March 1833 to the end of July private subscriptions enabled about 3,000 people to be fed every day, and it was hoped that a good monsoon might render Government relief unnecessary. But these hopes were disappointed, and assistance had at length to be demanded from the State.

<sup>2</sup> General reports of the Board of Revenue (Madras, 1871) II, 130, 143, 145 in § 22 31 53, 73.

<sup>3</sup> *Statistical Atlas* p. 84.

<sup>4</sup> P. 288.

<sup>5</sup> Sir Henry Montgomery's report, dated 18th March 1844, para. 30.

Relief-works, chiefly the digging of tanks, were opened in August, but gratuitous relief was prohibited, and many of the higher castes preferred to starve rather than demean themselves by doing earth-work. The relief afforded seems in any case to have been quite inadequate to the distress. Thousands of persons emigrated to Madras and to other more fortunate districts. 'A stream of pilgrims flowed night and day towards the south. The great northern road soon became one long graveyard. It was often most difficult to distinguish between the dying and the dead.'<sup>1</sup> Young girls were sold and sent away to Hyderabad, the scarcity of water added the torments of thirst to those of hunger, and grain could not be transported without armed escorts, since the villagers turned out *en masse* when they heard of the approach of grain merchants with a convoy of food, and tried to obtain possession of it by force. Happily the famine did not last more than a year, and seems to have come to an end before the beginning of 1834.

The two following seasons were favourable, but there was a general failure of the monsoons between 1835 and 1838. In the first of these years the early rains were deficient and yet many of the crops were destroyed by inundations, in the next there was continued drought, and in 1837-38 the early showers again failed and the later rainfall was excessive.<sup>2</sup> The year 1838-39 is described in the report of Sir Henry Montgomery, who based his statements 'on his own observations, and enquiries from persons of all classes, confirmed by the periodical reports of the different Collectors,' as one of 'extreme distress little less than famine, equal if not exceeding in calamities that of 1832-33.' This however seems to have been an over-statement of the case. Want of sufficient rain ruined the 'white' paddy crop, and though in December a few showers saved the cholam harvest near Rajahmundry, in the north of the district that crop was lost too. Small relief works (the deepening of tanks) were started by private philanthropy in Rajahmundry, and these were taken over by Government in February 1839, in which month 450 persons were daily employed upon them. Relief-works were also started at Samalkot in March. In June, good rain put a stop to the sufferings of the people. Altogether only Rs 6,156 were spent on public relief, so the scarcity appears to have been far from severe. Two factors united to prevent more serious results: the area affected was not large, and the price of grain was kept down by liberal importations by sea.

<sup>1</sup> *District Manual*, p. 289.

<sup>2</sup> Sir Henry Montgomery's report already quoted, para. 30.

I The season of 1839-40 began propitiously, but towards the middle of the year the district was visited by the disastrous cyclone and inundation referred to below. In 1840-41 'the early rains were again wanting, the north-east monsoon failed, and sickness was prevalent.'

t This unfortunate cycle had thus lasted twelve years, and Sir Henry Montgomery summed up the case by saying that of these twelve 'five were marked by peculiar distress and three were bad'. The population, which in 1821 had amounted to 738,308, had decreased by 1839-40 to 533,836. Gódvári fell into a state even more miserable than that of the Northern Circars generally at that time, and at length Sir Henry Montgomery was deputed to take charge of the district as Special Commissioner<sup>1</sup> and to report what could be done to raise it from its lamentable state of depression. His report, as has already (p. 80) been seen, resulted in the construction of the anicut at Dowlaishweram, which changed the whole face of the delta and delivered it from any future fear of famine. No general distress has been experienced since it was built. Even the great famine of 1876-78 did not seriously affect this district, and men and cattle fled to it then in large numbers from the famine-stricken tracts in Kurnool, Bellary and Nellore.<sup>2</sup>

In 1896-98 failure of the monsoons caused a good deal of suffering throughout the Agency, especially in Bhadráchalám and Pólavaram. Indeed the jungle people were perhaps harder hit by this famine than by that of 1833. The Rev. J. Cain of Dummagudem describes a conversation with an old man who remembered the latter, and who compared the two by saying, 'There were fewer of us then, and the forests had not been cut down, and there were plenty of roots.'

In 1896 Bhadráchalám and Yellavaram suffered from short rainfall, but a remission of 50 per cent. of the dry assessment was sufficient to enable the ryots to last out till the end of the year 1896-97, and no relief was necessary.

Things were much worse in the following year. The south-west monsoon stopped on the 18th June, and distress amounting to famine in Bhadráchalám, and verging upon famine in Pólavaram, was the result. Yellavaram and Chódavaram had rather more rain, and in these all that was needed was to assist for a short time a few aged or infirm people, who could not support themselves and had no one to maintain them. In Pólavaram and Bhadráchalám it was necessary to open

<sup>1</sup> See Chapter XI, p. 167.

<sup>2</sup> B. P. (Rev. Sett., L.R. and Agri.), No. 431, dated 12th March 1896 p. 12.

relief-works. Matters were made worse by the fact that, acting on a general belief (encouraged by the astrologers) that three whole years of famine were impending, the sowcars refused to give the hill people the usual advances on the security of their crops upon which they generally subsist in the interval between sowing and harvest.

Relief-works were opened, but, except in Bhadráchalam, the hill men absolutely refused to come to them. In Pólavaram they preferred to help themselves in their own lawless manner by plundering their richer neighbours. Collecting in gangs, they looted no less than 39 villages in seven days, and, as the local police were afraid to act, order was not restored till the District Superintendent of Police arrived with the Reserve, and marched a number of the rioters off to prison. The villagers had not resisted the robbers, so no blood had been spilt, but it was estimated that property worth Rs 10,000 had been stolen during these riots. Meanwhile in Bhadráchalam works were opened in May 1897 and a fair number of Kóyas attended them.

Gratuitous relief was given on a large scale in this taluk, but to a less extent in the rest of the Agency where either the distress was not so acute, or the hill men had helped themselves by robbery. In Bhadráchalam nearly Rs 12,000 were distributed in this way, and nearly Rs 17,000 were spent from charitable funds when the distress was at an end in buying seed-grain, cattle, etc. and selling them at low rates to the impoverished people to enable them to start cultivating again.

It was not in the Agency alone that the pinch of these years was felt. Test works had to be opened in Rajahmundry and Cocanada taluks and in Ellore, then a part of this district, and nearly Rs 7,000 were spent on works in these three areas. A little gratuitous relief was also given in Rajahmundry, and a poor-house was established at Cocanada.

Inundations of the coast by the sea occurred fairly frequently in former times, and Mr Topping, the astronomer, when making enquiries about them in 1789, found that they were so well known as to have a definite name, being called *uppena*.<sup>1</sup>

The earliest of which any record survives occurred in December about the year 1706, but all that is known of it is derived from the oral testimony of a very old man some eighty-three years later. The wind had been blowing very hard from the east for two days and the sea burst upon the

<sup>1</sup> *Selections from the Records of the Madras Government, No XIX (Madras, 1855), 23.*

land during the night. A few lives were lost in the neighbourhood of Coringa, innumerable trees were blown down, the paddy was ruined, the springs of fresh water were spoiled and quantities of salt were deposited upon the flooded ground.<sup>1</sup>

The next inundation which occurred was that of May 20, 1787. This was so extraordinary in its violence that it was commonly supposed to have been due to an earthquake, but Mr Topping<sup>2</sup> ascribed it firstly to a 'violent and long-continued gale' from the North-East at a time when the South-West Monsoon should prevail, and had actually set in many weeks previous to it, checking the Northerly current and forcing the waters back upon the coast', secondly to 'the configuration of the coast itself, peculiarly favourable to such an accident at such a crisis,' in particular 'the sudden projection of Point Gardewar (Gódávári) and the situation of Coringa in the recess or *cul de-sac* of a bay', and finally to the fact that the inundation occurred at the spring tides of the new moon. 'In short there happened at that fatal juncture a union of almost every cause that could have a tendency to elevate the waters of the Sea.'

Pitiable details of the havoc wrought by this hurricane and flood are to be found in the correspondence from the then Chief and Council of Masulipatam.<sup>3</sup> Coringa island and the country near Injaram were flooded, and so was Narasapur. The hurricane raged with increasing violence from the 16th of May onwards. On the 20th 'about ten in the morning,' writes the Resident of Injaram on the 22nd and 23rd May —

'The sea rushed in upon us and inundated everything. On the morning of the 21st everything was desolation. The whole town of Coringa and all the little villages about, with the inhabitants, (were) carried away. Nellapillee is in not much better state. As yet I cannot ascertain what loss the Hon'ble Company may have sustained, but I suppose it is in proportion to the loss of individuals, which in fact amounts to everything we possessed. The poor black people are now running up and down crying and lamenting the loss of relations from the inundation. The springs and wells all around are choked with salt water, and we have only to depend on the heavens for a supply of fresh water. Cattle, grain and everything carried away. I now request in the most earnest manner that you will with the utmost despatch send to this place by *dónis* or any other sea conveyance what quantity of grain you may be able to collect.

<sup>1</sup> *Selections from the Records of the Madras Government*, No. XIX (Madras, 1855), 23.

<sup>2</sup> *Ibid.* p. 29.

<sup>3</sup> This blew for six days without intermission.

<sup>4</sup> See Extracts from the Public Consultations, pp. 1152-59 and 1202-10.

The remaining part of the black inhabitants, who escaped from the inundation of the sea, are now dying by dozens for want of food, and, if we do not receive supplies very soon, very soon there will not be a native alive in the Nillapillee bavelly

His letters also contain a distressing account of the sufferings of the European men and women in the place, all of whom, however, escaped with their lives. Five hundred bags of rice and other provisions were despatched to Injaram from Madras before the end of the month, and this terminated the immediate sufferings of the natives. Further down the coast, the inundation was much less felt, and the reports from Narasapur complain less of it than of the hurricane.

This hurricane not only wrecked a great number of ships along the coast but was also felt far inland. As far north as Yernagudem (now in the Kistna district) the camp of a detachment of sepoy was completely wrecked. 'The trees under which the tents were, fell upon them and tore them to pieces,' writes an officer on May 23rd. 'With the greatest exertion the ammunition was saved. The men were flying about like footballs endeavouring to find the village. Lieutenant Cuninghame and I very nearly lost our lives in the same attempt. When we reached the village (we) found nothing but the walls of the houses and the greatest misery among the inhabitants.' A similar story is told of the effects of the storm at Samalkot. 'This dreadful hurricane has not left a roof standing even to the Commanding Officer's house. A range of barracks for two battalions, the guard-room and several other buildings are level with the ground.' So great was the force of the wind that near Yernagudem scarcely a tree was left standing, and at Narasapur for some time no one could stand upright.

The zamindars suffered very considerably from this visitation, but they seem all to have much overstated their losses in order to support extravagant demands for remissions of revenue, and the real amount of these seems never to have been even approximately ascertained. An officer who was directed to enquire into their extent in this district assessed them at over sixteen lakhs, but his data were of a very doubtful character, and both the Council of Masulpatam and the Board of Revenue considered his estimate 'entirely inadmissible.' In the end no remissions were given, but forbearance was shown in the collection of the kists.

In 1839 a cyclone raged all along the coast from Vizagapatam to Narasapur. It was accompanied by a tidal wave which burst upon the shore and inundated Cocanada and Coringa. Much of the shipping was driven on shore, some of

the wrecked vessels being carried, it was said, four miles inland. The loss of life and property was very great. The merchants' storehouses at Coringa and Injaram were ruined, cattle and crops were destroyed, large tracts of land were rendered unfit for cultivation by the salt water, and the tanks and wells were rendered brackish from the same cause. The force of the wind was also most destructive. Very many of the native houses in Samalkot were blown down, all the European houses except two were unroofed, and even in Rajahmundry some of the houses were nearly dismantled by the violence of the storm.

Since then no serious inundations from the sea have occurred in this district. The destructive tidal wave which desolated Masulipatam just a quarter of a century later did not affect Gódavari.

The inundations just described were usually accompanied (if not caused) by violent storms, and some of these were doubtless cyclonic in nature. In more recent times, four cyclones occurred in the ten years preceding 1878, all in the months between September and December. In November and December 1878, two others arrived which caused the sea to rise dangerously at Cocanada, destroyed a good deal of cultivation there, submerged some of the huts near the creek, blew down a number of mud houses and trees, and killed many cattle. In October 1904 a cyclone swept across the whole country levelling many trees in the Agency and thousands of cocoa and areca palms in the coast taluks. So universal was the damage to plantain gardens that plantains had actually to be imported from Tanjore. Since that year no violent cyclone has visited the district, but the barometer is always carefully watched in the months (September-December) when they are most to be expected.

The fury of the Gódavari in full flood has always excited the wonder of those who have seen it. The irresistible torrent which pours through the deep gorges in the hills through which it forces its way has been referred to on p. 5. Sir Henry Montgomery, when pressing for the construction of an anicut across the river, could not deny that 'the Gódavari, when filled as it was in the early part of the present season (1843-44), is a fearful stream, overflowing the country through which it passes and carrying before it all impediments to its course'. Before the anicut was built and attempts to control the river were begun, destructive floods seem to have been constant, and even now, as has been more than once said, they occur every now and again.

The earliest of which any record is extant happened in and about Narasapur in 1614. The account of an English merchant, quoted in Sir H. Montgomery's report, says 'In August there happened a greater overflow than had been seen in twenty-nine years. The whole Salt Hills, Towns, and Rice were drove away and many thousand men and cattle were drowned, the Water rising three Yards above the high way.'

The damage done by floods in later years to various parts of the anicut system has already been briefly noticed in Chapter IV.

The flood of July 1875, 'the greatest fresh that has occurred in the Gódávary since the extraordinary floods of 1862 and 1863,' did no great damage to the crops, though there were three breaches in the embankment of the Vasíshta Gódávary.

That of August 1878, however, breached the head-sluice of the Bobbarlanka canal and submerged a large extent of land in the Amalápuram taluk. That taluk was 'mostly flooded and was at one time in imminent danger, so much so that it was considered advisable to remove the people to the high lands. But the timely action taken by the Department of Public Works saved the people and their property.' The crops suffered much less than was expected, and only Rs 8,000 had to be remitted.

In June 1882 a destructive flood in the river inundated a large tract of country in Amalápuram and Nagaram, and did much harm to villages and crops. In Nagaram six villages were entirely, and eight partly, submerged. On the Kistna side of the river the damage was even greater. The engineers again exerted themselves to the utmost to save life and property, and the loss of crop was not very large.

In August 1883 a breach in the Vasíshta Gódávary caused considerable damage to the crops in Narasapur.

A dangerous flood occurred in the Gautamí Gódávary in August 1884. Some 300 houses valued at Rs 11,500 were washed away, other property worth Rs 18,200 was destroyed in the villages of Pillanka and Mallavaram in the Rámachandrapuram taluk, and 23 villages were submerged between the river and the Injaram canal. The damage to crops was estimated at Rs 30,000, and serious breaches were made in the Kótupalli road.

The highest flood on record occurred in August 1886. The river was 14.5 feet deep on the anicut on the night of the 19th. By noon of the 20th it had risen to 16.2, and by 5 A.M. on the 21st to 16.9 feet, above the anicut, or  $1\frac{1}{2}$  feet higher than any previously recorded flood. By 10 that night it had fallen to 16.5, by 6 A.M. on the 22nd to 16, and to 14.6 on the following

morning The outer wall of the Dowlaishweram lock was carried away, and a breach 250 yards long was made in the bank of the main canal, which resulted in the whole of the south-eastern corner of the Rajahmundry taluk being submerged Many breaches also occurred in the central delta, the worst being in the Gannavaram canal, and whole tracts of country were under water Fortunately, the inhabitants, with very few exceptions, succeeded in making their escape to natural eminences and the river and canal banks The river also breached its bank near Pólavaram, flooded Pólavaram, and did a great deal of damage there and in Tállapudi and some other villages

The loss of crop was again nothing like so great as at one time seemed likely It was estimated that the damage in Amalápuram and Rámachandrapuram was Rs 48,000, and that houses in those taluks and Rajahmundry had suffered to about the same extent In the district as it was then constituted Rs 16,500 of land revenue and Rs 45,000 of water-tax were remitted, and damage estimated at Rs 15,000 was done to the flood-banks, canals and channels

In July of the next year a high flood lasted for about twelve days The river was 15·8 feet above the anicut on the 19th A number of breaches occurred in the left bank of the Vasishta and a large one in the Vainatáyam, and some 2,200 acres of wet crop were lost This was mostly replanted again and the remission of revenue on account of the submersion of crops amounted to only Rs 6,400.

On October 3rd, 1891, the river attained the unparalleled height of 16·9 feet above the anicut, but no breaches occurred A flood of only 12·9 feet in September of the following year breached the Cocanada and Samalkot canals (the latter in thirteen places) as well as the river flood-banks above the anicut. Scarcely any harm was done to the crops, but the budget allotment for repairs to the delta works had to be increased by Rs 30,000, chiefly on account of the repairs rendered necessary on the Samalkot canal

The crops in Amalápuram and Rámachandrapuram suffered from floods in 1895, but this was owing to excessive local rainfall, and not to the action of the river Twenty inches of rain fell in 24 hours in Amalápuram on the 6th September Remissions of revenue amounting to Rs 10,000 were granted for submersion in these and the Rajahmundry taluks, and roads and trees suffered much more than the crops

More serious damage was done by the river next year Rising to 13·8 feet above the anicut on the 2nd August, the water made a large number of breaches in the canal and river

banks, and rising again to 137 on the 16th much increased the harm already done

The last of this long list of calamities occurred in 1900 . Before daylight on the 14th August the river overtopped the lock and canal banks at Dummagudem and completely flooded out that village, driving the inhabitants to the higher ground and drowning a few women and children . It breached its bank near the Vijésvaram anicut and did great damage to the works of the western delta in the present Kistna district , and the central delta was inundated through numerous breaches in the Gautami, Vasishta and Vainatáyam . Little harm was done to the eastern delta, though parts of Rajahmundry taluk were inundated by a breach in the flood-bank . The repairs to the breaches had not been finished before a slightly higher flood on the 22nd September (15·8 feet over the anicut) opened many of them again . The damage done to the delta and Dummagudem works was estimated at Rs 10 lakhs . Only about Rs 40,000 had to be remitted for submerged crop in the present district . The taluk worst affected was Amalápuram, where 4,000 houses were destroyed and some 70,000 acres of land were more or less damaged.

---

## CHAPTER IX

### PUBLIC HEALTH

---

PREVALENT DISEASES—*Malaria, in the Agency—In the uplands—In the delta—Cholera—Small pox—Other diseases—Sanitation* MEDICAL INSTITUTIONS  
—*Public hospitals and dispensaries—Mission institutions—Institutions in Cocanada—Rajahmundry hospital*

THE most noticeable of the diseases which afflict the district is malaria. This is worst in the Agency. The Gháts there are densely wooded and the valleys are filled with a tangle of damp jungle, so that during the rains the country is eminently suited to the propagation of the malaria-bearing mosquito. Beyond the Gháts, the lower parts of Bhadrachalam appear to be equally malarious, the villages along the valley of the Saveri river and those lying between it and the Rékapalle hills being the worst parts of the taluk.

Even the Kóyas, who have resided for untold generations in the Agency, are not immune to malaria. The disease is said to be chronic among them, and its effects are particularly noticeable in the case of the children. People from the plains suffer far more severely, however, and from the earliest times up to the present day the country has retained a most unenviable reputation for its unhealthiness. The Board of Revenue referred to its 'putrid fever' as far back as 1794, and of the party of 25 men who were recently engaged in inspecting the forests of Rékapalle preparatory to the preparation of the working-plan for their exploitation, almost all subsequently suffered from low fever of a malignant and lingering type, several were dangerously ill, and as many as one-fourth died. It is characteristic of this malaria that it does not as a rule show itself when the victim is in the hill country, but appears in all its virulence as soon as he descends to the plains. One explanation of this fact avers that the system is braced to resist the disease by the cooler air of the hills, but as soon as the patient reaches the hotter plains becomes relaxed, and allows the latent malaria to obtain the upper hand. The agency malaria is generally said to be more prevalent in the cold than in the hot weather, but no season of the year is free from it.

The upland taluks adjoining the Agency also suffer, though to a much less extent, from malarial fever. In 1869-70, before the advent of the theory that all malaria is conveyed by the anopheles mosquito, elaborate enquiries were made as to the prevalence and causes of the disease in these parts of the district, and the Sanitary Commissioner arrived at the conclusion that the fever in the plains was due to the northerly winds which sweep over the malarious forests of the hill tracts. He pointed out that the taluks which were most open to breezes from the sea had the least fever while those which were most exposed to wind blowing across unhealthy jungles had the highest ratios of sickness and death from malaria.

The question had also been raised at that time whether the great increase of irrigation under the recently-constructed anicut was in any way responsible for the insalubrity of the district. It was known that in some places (the Punjab, for example) irrigation was invariably accompanied by malaria. Enquiries were therefore directed at the same time to the elucidation of this point. The conclusion arrived at was that the irrigation had had no effect upon the prevalence of malaria. The result of five years' registration of vital statistics 'demonstrates in a very clear manner that the intensity of fever in any taluk has no relation to the extent of irrigation of the land, but is solely due to its geographical position and its exposure to malarious winds during the north-east monsoon'. The irrigated taluks were in fact found to suffer in very varying degrees. For five years the death-rate in Rámachandrapuram taluk had been 11.9 per thousand, while in Amalápuram and Narasapur it was 6.5 and 4.6 per thousand respectively. The difference was attributed entirely to the position of the taluks, the former being exposed to winds from the north, while the latter are swept by sea-breezes.<sup>1</sup> Theories regarding the dissemination of malaria have doubtless changed since those days, and vital statistics in rural areas are seldom sufficiently accurate to afford a firm foundation for debatable propositions, but the fact remains that the delta taluks (unlike irrigated areas in some places in this Presidency—the valley of the Tungabhadra, for example) are not greatly subject to malaria and are, in fact, the part of the district in which it is least prevalent.

Cholera, however, is endemic throughout the delta. It is chiefly conveyed from place to place along the lines of communication, that is, by the movement of persons affected with

<sup>1</sup> Proceedings of the Madras Government, Public Department, June 14, 1871 and G.O. No 143, dated 30th December 1872.

it, and by the irrigation channels, which are used for drinking purposes. At times the disease has broken out in a very serious manner. In 1892 as many as 13,600 persons died of it in the Gódávári district as then constituted, and in 1878, 1879 and 1889 its victims numbered between nine and ten thousand. But such visitations have been rare, and, though in nearly every one of the last 35 years cholera has claimed some victims, the number of these has, as a rule, been less than that even in less populous districts. It exceeded one thousand in 17 of the 32 years between 1871 and 1902 inclusive, but on only four occasions was it higher than in any other district.

The ravages of small-pox have on the whole been less serious than those of cholera, but on more than one occasion they have been very grave. In 1878 over 18,000 persons died of the disease in the district as then constituted, and in 1884 over 11,300. In six of the 32 years between 1871 and 1902 more deaths occurred from small-pox in this district than in any other, in fifteen of these years the mortality exceeded one thousand, and in only one year did it fall below one hundred.

A serious epidemic of the disease broke out in the delta taluks and the Tuni division in 1900, and after that compulsory vaccination was extended to a number of the unions. It is now in force in the municipalities of Rajahmundry and Cocanada and the unions of Dowlaishweram, Amalapuram, Kottapéta, Peddapuram, Rámachandrapuram, Pithapuram and Tuni.

Certain other less virulent diseases are common in Gódávári. Dysentery and diarrhœa are frequent, but perhaps not more so than elsewhere. Elephantiasis and hydrocele are also prevalent, and the town of Peddapuram has a bad name for the former. Guinea-worm is rare. A few cases of black-water fever have occurred in the Bhadrâchalam taluk. A peculiarity of the district is the prevalence of beri-beri, the Telugu name for which is *abbu vayuvu*. Though endemic in many localities, it is frequently epidemic, and it is commonest along the coast. It is said to confine its attacks to males and to be most frequent among the middle-aged.

A good deal has been done in the municipalities to improve sanitation, and with satisfactory results. In rural villages, as in other districts, matters are still backward and even the state of the unions leaves much to be desired. The difficulties are greatest in the delta, where the pressure of cultivation leaves little waste land round the village sites and the population is thickest. Drinking-water is also usually

obtained there from the irrigation canals, which are liable to pollution. The water-works recently constructed in Cocanada municipality are referred to in Chapter XIV.

The public medical institutions in the district comprise seven hospitals and seventeen dispensaries. Of these, two hospitals and a dispensary are maintained by the municipalities, and the rest by the local boards. Statistics regarding all of them will be found in the separate Appendix to this volume.

Besides the above, the missions maintain several medical institutions. The American Lutheran Mission at Rajahmundry keeps up a dispensary for women and children in which some 3,000 cases are treated annually. Connected with the dispensary is a small hospital, and the erection of a larger one has been resolved upon. The Canadian Baptist Mission manages, and in part maintains, the Kellock Home for lepers at Rámachandrapuram, which was founded in 1899 by the liberality of Mrs Kellock, the widow of Dr Kellock, a Canadian Baptist. At the end of 1904 the patients attending it numbered 94. It contains three large wards for men and a smaller one for women, and is owned, and largely supported, by the Mission to Lepers in the East. At a distance of a mile from it, is the Phillips Memorial Home for the untainted children of the lepers, which was erected from the subscriptions of the children attending Sunday schools in Great Britain in memory of the first Secretary of the Indian Sunday School Union. The Canadian Baptist Mission also has a dispensary at Rámachandrapuram, and is erecting at Pithapuram a hospital to contain 21 beds.

The medical institutions in Cocanada town comprise a hospital, a branch dispensary and a dispensary for women and children.

The first of these is situated in the suburb of Jagannáthapuram. It was founded in 1856 and has 32 beds for male, and 14 for female, patients, in the out-patient department is a room with six beds set apart for Europeans. The main block is well ventilated and lighted, but there are no caste, or special contagious, wards. The hospital is jointly maintained from Provincial, local, and municipal funds. It is in charge of a Commissioned Medical Officer aided by an Assistant Surgeon and two hospital assistants, and is under the general control of the municipal council.

The branch dispensary in the same town was founded in 1888 and is maintained by the municipality. It treats over 20,000 patients annually. The building was erected in memory of M.R.Ry. Kommureddi Narasinga Rao by his son.

The dispensary for women and children at Cocanada was established in 1895 and the attendance is over 11,000 annually. Its expenditure is nearly all met from local funds and it is under the control of the District Board.

The Rajahmundry hospital has been in existence since 1854. It contains twenty beds for men and twelve for women. The attendance is larger than that at any other medical institution in the district, and compares favourably with the figures for most of the mufassal institutions in the Presidency. Its expenditure is met from municipal and local funds, it possesses an invested capital of Rs 5,560, is under the general control of the municipality, and is managed by a Civil Surgeon and two hospital assistants.

---

## CHAPTER X

## EDUCATION

CENSUS STATISTICS—By taluks—By religions. EDUCATIONAL INSTITUTIONS  
 —Early beginnings—Schools now existing—The Government college Rajah-  
 mundry—The Government training college, Rajahmundry—The Pithapuram  
 Raja's college

SEVENTY-SEVEN in every thousand of the male, and 7 per mille of the female, population of the district can read and write. The figures are greatly reduced by the inclusion of the Agency, where education is at a discount and only 30 per mille of the males and three per mille of the other sex are literate. Excluding this tract, they come to 83 and 8 per mille of the two sexes respectively, or about equal to the average in the plains of the east coast districts taken as a whole. Taking the statistics for the taluks separately, it is found that the highest figures in the lowlands are those of Rajahmundry (105 and 15) and Cocanada (103 and 12), while the lowest are those of Peddápúram, namely 51 and 3. In the Agency all the figures are very low, but Bhadrachalam and Pólavaram take a far higher position than Chodavaram and Yellavaram. In this last only 11 per mille of the males and 1 per mille of the females can read and write.

If the statistics of literacy among the adherents of the chief religions are examined, it will be found that both the Muhammadans and Christians are far better educated than the Hindus. Among the Hindus, the literate persons per mille of the male and female population, respectively, number 74 and 6, among the Musalmans, 180 and 20, and among the Christians, 400 and 317. It will be noticed that these last are the only people whose girls have received an education in any way equal to that given to the boys.

Gó dávarí was the pioneer among the Madras districts in educational matters. As far back as 1826 the Collector, Mr Bayard, under instructions from Government, established schools at both Rajahmundry and Cocanada, but these were both abolished after a short life of ten years. In 1854, the year when the Court of Directors issued its memorable despatch about education, Mr George Noble Taylor, who was the Sub-Collector of the district as it then existed, and

resided at Narasapur, formed a society at that town for the purpose of advancing education, and established schools in Narasapur (the nucleus of the existing Noble high school) and three others of the chief towns of his charge, all of which were supported by local subscriptions. His system spread throughout his subdivision, largely owing to the interest taken in the matter by the ryots themselves. Attracted by the novelty of the institutions already established, they applied to Mr Taylor to open primary vernacular schools in a number of villages, and proposed to defray the cost by a fixed annual addition to the revenue demand of each village at the time of the annual settlement, which should form a permanent fund to be applied solely to educational purposes. The movement was brought to the notice of Sir Walter Elliott, then Commissioner<sup>1</sup> of the Northern Circars, who recommended it warmly to the attention of Government, and a scheme was ultimately sanctioned by which this addition to the revenue demand was levied in the three taluks of Mogalturru, Tanuku and Undi (all now in the Kistna district) and schools were maintained from the proceeds<sup>2</sup>.

The higher educational institutions now in existence in the district comprise three colleges (namely the Government arts and training colleges at Rajahmundry and the Pithápuram Rája's college at Cocanada), seven upper secondary schools for boys, and 53 lower secondary schools, of which eighteen provide ordinary instruction for boys, fifteen similar instruction for girls, and twenty are Sanskrit schools for boys. There is only one district in the Presidency (Tanjore) in which there are more colleges, and only four where there are more lower secondary schools. The number of pupils under instruction in these two grades, and also in the upper secondary schools, is also very much above the average. Primary education, on the other hand, both in the number of institutions and of pupils, is considerably below the average of other districts. Detailed statistics regarding the subject will be found in the separate Appendix to this volume.

The most important educational institution in the district is the Government college at Rajahmundry. This was originally established by Government in 1853 as a Zilla school for imparting instruction to the children of the four districts of the Northern Circars up to the present secondary standard. In 1868 it was raised to the rank of a Provincial school, but owing

<sup>1</sup> See Chapter XI, p. 169.

<sup>2</sup> The correspondence will be found in *Selections from the Records of the Madras Government No. XXVI.*

to various unfortunate circumstances it remained in effect a Zilla school till 1873, when an F.A. class was started. A B.A. class was formed in 1877 and the Provincial school became a first-grade college. It is now one of the three first-grade colleges in the Presidency which are Government institutions, the other two being the Presidency college and the college at Kumbakonam. The high-school classes were discontinued in 1885. The college was affiliated to the University in 1891 in mathematics, physical science and mental and moral philosophy.

The institution is entirely supported from fees and Provincial funds. It is managed by a European Principal (an officer of the Indian Educational Service), who is under the control of the Director of Public Instruction, and its assistant staff consists of three lecturers, all officers of the Provincial Educational Service, six assistant lecturers, three munshis for Telugu, Sanskrit and Hindustani, and a gymnastic instructor. A carpentry class is also attached to it, where the students work out of college hours under the guidance of a qualified mechanic. Its total strength is about 230, of whom some 160 are reading in the F.A., and 70 in the B.A., classes. The fees are Rs. 40 each term for the B.A. course, and Rs. 32 for the F.A. Over 200 of the boys are Bráhmans.

A hostel, rented from private persons, is attached to the college, and in this Bráhman students are boarded and lodged. It is under the direct control of the Principal, assisted by a Superintendent and two members of the college committee, and has a manager who attends to the details of its working. The boarding fees vary from Rs. 7 to Rs. 9 a month, according to the market price of rations, and the building accommodates fifty boys. Arrangements are being made for the construction in the college compound of a hostel for all classes. The students in the college come from the four districts of the Northern Circars, but the majority belong to Górávari.

The college is endowed with three annual prizes founded in honour of, and called after, respectively, the late Mr. B. H. Young, formerly Executive Engineer of the district, and two former head-lecturers of the college, the late M. R. Rys Sundara Rao and Subrahmanya Aiyar. Two scholarships are given by M. R. Ry. G. V. Subbaráya Sāstri, at present Assistant Inspector of Schools, Guntúr Division, in memory of the late M. R. Ry. B. Gavara Rázu, B.A., of this college, after whom they are named. Their value is respectively Rs. 60 and Rs. 30 per annum, and they are given, on the result of

a competitive examination held every alternate year, to necessitous students of the Junior B.A. and Junior F.A. classes respectively

The training college at Rajahmundry was originally established as an elementary normal school by the Gódvári District Board in 1883. Its status was raised in 1890 to that of a second-grade normal school. In 1892 it was taken over by Government and in February 1894 it was raised to collegiate rank with the Union high school, transferred to Government by the managing committee, as its practising school. In May 1904 it was affiliated to the University of Madras for the degree of Licentiate in Teaching. Its aim is twofold: to supply the educational institutions of the Northern Circars and Ceded Districts (Cuddapah excepted) with trained Telugu teachers, the want of whom has long been a bar to education in those districts, and to work (as a practising school) a large and efficient high school at Rajahmundry with classes as large as the needs of the town and the neighbourhood require.

The college is maintained from Provincial funds and the general management is in the hands of the Principal of the Rajahmundry college. The teaching staff consists of a Vice-Principal—a member of the Provincial Educational Service—eleven Licentiates in Teaching, two matriculates, a drawing-master, an agricultural instructor (who holds a diploma in agriculture), two pandits and a gymnastic instructor.

When transferring the Union high school to Government with all its properties, the managing committee also handed over a site, measuring two and a third acres, purchased by them in the heart of the town. On this, the Government began in 1897 to construct a building at a cost of about Rs. 65,000, and, on its completion in 1899, it was occupied by the training college classes, which had been before located partly in the arts college and partly in a rented building. With a view to providing a recreation ground for the boys of the practising school and the students of the training college, and to secure healthy surroundings for the latter, the authorities negotiated with the Rajahmundry municipality for the acquisition of the whole of the Potter's tank, situated in front of the college, and in 1895 submitted proposals for its acquisition. The scheme however fell through then owing to its prohibitive cost. In 1901 the subject was re-opened, and in the following year a portion of the Potter's tank and the house-sites in front of the college were acquired, and this area was reclaimed and enclosed within a compound wall at

a cost of about Rs 18,500. In 1902 proposals estimated to cost Rs 12,000 were submitted for the extension of the building at its northern end and the carrying out of certain alterations in the existing structure. These were sanctioned, and the work is now proceeding. No hostel is attached to this college. The fees in the practising section range from Rs. 19-6 to Rs 7-6 a term, and the rates of stipends to students under training from Rs 5 to Rs. 15.

The arts college possesses certain endowments for the benefit of Muhammadan students, and when it contains no boys of that faith who are eligible for these, they are given to Muhammadan pupils in the practising section. They consist of two 'Yeomiah scholarships' each of the annual value of Rs 46, constituted from the funds of an ancient yeomiah which lapsed to Government. The interest on Rs 7,200, being the amount of a boarding-house fund collected by the late Saiyid Ali Sâhib Bahâdur, a retired Deputy Collector, supplemented by a grant from Government, is also devoted to forming Muhammadan scholarships open to poor Muhammadan pupils, and ranging in value from Rs 3 to Rs 7 per mensem according to the class in which the pupil is reading.

The Pithâpuram Râja's college at Cocanada was founded T  
P  
C  
in 1852, as a general English and vernacular school, through the exertions of the then Collector, Mr Prendergast, and his sheristadar, M.R.Ry Tulasinga Chettyâr. It depended entirely on private subscriptions, gradually declined, and ultimately collapsed for a time in 1862. In the following year, however, through the efforts of the Collector, Mr Purvis, whose bust is now placed in a prominent position in the northern block of buildings in memory of his interest in the institution, the school was resuscitated and was formally re-opened on the 28th October 1863. Government made a monthly contribution of Rs 70 towards its expenses, and the late Râja of Pithâpuram, who had been one of its earliest pupils, added a further sum of Rs 100 a month.

It was located in a rented building till 1865, when the increasing attendance rendered it necessary to provide better quarters for it. The late Râja of Pithâpuram again showed his interest in the promotion of education by presenting the institution with a munificent endowment of Rs 28,000, the extensive and valuable site which it now owns, and a sum of Rs. 3,700 for the building and its furniture. Further contributions were collected and a building grant of Rs 5,000 was obtained from Government, and with these and the Râja's donation the northern block of buildings was constructed.

This was soon found insufficient, and shortly afterwards the western block was erected and was called the 'Linton Memorial School' in memory of the late Mr Linton, an Assistant Collector who had evinced great interest in the welfare of the institution. This block cost Rs 7,000, of which one half was contributed by Government and the other by the public.

The necessity of additional buildings was felt again in 1882, and a two-storied house was erected at a cost of Rs. 12,000, of which a moiety was contributed by the late M R Ry Pydah Rámakrishnayya, another of the earliest students of the school, and a moiety by Government. The building was opened by the then Governor, Sir Mountstuart Grant Duff, on March 3rd, 1883.

In 1897 a hall was constructed from college funds, at a cost of Rs 6,000, and in 1902 a hostel was completed at a cost of Rs 7,550, of which Rs 2,500 was given by Government. The latter is divided into two blocks (containing six rooms each) which are called respectively the Brodie and Sweet Homes, after Messrs V A Brodie and H Sweet, a Collector and a Superintendent of Police of the district who took much interest in the improvement of the college.

The school taught up to the 'middle school standard' (corresponding to the present lower secondary course) till 1866, when it was raised to the matriculation standard. In January 1884 the school committee opened an F A class, and the institution was duly affiliated to the Madras University and styled the 'Pithápur Rája's College' in honour of its liberal patron. In order to place the institution on a satisfactory financial basis, the committee registered itself on the 29th August 1892 under the Indian Companies Act under the name of 'The Pithápur Rája's College, Limited'.

The institution is managed by a council of which the Collector of the district, the Chairman of the municipal council, a representative of the Rája of Pithápuram, the Inspector of Schools and the Principal of the college are *ex-officio* members. A separate committee of seven disposes of all matters not expressly reserved for the decision of the council.

The college is supported mainly by school fees, which in 1903-04 amounted to nearly Rs 15,000. Other important items of income are the interest (Rs 1,400) on certain Government *pro-notes* and a mortgage loan of Rs 400, and a monthly grant from Government of Rs 90. The college is generally self-supporting, but is sometimes worked at a small loss. The deficit in 1903-04, for example, was Rs 370.

The establishment consists of a Principal and sixteen assistant masters, two Sanskrit, and two Telugu, pandits, two gymnastic instructors, and copy, drawing and music masters. The attendance, according to recent figures, amounts to 487, of whom 39 are reading in the senior, and twelve in the junior, F A class. The fees paid vary, according to the class in which the boy is reading, from Rs 60 per annum for the F A classes to Rs 14 for the first class. The boys come mostly from the adjacent taluks of Cocanada, Rámachandrapuram, Peddápuram and Pithápuram. The hostel buildings completed in 1902 will accommodate 24 boys, who pay twelve annas each per mensem for the use of them. They have not yet boarded there, but a kitchen has recently been built at a cost of Rs 1,000 to enable them to do so.

Liberal scholarships are given in the college. They amount in all to Rs 492 a year and vary from Rs 40 to Rs 5 per annum according to the class to which they are open. They are tenable for terms varying from two to four years, and are awarded by competitive examinations. They are only open to boys who are too poor to prosecute their studies without pecuniary help, and entrance to the examinations is also subject to certain age limits.

## CHAPTER XI

### LAND REVENUE ADMINISTRATION

**EARLY HISTORY**—The zamindars—Their administration—The *haveli* land—Committee of Circuit 1785-87—Settlement with the zamindars in 1789—Abolition of the Chiefs and Councils, 1794—Collectors of the *haveli* land **THE PERMANENT SETTLEMENT** 1802-03—Its failure—Its effect on the ryots—Special Commissioner appointed, 1843 **RYOTWARI SETTLEMENTS**—Before 1865—Settlement of 1865-66—Its scope—Grouping of villages—Classification of soils—Standard crops grain outturns, commutation prices—Cultivation expenses and money rates—Financial results—Water rate in the delta—The existing settlement its scope—Reclassification of delta soils—Water rate problems—Settlement of wild tracts—Financial results—Bhadrachalam taluk—Proprietary rights—Fixing of the peshkash—Settlement of 1890 in Bhadrachalam—Agency tracts and rented villages. **DISTRICT AND DIVISIONAL LIMITS** **VILLAGE ESTABLISHMENTS**—Re organized in 1866—Revised in 1885 **INAMS**

AS has already been mentioned on p. 34 above, the district, when it was at length definitely acquired in 1768, was not at once administered directly by the Company but was leased out to native renters called zamindars, over whom was a head renter named Hussain Ali Khán. The latter's lease expired in 1769 and the newly-acquired territory was then placed under the direct administration of the servants of the Company. The agents of the old factories and their subordinates were converted into Provincial Chiefs and Councils, and the Rajahmundry and Ellore Circars were put under the Chief and Council of Masulpatam, who for the next 25 years controlled the entire political, civil and revenue administration. They found that the land of the district was of two classes, namely, the *haveli* ('havelly') land, which consisted of household estates, situated round the chief towns, which had been appropriated by the Musalmans to the upkeep of their numerous garrisons and establishments and administered directly by them, and the zamindari land, the collection of the revenue in which was leased out on a commission to zamindars.

These zamindars, in theory, were merely agents of the Musalmans,<sup>1</sup> created for the sole purpose of collecting the

<sup>1</sup> See Higginbotham's reprint (Madras 1883) of the *Fifth Report on the affairs of the East India Company* (1812) and Mr Grant's *Political Survey of the Northern Circars* appended thereto, both of which have been freely utilized in the following pages.

revenue Theoretically, they were removable at pleasure, but they were generally permitted to remain for generation after generation in possession of their estates. They were often charged with the raising of local troops, who were consequently devoted to them, and during the lax administration of the later years of Musalman rule they had become so powerful that they had usurped hereditary rights and come to regard themselves as the legal owners of the soil. They maintained the semblance of state, residing in mud forts in which their palaces were situated, moving abroad only on elephants or in gorgeous palanquins, and being accompanied on their excursions by a rabble of armed peons and a posse of relatives and followers mounted on horses or borne in palanquins. Their practice was to exact by force or fraud all the revenue they could, to pay a certain fixed sum to the Government, and to appropriate the balance themselves. The Chief and Council of Masulipatam treated these zamindars as the owners of their estates, subject to the payment of a money peshkash to Government which was settled from time to time on what was called the *māmul jamabandī* i.e. a customary sum assessed on no scientific basis. The *havilī* land was kept under direct management as in the time of the Musalmans.

The zamindars undoubtedly oppressed their ryots. The 'ancient established custom' of collecting the revenue in the zamindari land was by a division of the crop (*dsard*), but in practice several different modes were adopted by the zamindars.<sup>1</sup> In some cases the crop was shared, in others, particularly on the more fertile soils producing paddy, there was a fixed rent, and garden land, or land producing tobacco, cotton, betel, sugar-cane, oilseeds, palmyra or fruit trees, was assessed on special principles. Where the paddy crop was divided between the zamindar and the ryot, the division was theoretically supposed to leave the cultivator 40, 50 or 60 per cent. of the crop, the higher rates being allowed to Brahmans and other favoured classes. But as a matter of fact the cultivator's share rarely exceeded 20 or 25 per cent. The fixed rents were also maintained at an oppressively high level.

The *havilī* land appears to have been managed on a somewhat similar system, a renter being substituted for a zamindar. Division of the crop was more common, but arbitrary assessments called *sist* and *malavats* were in some places substituted in its stead. Here again however it was the

<sup>1</sup> See the reports of 1786 and 1787 of the Committee of Circuit referred to below.

I practice rather than the theory which was of essential importance to the ryot. In the division of crops the proportions theoretically allowed to the cultivator were the same as in the case of paddy in zamindari land, but 'many after collections were made, and the renter usually exacted a higher price for his proportion than that of the market, which reduces the ryot's share to a fourth or even a fifth part of the produce.' The cultivators, in fact, were as much under the thumb of the renters as of the zamindars. They had no right in the soil, and the renter let the land to the highest bidder. Bad as was the condition of the zamindari ryots, their fields were better cultivated than the *havili* farms immediately dependent on the Company.<sup>1</sup>

The Chief and Council at Masulipatam did little or nothing to check this maladministration and oppression, and in 1775 the Court of Directors, aware of the evils of the existing system, and anxious both to protect the ryots and to secure a more adequate revenue from the zamindars, ordered that a Committee of Circuit, to be composed of five Members of the Council of Fort St. George, should be appointed 'to inquire into the state of the Northern Circars by ascertaining with all possible exactness the produce of the country, the number of inhabitants, the gross amount of the revenues, the articles from which they arose, the mode by which they were collected and the charges of collection.' The Directors further ordered that enquiries should be made into the military strength and financial position of the zamindars, and intimated that, while not desirous of depriving these latter of their revenue, they were determined to protect the ryots from violence and oppression.

Hardly, however, had this Committee begun its labours than its work was interrupted by the intervention of the new Governor of Madras, Sir Thomas Rumbold, who in 1778 decided to summon the zamindars to Madras and himself make a settlement with them there. The arrangement made accordingly was for five years at a rate  $12\frac{1}{2}$  per cent above the '*mámul jamabandi*,' i.e., the amounts the zamindars had hitherto been paying.

Sir Thomas Rumbold ceased to be Governor in 1780 and in 1783 the Committee of Circuit was reappointed. It conducted a lengthy enquiry into the resources of the district and the other points referred to in its instructions, and its reports on the *havili* and zamindari lands dated respectively December 18, 1786 and February 15, 1787 contain a full and valuable

<sup>1</sup> Circuit Committee's Report, dated February 15, 1787, para. 43.

description of the country. The immediate effect of its enquiry was that the increment of  $12\frac{1}{2}$  per cent. imposed by Sir Thomas Rumbold on the zamindars was confirmed, and in 1786 his settlement was extended for a period of three years till 1789, so that it was actually in force for eleven years.

In 1789 the Chief and Council reported that a just assessment on the zamindars would be two-thirds of their gross revenue. The Board of Revenue (which had been established in 1786) and the Government agreed, and a settlement was made on these terms except in the case of the zamindari of Pithápuram, the lease of which had not expired and which was then being administered by renters.

In 1791, however, famine devastated the country,<sup>1</sup> the zamindars fell into arrears, large remissions were granted them, and their settlements were extended from three to five years wherever the shorter of these terms had been fixed.

The Chief and Council at Masulipatam had distinguished themselves during this trying time neither by their knowledge of the conditions of their charge, nor by their loyalty to superior authority, the reports of the Committee of Circuit had also proved the inefficiency of their administration, and in 1794 they and the other Chiefs and Councils in the Northern Circars were abolished and the country was divided into Collectorates. At first, three Collectorates were formed with head-quarters at Cocanada, Rajahmundry and Mogalturru, now in Kistna, but shortly afterwards the greater part of the present district was placed under one Collector at Rajahmundry and was named the Rajahmundry district.

Collectors had already been appointed in 1787 for the management of the *havili* land. Till 1792 they were independent of the Chiefs in Council, but from that year till 1794 were subordinated to them. They introduced much-needed improvements, reducing the size of the areas leased to renters, and in some cases dealing directly with the ryots by sharing the actual crop with them in fixed proportions without the intervention of middlemen. The latter practice, though a great improvement on the system it succeeded, had many drawbacks as it involved, among other things, the maintenance of a large establishment of native officers who generally combined with the inhabitants to defraud the State.

From 1794, land which fell under the immediate management of Government was leased out in appropriate farms on joint rents to the leading ryots, the rents being fixed

<sup>1</sup> See Chapter VIII, p. 137

in grain and commuted into money at the market price or the average price for a number of years. This plan, however, still left much to be desired, since no precautions were taken to prevent the head ryots from oppressing their poorer neighbours—the besetting evil of all joint rent systems. Moreover the famine of 1791 had denuded the country of cultivators, and though much land had thus gone out of cultivation the ryots had to pay for it just as if it had yielded a crop.

Meanwhile the Court of Directors and the Government of India had been pressing the Madras Government to introduce permanent settlement which had been adopted in Bengal in 1793 and which was supposed to provide a solution of the vexed questions of the amounts which the zamindars should receive from their ryots and should pay to Government. The system was introduced in the Rajahmundry district in 1802-03. The estates of the existing zamindars were confirmed to them in perpetuity on a peshkash which was generally fixed at two-thirds of the average gross collections of land revenue in preceding years, the period of calculation varying from eight to thirteen years according as accounts were available. The *havli* land was divided into proprietary estates (or 'muttas') of convenient size yielding from Rs 3,500 to Rs 17,500, and these were sold in public auction to the highest bidders on permanent tenure subject to the payment of a peshkash calculated on the best available data. In both cases the rights of the under-tenants were protected by a legislative enactment (Regulation XXX of 1802) which enforced the grant of pattas and the observance of customary rights. The land customs, salt, abkárí and other miscellaneous sources of revenue, which had been included in former assessments, were resumed by Government and excluded from the assets of the new estates.

Twenty-seven muttas and thirteen ancient zamindaris were thus formed. Two other small zamindaris<sup>1</sup> were subsequently added to this number. The hilly and thinly populated estates of Rampa, Tótapalli, and Jaddangi, whose owners were called mansabdars and whose revenues were trifling, were not brought under the permanent settlement like the other parts of the district, and their existence was in fact almost ignored.

The greater part of the district was included in the Peddápúram estate, which was assessed with a peshkash of nearly seven lakhs. Large areas were also included in the

<sup>1</sup> Villase, and Jampalli and Bantumulli.

Pithápuram, Pólavaram and Kóta Rámachandrapuram zamindars, which were assessed respectively at two and a half lakhs, one lakh, and one and a quarter lakhs. The other properties were inconsiderable in extent. There were in all fourteen ancient zamindaris and twelve muttas in those parts of the present Gódávari district which were then included in the district of Rajahmundry.<sup>1</sup>

The Pithápuram zamindari is the only large property which retains anything like its old proportions. Much of the Peddápúram estate has been bought in by Government for arrears, and what remains of it has been divided into nine small zamindaris which altogether pay a peshkash of less than one and a half lakhs. The whole of the Kóta Rámachandrapuram estate was bought in by Government in 1846, and Pólavaram has been reduced by sales for arrears to a petty estate paying a peshkash of less than Rs 7,000. The other properties have suffered similarly from sales and subdivisions. Excluding the agency hill muttas and Bhadráchalam, eighteen zamindaris and eleven muttas are still in existence.

This permanent settlement was a dismal failure. Both the ancient zamindaris and the newly-created proprietary estates were speedily involved in financial difficulties. In the case of the former this appears to have been less the effect of over-assessment than of extravagance and mismanagement. Indeed the most lightly-assessed of them all was the first to collapse. The newly-created proprietors not only imitated the extravagance of the ancient zamindars, but had also to struggle against over-assessment. Their estates quickly began to be put up to sale in satisfaction of arrears of peshkash, and usually passed at first into the hands of speculators who eventually came to the same end. In 1813-14 the first of them was purchased on behalf of Government at auction by the Collector, and thenceforward, as the figures in the margin

* Year	No of Government villages	show,* an ever-increasing area came, by the same process, under the direct administration of Govern- ment. Though the proprie- tary estates were the first to fall, several of the an- cient zamindaris eventually shared their fate
1813	10	
1817	59	
1820	133	
1832	150	
1840	361	
1844	580	
1851	876	

<sup>1</sup> These figures exclude Bhadráchalam and parts of Yellavaram, which were not added to the district till later. The figures of peshkash include areas which have since been handed over to Kistna, and are only roughly correct.

The political results of the permanent settlement were equally disastrous. In 1822, Sir Thomas Munro, then Governor of Madras, examined in a characteristic minute the causes of the frequent disturbances of the peace which occurred, and attributed much of the disorder to the attempts of Government to enforce the rights of traders and other speculators who had lent money to the zamindars and proprietors on the security of their estates. He wrote —

'They are not dishonoured, they think, by their possessions falling into the hands of Government, but they consider themselves disgraced by seeing the abodes of their ancestors become the property of a low trader. As the Regulations now stand, we must, whenever a sowcar obtains a decree against a zamindar for a part or the whole of the zamindari, support him by force both in getting and maintaining possession of it, and hence we are every day liable to be dragged into a petty warfare among unhealthy hells, where an enemy is hardly ever seen, where numbers of valuable lives are lost from the climate, and where we often lose but never gain reputation.'<sup>1</sup>

He was emphatically of opinion, none the less, that the great hope for the future lay in the gradual extension of the area of the Government land. 'No zamindari once forfeited for rebellion should ever be restored. All estates falling in should invariably be kept and annexed to the Circar lands.'

Nor did the permanent settlement bring peace and plenty to the cultivators. Few of the zamindars interested themselves personally in the management of their estates, they entrusted everything to the care of managers, whose policy it was to render their masters entirely dependent on them and to prevent their interfering in the administration. There was no system of management, the only object was to extort from the ryots the utmost possible amount of revenue. A second middleman was often introduced by renting villages annually or for a term of years, preference being given to such proposals as ensured the highest amount of rent and afforded security for its punctual payment, and little regard being had to the class of persons tendering or the influence rack-rents must have on the resources of the villages. In adverse seasons all that could be taken of the ryots' produce was claimed on the part of the zamindar, and in ordinary years the demand purposely exceeded their means. The deficiencies of bad years were made up in good ones, and in both the ryot was left only a bare subsistence.

The inherent evils of this system were soon exaggerated by a succession of natural calamities which is described in more

<sup>1</sup> Arbuthnot's *Munro* (London 1881), i, 213

detail in Chapter VIII. An unfavourable season in 1831-32 culminating in a destructive hurricane in May of the latter year, was followed by the disastrous famine of 1833, the three years 1835-38 were far from prosperous, the scarcity in the last of them almost amounting to famine, in 1839 a cyclone did great damage all along the coast and far inland, while the season of 1840-41 was almost equally calamitous. Moreover a great decline in the weaving trade had taken place owing to the abolition of the Government factories. The value of piece-goods exported decreased from 14 lakhs in 1825 to less than 2 lakhs in 1842. Numbers of people were thus thrown out of work.

The impoverishment of the district and the decline in its revenue at length, in 1843, led Government to send Sir Henry Montgomery, Bart., an able member of the Civil Service, to make enquiries. His report, dated March 18, 1844, dealt fully with the evils of the existing system. He attributed them chiefly to the inefficient management of the zamindars and proprietors, and the consequent rack-renting and impoverishment of the villages. He also lamented the want of adequate means of irrigation—especially the neglect of the Gódavari water—and the disrepair of the existing works, and his report led to the enquiries which ultimately resulted in the construction of the great anicut at Dowlaishweram and the transformation of the delta of the Gódavari consequent thereon.

The most important part of his report, however, was that devoted to a consideration of the revenue policy which should be adopted in the constantly increasing area which, as has been seen, was coming under the direct administration of Government.

The first villages which came (in 1813-14) into Government hands were rented out to the principal inhabitants jointly, on the system approved by the Board of Revenue in 1794. In 1817 that plan was relinquished, and for a number of years the Government land was administered under the *asará* system of sharing the crops or the *visabadi* system of annual or periodical rents. In both cases the settlement was made with the ryots directly and without the intervention of a middleman, and the Collector was only authorized to rent the villages in the event of the inhabitants refusing to come to reasonable terms.

The *asará* or sharing system was simply the conversion into money of the Government share, ascertained by estimate or by actual measurement of the grain, of the actual crop

harvested each year. It was apparently almost universal on wet land. Its drawbacks, as already mentioned, were that it involved the entertainment of a large native staff who cheated the Government and bullied the ryots.

Under the *ulsabadi* system, which was generally applied to dry land, the assessment on the village as a whole was fixed annually by the Collector with reference to the probable prospects of the harvest, but was frequently revised at the *jamabandi* in accordance with the actual state of the season. This lump assessment was distributed among the different fields by the ryots themselves, individual agreements being taken by the Collector from each ryot for the rent apportioned to his holding.

The fairness of this distribution was in theory maintained by the introduction of the peculiar system of 'challenging,' under which any ryot who considered that his own holding was over-assessed and that of his neighbour too leniently rated could demand that the latter should be made over to him at an increased rate which he named. If the ryot in possession consented to pay the enhanced demand he could retain the land, and in that case a proportionate reduction was made in the assessment of the fields held by the ryot who challenged. If, however, the ryot in possession refused to agree to the increased rate, he was compelled to give up the land to the challenger, who took it on the higher terms he had himself named.

This challenging necessarily rendered occupation insecure, and it moreover failed to meet every case of unfairness, since the unit of challenging was the entire holding and not a particular field, and a small ryot whose one or two fields were over-assessed could not afford to challenge a wealthy cultivator with a large holding, however sure he might be that the latter was too leniently rated. 'Accordingly,' wrote the Collector in 1825, 'the substantial ryots invariably contrived that their own lands should be lightly assessed and the burden thrown on those of the poorer ryots.'

This apportionment of the lump village assessment among the different holdings was made either annually or periodically. If the latter, it was generally accompanied by a redistribution of the fields among the various villagers every three, four or five years (according to the custom of each village), somewhat in the same way as under the *karaiyidu* form of the *mirási* tenure in Tanjore, of which relics even now survive. This was done chiefly to prevent the land held by the smaller ryots from being exhausted by continual poor farming, but

also to counteract the frequent changes of possession rendered possible by the challenging system.

The *visabadi* leases did not work satisfactorily. Arrears usually accumulated owing to the inability of the poorer classes to pay their rents, and then alterations were made in the total amount of the lump assessment, but apparently nothing was done to render its incidence more fair.

Both the *asard* and the *visabadi* systems therefore had their drawbacks, and more than one Collector proposed a return to the renting methods. This was indeed authorized in 1839, though it was not actually carried out.

Sir Henry Montgomery's report of 1844 already referred to recorded the opinion that the only satisfactory way of dealing with the Government land was by a survey and scientific settlement. Meanwhile, as a temporary measure, he advocated a system of joint village rents, and this was introduced a year or two later and remained in force for some 20 years. The challenging system, curiously enough, was retained, and the main modifications introduced were the abolition of the *dsara* system and the insistence of the joint responsibility of the village community as a whole for the default of any of its members. Sir Henry Montgomery's view was that these joint village rents would afford protection to the poorer ryots in so far as their interests were mixed up with those of the richer, and he was also anxious to remove the obnoxious interference of Government servants which was an essential part of the *asard* system, and had also grown up round the *visabadi* system owing to the ryots being unable themselves to arrange the apportionment of the lump assessments among the different holdings.

Meanwhile notable changes had been effected in the administration of the district. In 1849 a Special Commissioner with the powers of a Board of Revenue was appointed to the charge of it, and the post was continued until 1855. In 1859 the Rajahmundry, Masulipatam and Guntur Collectorate were formed into the two districts of Gódvári (with Cocanada as head-quarters) and Kistna, the boundary between which followed the course of the Upputéri and Tamaléri rivers. The anicut across the Gódvári had also been completed in 1853.

Proposals for the first scientific settlement of the taluks comprising the new Gódvári district were submitted by Mr R E Master, Deputy Director of Revenue Settlement, in two schemes, one in 1860 dealing with the western delta, and the other in 1861 relating to the rest of the district.<sup>1</sup> The two

<sup>1</sup> Printed in No. XXII of the *Selections from the Madras Records*.

schemes with certain modifications, were introduced in 1862-63 and 1866-67 respectively

It was not considered desirable to survey or settle the whole of the villages belonging to Government. The scheme did not deal with 148 Government villages in the Agency and elsewhere in which patches of land were only cleared for temporary cultivation and abandoned after a year or two for fresh ones. These were left to be settled from year to year. Waste land, even in surveyed villages, was often left unclassified on the ground that it was not likely to be soon occupied, and many of the *lankas* in the Gódavari were omitted from the scheme, because their limits were continually fluctuating, and were ordered to be leased out annually by auction—a system which still obtains.

The remaining area was divided into the 'upland' and the 'delta,' according as it lay outside or within the influence of the Gódavari irrigation. In each of these tracts the villages were grouped into classes with reference to their general fertility and the quality of their irrigation sources. All the delta land was classed as dry, a uniform water-rate of Rs 3 per acre being imposed on irrigated fields in addition to the dry assessment.

The soils were grouped into fourteen classes,<sup>1</sup> the arenaceous series amounting to four per cent of the whole, the alluvial to six, the red ferruginous varieties to 29 and the regar to 59 per cent. There was also an exceptional class, making up two per cent. of the whole, in which were placed the *lankas* in the Gódavari and the land irrigated by the Yeléru river in Peddápura taluk.

The grain values of each of the 'sorts' into which these classes were subdivided were ascertained by experiment.

The crops taken as the standard for each class were as under —

Lankas.	Upland wet	Delta land and upland dry			Exceptional land under the Yeléru
		Red	Black.	Sandy	
Tobacco	White paddy	Cholam Cambu Horse-gram	Cholam Cambu Ragi Black paddy	Cambu Ragi Black paddy	White paddy Sugar-cane

expenses per acre on each class of soil being taken as the average cost of cultivating an acre with each of the standard crops The result worked out in ordinary cases to between Rs 5-8-0 and Rs 2 per acre, but in the case of tobacco it came to Rs 35, and in that of sugar-cane to Rs 95, per acre Both the gross and the net value of each 'sort' of soil having thus been ascertained, rates of assessment per acre were framed The share of Government generally approximated to half the net produce The rates arrived at were modified in their application to actual fields according to the classification of the villages already referred to, the same soils paying less in villages which were classed low in the

scale of fertility In the end, the eighteen rates for dry land and fourteen for wet shown in the margin \* were arrived at The first three of the former applied only to the exceptional soils in the lankas, etc

The result of the settlement was an increase in the revenue demand amounting, on the whole, to four lakhs, or 23 per cent, over the figures of 1859-60, though there was a decrease in the dry upland villages In the area which at present makes up the district, the approximate increase in the delta land amounted to Rs. 99,000, or 12 per cent., and in the upland

wet land to Rs. 41,000, while in the upland dry land the decrease was Rs 14,000. The net increase in this tract was thus some Rs 1,26,000. The water-rate in the delta was raised almost immediately (1865) from Rs 3 to Rs 4 per acre, and eventually in 1894 to Rs 5, and this resulted in a further increase.

This separate water-rate on regularly irrigated wet land was quite exceptional, the method usual in other districts being to charge such land a consolidated wet assessment. It was introduced under the orders of the then Secretary of State, Sir Charles Wood. His idea appears to have been that, though Government was selling the water, it had no concern with the use made of it, and was only required to fix a 'fair commercial value' for it. But to some land the water was worth much more than to others (since fields which grew excellent dry crops did not always do well when irrigated), and in effect the greatest inequalities of assessment grew up among the delta fields. These considerations led the Government to reclassify the delta land when the present settlement was introduced.

The settlement continued in force for 30 years and in 1896 proposals for its revision were made. The chief factors calling for consideration<sup>1</sup> were the enormous increase in prices (they had more than doubled in most cases), and the great improvement in means of communication, which had occurred since the last settlement. The anomalies caused by the water-rate system in the delta also called loudly for removal. In the uplands no reclassification of soils was considered necessary, and the chief change was an all round enhancement of the existing rates by one-third, so that Government might share in the profits resulting from the great increase in prices.

In the delta, however, both wet and dry land soils were reclassified and a consolidated wet assessment was substituted for the existing dry assessment plus water-rate.

In reclassifying these soils three series (alluvial, regar and arenaceous) were adopted, the first containing two classes and each of the two latter three. Each class was subdivided into 'sorts'. The standard crops taken for wet and dry land were white and black paddy respectively. For the former the grain outturns which had been arrived at for the same classes of soils in Tanjore were adopted, they were rather

<sup>1</sup> See G.O. No. 623 Rev., dated 27th August 1894 and B.P. (Rev. Sett.), No. 16, dated 29th January 1895, p. 1.

<sup>2</sup> See the exhaustive report in B.P. (Rev. Sett.), No. 43, dated 12th March 1896.

less than those worked out at the first settlement. For black paddy the outturns adopted were also rather below those calculated at the earlier settlement. For vicissitudes of season and unprofitable areas allowances of 10 per cent were made in wet, and 20 per cent in dry, land. The delta crops never fail and the ryots there obtain very high prices for their crops in famine years, but their assessment was not enhanced on that account. The estimated cost of cultivation was raised, the maxima for wet and dry crops being Rs 14 and Rs 8 against Rs 5-8-0 and Rs 4 respectively under the old settlement. The commutation prices were taken at Rs 118 and Rs. 96 per garce for black and white paddy respectively. The average prices of the last twenty non-famine years were actually much higher than these figures, but fifteen per cent was deducted from the averages to allow for merchants' profits. Half the net annual money value of the outturn of each field as thus ascertained was taken as the Government share and rounded off to the nearest standard rate of assessment.

The result was the marginally-noted \* fourteen rates for dry, and twelve rates for wet, lands. The two highest dry rates were only applied to lanka or *padugai* (river bank) lands, which are of exceptional fertility. For purposes of dry assessment, the villages were divided into two groups with reference to their means of communication and their proximity to markets, while wet land was grouped in blocks (irrespective of village boundaries) into four 'classes' with reference to the quality of the irrigation and drainage. When the rates of assessment were applied to particular fields, they were modified according to the groups and classes in which the fields were included.

The general result of the settlement was that in the whole of the Gôdavari delta—including those portions since transferred to Kistna district—there was a gross increase in the assessment of Rs 2,35,000, or eight per cent.

The change from the system of water-rate to a consolidated wet assessment caused some difficulties. The first doubt which arose was as to what land should be assessed as wet and what as dry, since under the former system the ryot had been able to please himself as to whether he would grow dry crops or wet. It was eventually decided that all land which had been continuously under wet cultivation for the five years

1893-99 (but excepting 1895-96), or from which Government water could not be excluded, should be classed as wet. The next question was what water-rate should be imposed on the remaining delta fields when they were irrigated. In the case of this land the option of using or refusing the water was continued, and, in consideration of this concession, the water-rate was fixed at one rupee per acre more than the difference between the wet and dry assessment. No land was classed as permanent double-crop land. The charge for a second crop on wet land was fixed at half the wet assessment, and specific rules were made for the charges for irrigated dry crops and second wet crops on dry land.

The levy of water rate in zamindari and inam land occasioned some discussion. A ruling of the High Court had raised a doubt as to the right of Government to levy the rate on land of these two classes from which water could not be excluded, and this had to be removed by legislation (Act V of 1900), and the rate was eventually fixed at the old uniform figure of Rs. 5 per acre.

Besides reassessing the areas dealt with at the former settlement, the existing settlement assessed to revenue many villages which either did not then belong to Government or had been left out of account owing to their jungly nature. Some 41 proprietary villages had been resumed by Government<sup>1</sup> since the original settlement, and many jungle villages had so far advanced in civilization as to justify their assessment. The large areas of waste land in the surveyed villages of the upland taluks, which at the original settlement had been left unassessed on the ground that they were not likely to be brought under cultivation within a reasonable period, were now brought into line with the fields adjoining them.

On the whole, then, 320,000 acres which had been settled in 1866 and assessed at Rs. 11,38,000 were charged Rs. 18,36,000 in the new settlement of 1900, 19,000 acres which had come newly under cultivation between the two settlements, and had been provisionally assessed at Rs. 16,000, were now charged Rs. 23,000, and some 42,000 acres were assessed for the first time in 1900 at Rs. 34,000.

The existing taluk of Bhadráchalam beyond the Gháts became British territory in 1860, and till 1874 was administered as part of the Upper Gódavari district of the Central Provinces. It is made up of the old Bhadráchalam and Rékapalle taluks. In 1874 it was decided, in view of its racial and geographical affinities to the Gódavari district of

<sup>1</sup> Thirty-seven villages of the Tótapalli estate in 1881 and four of the Rampe estate in 1882.

this Presidency, to transfer the taluk to this latter. Its revenue history is therefore distinct from that of the rest of the district.

Bhadráchalam is a portion of a large zamindari estate which is said to have been in the possession of the present family since 1324, and the rest of which remained, at the time of the cession in 1860, a part of the Nizam's Dominions. The possession of the property by the present owners has on several occasions been seriously, though not permanently, interrupted by feuds with a rival family. Rékapalle, which was formerly a separate taluk but is now embodied in Bhadráchalam, was leased out in 1815 by the proprietors of the latter estate to renters who subsequently set at naught their authority and even rose in arms against them. These people were accordingly registered as inferior proprietors at the settlement which followed the cession in 1860. Another class of inferior proprietors were the 'Doras,' to whom the owners of the estate had been wont to rent out certain areas on short leases on a commission of from 20 to 40 per cent of the gross produce. Their position was also defined at the settlement.

Besides fixing the position of the superior and inferior proprietors, this settlement also determined the status of the ryots. Some of these possessed varying degrees of occupancy right in the soil,<sup>1</sup> but the rest were tenants-at-will. The occupancy rights conferred ranged from a conditional right (in the case of those who had held their land for twelve years) to an absolute right and in all cases the proprietors were prohibited from raising the ryots' rents during the currency of the settlement.

The assessment of the peshkash to be paid by the proprietors was calculated by regular settlement operations. The villages were grouped for purposes of assessment into *chuks* (subdivisions) with reference to their fertility and locality, and the land was surveyed and the soils classified field by field. The rental which each class of soil in each *chuk* might be assumed to be able to pay was then calculated with reference to the money rents actually paid during the last five years, and to the value of rents paid in kind. Of the assumed rental thus arrived at, one half was taken as the peshkash.

The Doras above referred to had to pay the superior proprietors the whole of the peshkash so fixed on each village, together with road and school cesses each amounting to two per cent on the peshkash, a *dák* cess of a half per cent, and

<sup>1</sup> These are clearly set out in the papers printed with G O No 122, Revenue dated 29th January 1885, pp 4 and 5.

a tribute of from 10 to 40 per cent called *malikhāna*. The amount and description of rent due from the cultivators to the proprietors was also prescribed, even in the case of the tenants-at-will upon whom no permanent arrangement was binding. Waste lands and forests were declared to belong to Government, after a liberal deduction of waste (from 100 to 200 per cent of the cultivated area and called the *dupati* land) had been set apart round each village for the extension of cultivation, firewood and grazing purposes. The *abkārī* revenue was also resumed, and the rani of Bhadrāchalam was granted a deduction of Rs 4,428 from her *peshkash* as compensation for the loss she suffered through the resumption of this and the forests. This settlement was thus altogether different in principle from those carried out in *zamindaris* in this Presidency.

Besides the occupied proprietary tracts, the country contained a vast extent of waste land and small area of occupied land the proprietary right in which was vested in Government. The latter consisted of a number of small and neglected villages in the heart of the forest, in which only shifting cultivation (*pōdu*) was practised. The ryots in these were given occupancy rights over all fields which they could prove to have been continuously held by them, and a small assessment—apparently four annas on the extent culturable with one axe, about three acres—was levied.

After Bhadrāchalam became part of the Gódāvārī district, the question of its re-settlement arose. The original settlement had been far less favourable to the proprietor than those carried out in this Presidency, and the proprietor pressed for a reduction of his *peshkash* and the restoration of his former rights to the revenue from *abkārī* and the forests. The general lines upon which the re-settlement should proceed were ultimately laid down in 1885, but it was not carried out till 1888-89 nor introduced till 1890. The inferior tenures were not interfered with—indeed ryots with provisional occupancy tenures were granted absolute occupancy rights. The average rates on Government wet and dry land were put at 8 annas and 4 annas respectively, and cultivation is now measured up annually. The *peshkash* was fixed at two-thirds of the various superior and inferior proprietors' assets, ascertained by a scrutiny of their accounts, subject to the proviso that no curtailment exceeding .15 per cent should be effected in any proprietor's income. The *abkārī* and forest revenue were again retained in the hands of Government, but as an act of grace an allowance of Rs 4,000 a year was made to the *zamindar* of Bhadrāchalam as compensation therefor, the deduction from

the rāni's peshkash above referred to having lapsed at her death. The cost of the village establishment was deducted from the assets on which the peshkash was calculated. The *malikhānas* were fixed at a uniform rate of 10 per cent on the peshkash. The road and other cesses were continued and formed into a fund called the Bhadrāchalam Road Fund, which was to be administered by the Collector.

The net result of this settlement was a loss to Government of just over Rs 1,000 annually.

The present Agency tracts of Gódavari consist of the whole of the old mansabs (estates) of Rampa and Jaddangi, the more hilly parts of the old Peddapuram and Pólavaram zamindaris, the Dutcharti and Guditeru muttas of the Golconda Agency transferred from Vizagapatam in 1881 and the Bhadrāchalam taluk transferred from the Central Provinces. As has already been seen, the mansabs were disregarded, as being unimportant, both at the permanent settlement in 1802-03, and at the settlement of 1861-66, and since that time they have all been resumed in circumstances described in the account of each in Chapter XV. The land which formerly belonged to the two zamindaris of Peddapuram and Pólavaram is held either by muttadars or direct from Government, and the revenue system in Bhadrāchalam has just been described.

The Government villages, generally speaking, have not been surveyed or settled, but are rented out from year to year to the highest suitable bidder, who is debarred by the terms of his annual patta from raising the rents of the ryots. The auction is merely a form, as there is seldom any competition. Some of these villages are being surveyed and it is proposed to introduce an experimental settlement direct with the ryots on the basis of existing rents. The muttadars pay a small quit-rent. They hold their land<sup>1</sup> on a service tenure of the same nature as that of the former mansabdar (*i.e.*, *kāvalgārī* or watch and ward) for any breach of which they are answerable to the Government. The holders of the muttas transferred from Vizagapatam are on somewhat similar ground, their tenure being conditioned for service and defeasible at the will of Government. Government can remove them and can appoint whom they choose as their successors. The Agency also includes a few mokhāsa villages granted by Government on favourable terms for services performed—generally during the Rampa rebellion.

<sup>1</sup> G.O. No 103, Revenue, dated 3rd February 1890.

It has already been mentioned that the area which now makes up the Gódávari district was originally placed under the Chief and Council at Masulipatam, was divided in 1794 into the Collectorates of Cocanada and Rajahmundry, was included in 1802 in the new Rajahmundry district, formed part of the Gódávari district first formed in 1859, and was increased by the addition of Bhadráchalam taluk in 1874 and two muttas of Golconda Agency in 1881

The district thus constituted increased enormously in wealth, population and importance when the irrigation from the Gódávari anicut took full effect, and became a heavier charge than one Collector could efficiently administer. Accordingly in 1904 the portion of it which lay south and west of the Gódávari river (with the single exception of the Pólavaram division) was transferred to the Kistna district, which latter in its turn was lightened by the formation of the new district of Guntur. The existing divisional charges are as under —

Division	Taluka.	Area in square miles	Population in thousands.
Rajahmundry (Sub-Collector)	Rajahmundry, Amalápuram, Nagaram	993	542
Bhadráchalam Agency (Head Assistant Collector)	Bhadráchalam	911	49
Pólavaram Agency (European Deputy Collector)	Pólavaram, Yellavaram, Chódavaram	2 229	111
Peddápuram (Deputy Collector)	Peddápuram, Ráma chandrapuram	800	387
Head-quarter (Cocanada) Deputy Collector	Cocanada, Pithapuram, Tuni	701	357
Total		5,634	1,446

It was not till 1866 that the village establishments of the district were thoroughly re-organized on modern lines. At that time the village servants were paid partly by certain customary fees and partly by the profits of the cultivation of *inam* lands granted them free of assessment. The customary fees had been collected with, and included in, the old joint-rent settlements, and then deducted under the head of ordinary remissions and disbursed to the village servants entitled to them. At the settlement of 1862-67 these fees were not included in the assessments fixed upon the land, and the Government expressly reserved the power to levy a regular cess for the proper remuneration of the village officers. It

was decided in 1866<sup>1</sup> that this cess should be levied under the recent Village Service Cess Act of 1864 at the rate of 8 pies in every rupee of the land revenue on Government lands and of water-rate on inams. It was ordered that the inam lands which had up to then formed part of the remuneration of the village servants should be enfranchised (i.e., surrendered to the then holders) at a quit-rent of five-eighths of the land revenue assessment which would have been charged upon them had they not been inams. The proceeds of the cess and the quit-rents on the inams were set aside to constitute a fund (since abolished) for the future payment of the village establishments.

Before these changes were introduced, the existing establishments were revised. The number of villages was greatly reduced by clubbing small ones with larger ones adjoining, and the establishments were greatly modified, being in every case much reduced. A munsif, a karnam, a talaiyári (called in this district a náyak) and one or more vettis (according to the amount of the revenue demand) were allowed to each village, an additional talaiyári was sanctioned for 29 large villages, and nirgantis (distributors of irrigation water) were largely increased in number, but were only employed for tanks in upland villages in which the ryots applied for them, and were not allowed in delta villages. The payment of munsifs and karnams varied, with the revenue demand of the village, from Rs 1½ to Rs 12, and from Rs 5 to Rs 20 a month, respectively. The lower rates for munsifs (Rs 1½, Rs 2, Rs 3 and Rs 4) were confined to villages where the revenue demand was small and the work of the headman consequently light. The pay of the talaiyáris, nirgantis and vettis was fixed at a uniform rate of Rs 4 a month. The old village shroffs were abolished.

Village barbers and Chamars (leather-workers) had also been formerly remunerated with land inams. These were not enfranchised, but were left to their holders to be enjoyed as service inams on condition that the holders rendered to the villagers the services, as barbers and leather-workers, which had been customarily required of them. Specific services were usually specially paid for in grain by the villagers, and these payments formed an addition to the income obtained from the inams.

In 1885 a new scheme of village establishments was sanctioned. The essential alterations effected by this were<sup>1</sup> the increase of the munsifs' pay and the appointment of monigars to help them, the appointment of assistant

<sup>1</sup> See G O No 1237, Revenue, dated 23rd May 1866, and also Nos. 963, dated 29th June 1870, and 1097, dated 26th July 1885.

karnams, a moderate increase in the number of the talayáris and nírgantís and a decrease in that of the vettis, and the payment of those village officers in whole inam villages and zamindaris who did work for Government. Villages were graded into six classes, and the pay of munsifs and karnams varied between Rs 5 and Rs 12 and Rs 8 and Rs 20 respectively. In some cases the munsifs were paid as much as Rs 15. The number of villages was altered by regrouping and by making provision for some resumed villages in the Rampa and Tótapalli mansabs, and the net result was that the total was reduced by ten. Subsequent to the reforms of 1885 the number of monigars was slightly reduced by regrouping,<sup>1</sup> and finally in 1898<sup>2</sup> the minimum pay of karnams was raised to Rs 8.

In Government villages in Bhadráchalám an establishment of headmen (patéls) karnams (patwáris) and talayáris is paid from a fund constituted from a deduction of one anna in the rupee on the land revenue collections in those villages.

The inams of the district were settled by the Inam Commissioner between 1860 and 1870. One peculiar class of inam then dealt with was the ferry inams, which had been granted to remunerate the boatmen who worked ferries on the Gódávari. The enfranchisement at a quit-rent of two-thirds of the assessment, of such of these as had been rendered unnecessary by other ferrying agency was ordered in 1865.<sup>3</sup> Ferry inams still exist, notably in zamindari villages. As has been said, the village service inams in Government villages were enfranchised at a quit-rent of five-eighths of the assessment, and the inams of the quasi-private servants of the villagers in such villages—the barbers and the chucklers—were not interfered with.<sup>4</sup>

Since 1902 a special officer has been engaged upon the enfranchisement of the village service inams proper in the proprietary estates. The principles followed differ in two important particulars from those adopted in the case of village service inams in ryotwari villages. The enfranchisement is at a quit-rent equal to the full assessment leviable on such lands, instead of at five-eighths of this amount, and the enfranchised lands are liable to re-assessment at the resettlement of the district. The work is practically completed and the revised village establishments nearly all introduced.

## CHAPTER XII

## SALT, ABKARI AND MISCELLANEOUS REVENUE

SALT—The systems of administration—Methods of manufacture—Markets—Salt for Yanam—Fish-curing yards—Contraband salt earth ABKARI AND OPIUM  
 —Arrack—Arrack in the Agency—Toddy—Toddy in the Agency—Foreign liquor—Opium and hemp-drugs—In the Agency CUSTOMS—Land customs  
 —Sea-customs. INCOME TAX STAMPS

THREE systems of administering the Government salt monopoly are in force in the Gódvári district, namely, the excise system, the monopoly system and the modified excise system

Under the first of these, which is in force in the factory at Jagannathapuram (Jagannaikpur) and the major part of that at Penuguduru (these are the only two factories in the district), the salt is manufactured by licensees who are allowed, subject to certain restrictions, to make any quantity they choose, and dispose of it how and when they like, after they have paid to Government the excise duty on it plus a small cess per maund to cover interest on the capital cost of permanent works connected with storage and manufacture which have been carried out by Government. This system was introduced into the district in 1885-86. It has two drawbacks, namely that the quantity manufactured by the licensees may be inadequate to the demand, and that by manipulating the market the licensees (or outside capitalists) may unduly raise the price of salt. The former of these disadvantages is met by the provision of penalties for neglect to manufacture, and the latter by the retention of a part of the Penuguduru factory under the old monopoly system, the second of the two systems above referred to.

Under this, the pans are worked by license-holders who are required to hand over all the salt they make to Government, and are paid for it a stated rate per garce called the *kudrúdam* (cultivator's share) which is calculated to cover all expenses of manufacture and leave the license-holder a reasonable profit.

Of late years the third of the above systems, the modified excise system, has been introduced in an extension of the Penugudúru factory. Under this, the Board of Revenue announce, before the manufacturing season begins, what quantity (if any) Government is prepared to buy, and the licensees are bound to make and deliver this quantity.

1. Having done so, they are allowed to manufacture on their own account in the same manner as under the excise system.

	Acres	Cents.	factories which is worked
Jagannáthapuram excise	127	8	under each of these three

Do, monopoly	77	8	thapuram factory is with-
Do, modified excise,	88	18	in Cocanada municipality

and that at Penuguduru is near that town. In both of them, the salt is made by the ordinary methods. The pans are supplied with brine from channels connecting with the sea or tidal creeks, and not from brinepits. At Jagannathapuram a steam pump is used for lifting the brine, and, at Penuguduru, picottahs. The soil at Penuguduru is nearly all of a clayey description, and is sandy in only a very few parts. The result is that the salt made there is dark in colour and rather dirty. That made at Jagannáthapuram is also darker than usual. In both places, however, the quality is good and the salt has the commercial advantage of being rather light, which, since salt is bought wholesale at the factories by weight and retailed in the bazaars by measure, renders it popular with the dealers. The Jagannáthapuram factory used to be worked entirely by the Oriental Salt Company, Limited, which endeavoured, by the use of certain patent processes, to purify the local product so as to enable it to compete in the Calcutta market with 'Liverpool' salt. The attempt failed and the company was voluntarily wound up at the end of 1904. The factory is now worked, under a lease running for 20 years from January 1889, by Messrs Hall, Wilson & Co., who have been recognized as receivers on behalf of the debenture-holders in the company.

The salt made in the two factories is largely consumed within the district itself. Out of 789,000 maunds of salt manufactured there in 1905-06, nearly half was consumed within it. The balance was sent to Vizagapatam, Kistna, the Central Provinces and Orissa. The exports by sea used formerly to include large quantities sent to Rangoon, but in recent years cheap salt, mostly from Germany, has reached that town and reduced prices to a stage which leaves no profit on this trade. When the stock of Bombay salt is short, salt is sometimes exported from Cocanada to Calcutta. In 1903-04 about 126,000 maunds were sent there, but this figure is quite exceptional, and the exports by sea rarely exceed 50,000 maunds in all.

The supply of salt to the French Settlement of Yanam is governed by the rules which apply to the other French

Settlements in this Presidency Under a treaty of 1815 between France and England, modified by two subsequent conventions entered into in 1818 and 1837 between the Governments of Madras and the French Possessions,<sup>1</sup> it was agreed that the French, in consideration of an annual payment, should undertake to manufacture no salt in their territories, that the Madras Government should supply them with such salt as they required 'for domestic use and consumption' at cost price, and that they should retail this 'at nearly the same price' as it fetches in adjoining British territory

In Gódvári, as elsewhere, fish-curing yards have been established in which salt is sold at a little over cost price for use in the curing of fish caught in the sea There are four of these, namely, at Coringa, Gudarugunta (near Cocanada), Uppáda (near Pithápuram) and Konappapéta, further north up the coast At least three-quarters of the fish cured are small The larger kinds chiefly include mango fish, sharks and skates The demand for salted fish is great and exceeds the supply, though the method of curing is primitive if not inadequate Prices, however, are kept down by the merchants who make the fishermen advances and so have them in their power

Salt-earth is at present declared to be contraband only in the Pithápuram and Tuní divisions, certain villages in the Tótapallí zamindari in Peddápúram taluk, the Cocanada and Nagaram taluks, and the Amalápúram taluk less the division under the deputy tahsildar of Kottapéta Elsewhere the saline soils are neither plentiful enough nor rich enough in salt to constitute a danger to the revenue The Salt Act is not in force in the Agency, but no saline earths exist there and the supply of salt is all obtained from the low country

No saltpetre is made in the district, either crude or refined

The abkári revenue consists of that derived from arrack, toddy, foreign liquor and hemp-drugs Statistics regarding each of these items, and also concerning opium, will be found in the separate Appendix

The arrack revenue is managed on what is known as the contract distillery supply system, under which the contract for the exclusive privilege of the manufacture and supply of country spirit in the district is disposed of by tender, an excise duty is levied on the spirit issued from the contractor's distillery or warehouse, and the right of retail sale in licensed shops is sold separately by auction every year Wholesale vend dépôts are opened by the contractor at places fixed by the Collector, and the number of retail shops is definitely limited The rates at which the spirit should be sold to the

<sup>1</sup> The first two of these papers are printed *in extenso* in Atchison's

retail vendors are fixed by Government and embodied in the terms of the contract. The contract is held at present by Messrs Parry & Co., Managers of the Deccan Sugar and Abkárí Co.'s distillery at Samalkot,<sup>1</sup> who make the spirit at that distillery from molasses.

The consumption of arrack in Gódavari, when compared with that in other districts in which the still-head duty is the same (Rs 4-6 per gallon of proof spirit), is moderate. In 1903-04 the average incidence of the arrack revenue per head of population in the district as formerly constituted was as 2-7 against as 3-11 in the then Kistna district, as 2-1 in Nellore, and 3 annas in the Presidency as a whole.

Up to 1900 the arrack consumed in the district was made from toddy and on the out-still system. The change to the spirit made from molasses in the distillery, which was dearer than the other and had a less popular flavour, caused a fall in the consumption and revenue (which however was more than counterbalanced by a rise in the revenue from toddy) and also offered a strong temptation to illicit distillation. The consumption of the molasses arrack, however, is now steadily increasing, and it would seem that the vigilance of the protective staff of the Salt and Abkárí department has resulted in the transition from the one system to the other being safely tided over.

In the Agency, the arrack revenue is differently administered. Three systems are in force, namely, the ordinary excise system, the nominal fee system, and the out-still and shop system.

The Abkárí Act I of 1886 has been extended to 47 villages in Yellavaram, Chódavaram and Pólavaram—chiefly the more civilized villages near the plains—and the excise system has been introduced into 30 of these—two in Yellavaram, four in Chódavaram and 24 in Pólavaram.

In the rest of the Agency only the old Abkárí Act (III of 1864) is in operation, and the abkárí administration is in the hands of the Revenue officials. Outside Chódavaram, the second of the two systems above mentioned is in force in the Kóya and Reddi villages, the inhabitants of which are allowed to make arrack for their own consumption on payment of a nominal fee of two annas a head per annum for every male over fourteen years of age. The rules require that the village headman should take out the license and make and supply arrack to the Kóya and Reddi residents, but in practice no actual license is granted. In Chódavaram little abkárí revenue is derived from the muttas, since a toddy tax (*chigurupannu*) is supposed to be included in the quit-rent levied from

<sup>1</sup> See Chapter VI, p. 111

the muttadars, but the out-still system is in force in some of the muttas

In all parts of the Agency in which neither of the aforementioned systems is in force, the arrack revenue is managed on the out-still system, whereby the right both to make and to sell arrack in licensed premises is sold annually by auction

In Bhadrachalam the arrack is distilled from the flowers of the *ippa* (*Bassia latifolia*) tree, but elsewhere in the Agency from toddy

In the plains, the toddy revenue is now managed on the usual tree-tax system, under which a tax is levied on every tree tapped and the right to open retail shops is sold every year to the highest bidder. The toddy is nearly all drawn from date and palmyra palms, the number of each of these which is tapped being about equal. Date toddy is used from October to the end of January and from July to September, when palmyra toddy is scarce. The toddy-drawers are generally of the Idiga and Gamalla castes.

A fair number of trees are tapped for sweet juice in the delta taluks, since the demand for jaggery at the Samalkot distillery and sugar factory is very large. Many more are tapped in the western delta lately transferred to the Kistna district. Licenses have to be taken out for tapping for sweet juice. The low price of jaggery formerly retarded the industry, but recently (probably owing to the effect of the countervailing duties on sugar) the price has risen from Rs 14 per candy of 500 lb to Rs 21 or Rs 22, and this may result in an extension of sweet-juice tapping. The tappers, however, are very usually in debt to capitalists from whom they have received advances, and are perhaps not likely to benefit much themselves.

In the Agency, the tree-tax system is in force in the 30 villages already mentioned where the excise system of arrack administration has been introduced but elsewhere no separate revenue is derived from toddy. Toddy is drawn by the hill people from date, palmyra and sago (*Caryota urens*) palm trees.

Six taverns have been opened in Rajahmundry and Cocanada for the sale of foreign liquor to be consumed on the premises. The right to sell in them is disposed of annually by auction. In the Agency, a few shops have been opened on payment of fixed fees.

The sale of opium, preparations of the hemp plant and poppy-heads is controlled under the system usual elsewhere. Supplies are obtained from the Government storehouses. There is an opium storehouse at Rajahmundry, the only one in the Presidency outside Madras. Licenses for wholesale

- I vend dépôts are issued by the Collector on payment of a fee  
 D of Rs 15 per annum, and retail shops are sold annually by auction. The retail price of opium is fixed by Government at  $2\frac{1}{4}$  tolas for a rupee.

The amount of opium consumed is very large. In the old Gódávári district the average consumption per head of the population in 1903-04 was 619 tola against 082 tola in the Presidency as a whole, and the incidence of the revenue was 2 as 2 ps per head against 4 ps for the whole Presidency. It has been suggested that smuggling to Burma (most difficult to prevent) is responsible for much of this abnormal consumption. Parcels of opium sent by post from this district were seized in Rangoon in 1902-03 and previous years, and the many emigrants who go to Rangoon from Cocanada are believed to smuggle the drug with them. The Rangoon authorities have been particularly on the alert recently. Another explanation is that opium is used in the district as a prophylactic against malaria, but against this is the fact that the drug is not consumed more largely in the malarious than in the healthy taluks.

The consumption of hemp-drugs per head of the population is smaller in Gódávári than usual. In 1903-04 the incidence of revenue in the old Gódávári district per head per annum was one pie against two pies in the Presidency as a whole.

In the Agency, the villages to which Act I of 1886 has been applied are supplied with ganja from two shops in Pólavaram which get their stock from the plains. Elsewhere there are no restrictions on the cultivation of ganja, but as a fact it is little grown or consumed. There are a few opium shops. They are supplied from Rajahmundry and are managed in the ordinary manner, but by the Revenue department instead of by the abkárí authorities.

- I Under native rule, and even in the early years of British administration, land-customs were levied at frequent stations along the main lines of communication, and had the most baneful effects upon trade. In their report of 1787, the Circuit Committee<sup>1</sup> wrote —

‘Numerous chowkis are placed on all the roads, where, besides the zamindars’ dues, many rissooms are exacted, which is the cause of much vexation and inconvenience to the trader. The enormous duties exacted on teak deserve particular notice. From Pólavaram to Yanam they amount to 200 per cent. That carried by the Narasapur branch pays 250 per cent at nine places. Hence teak timber is frequently brought from Pegu at a cheaper rate than can be afforded by the merchants who trade in this article to Rékapalle.’

<sup>1</sup> See Chapter XI, p. 16a.

The only land-customs now collected are those on goods passing into the district from the French Settlement of Yanam. These are levied at two stations (chowkis) established at Nilapalli and Injaram, on the east and west frontiers of the Yanam Settlement. The tariff of rates in force is the same as that for sea-borne imports from foreign countries. The only articles which are ever charged an export duty in this Presidency are paddy and rice, and by an arrangement entered into many years ago the export of these to Yanam, in quantities sufficient for the consumption of its inhabitants, is permitted free of duty.

There is only one considerable port in the district, that of Cocanada, and there a regular sea-customs establishment is maintained. Coringa is also open to foreign trade but the business done is very small. The sea-customs work is supervised by the ordinary establishment of the Salt, Abkári and Customs department. The small sub-ports of Uppada and Bendamúrlanka are open only to coasting trade.

The Income-tax Act does not apply to the Agency tracts. Figures for the rest of the district will be found in the separate Appendix to this volume. The incidence of the tax per head of the population in the present district in the triennium ending 1904-05 was as high as one anna six pies, against  $10\frac{1}{2}$  pies in the mufassal districts as a whole. Madura and the exceptional case of the Nilgiris were the only areas in which the figure was higher. Of the various taluks, the incidence was highest in Tuni, Cocanada and Rajahmundry, and lowest in Pithápuram and Rámachandrapuram. The great wealth of the delta taluks comes from agricultural pursuits, the income from which is not liable to tax, and the incidence in several of these is low.

The revenue from stamps is very large in proportion to the population, the receipts per mille of the inhabitants from judicial stamps being higher in only two other districts and those from non-judicial stamps in only four others. Of the total stamp revenue, by far the largest amount is paid by the Cocanada and Rajahmundry taluks, owing no doubt to the existence of the Judge's and Sub-Judge's courts at their head-quarters. Considerable contributions are also made by Amalápuram and Peddápúram, and, to a less extent, by Rámachandrapuram. In the Agency, the revenue from stamps is exceedingly small, especially in Yellavaram and Chódavaram. The Collector (and, during his absence from head-quarters, the Treasury Deputy Collector) have been empowered to affix impressed labels to documents presented by the public.

## CHAPTER XIII

### ADMINISTRATION OF JUSTICE

---

EARLY METHODS—Under native rule—Under the Chiefs and Councils THE PRESENT SYSTEM—In the plains—In the Agency CIVIL JUSTICE—Existing Courts—Amount of litigation—Registration CRIMINAL JUSTICE—The various Courts—Crime—The Vandis or Nakkals—Other criminal classes POLICE—Former systems—The existing force JAILS

UNDER native rule, and also in the early days of British administration, the regular courts of justice were few. The Committee of Circuits,<sup>1</sup> in its report of December 1786, describes as follows the system which was in force —

‘During the Mogul Government there were courts of justice established at Rajahmundry and Ellore, where Kazis administered justice according to Muhammadan law. The Foujdars<sup>2</sup> reserved to themselves the infliction of capital punishments and the determination on causes of considerable property. There was also at each place a Cutwal (kotwal) with an establishment of peons to superintend the police, and a Nurkee whose duty it was to regulate the price of provisions.

‘Of these nothing but the names remain, and the inhabitants are without any Courts of Justice. Trifling disputes are settled by the Karnams and head inhabitants. Matters of greater consequence are referred to the Renter or the Chief and Council, but the distance at which some of the farms are from the seat of Government renders an appeal to the latter troublesome and expensive. For heinous crimes (which are seldom perpetrated) the only imprisonment at present inflicted by our Government is confinement of the culprit’s person.’

In the early days of British rule the only civil court having any jurisdiction within the district was that of the Chief and Council at Masulipatam, and the activities of this were confined almost exclusively to the limits of Masulipatam town and factory. ‘Of criminal jurisdiction there was none. There was no law providing for the infliction of death or any other penalty. The Chiefs in Council had very little authority in their districts, and of course every zamindar could interfere in the direct administration of justice.’ A brief but vivid picture of the lawlessness which naturally

<sup>1</sup> See Chapter XI p 162

<sup>2</sup> *I.e.*, The Foujdars, sometimes called also Nawabs, who were in charge of each of the five Northern Circars.

resulted from this state of things is afforded by a contemporary account of the condition in 1789 of the port of Coringa, then a busy place. There, owing to the number of ships and sailors that visited the port and the 'general want of police,' fighting, thefts and murder were common. 'When any wrong is done the injured party has no one of sufficient authority to apply to for redress. Every one here is judge of his own cause. The Honorable Company's Resident lives at Comprapollam (Sunkarpalaiyam near Injaram), eight miles off, and when applied to on such occasions urges want of due authority to remedy abuses and to take cognizance of offences.'<sup>1</sup>

The beginning of the last century witnessed a salutary change in the state of things. The supine Chiefs and Councils had been replaced in 1794 by Collectors, and in 1802 Lord Cornwallis' system of judicial administration was introduced into this Presidency and a Zilla Court was established at Rajahmundry. It was subordinate to a peripatetic Provincial Court at Masulipatam, the judges of which used to come on circuit from time to time and hold criminal sessions. In the same year (1802) native commissioners were appointed to hear petty civil suits. A few years later they received the designation of district munsifs, which, though their powers have been much increased they still bear. In 1827 Auxiliary Courts were established and native judges (later called Principal Sudder Amins) were appointed with extensive authority. In 1843 the Zilla and Provincial Courts were abolished and a Civil and a Subordinate Court were created in their stead at Rajahmundry. The latter was abolished in 1859, but in 1873, when the existing District Courts Act became law, the name of Subordinate Courts was given, as elsewhere, to the courts of the Principal Sudder Amins, and the chief court in the district was designated the District and Sessions Court. The Sub-Court at Rajahmundry was temporarily abolished in 1877.

In the Agency, both civil and criminal justice are differently administered. This tract consists of the deputy tahsildars' divisions of Polavaram, Yellavaram and Chóda-varam and the taluk of Bhadráchalam, all of which are remote tracts covered with hill and jungle, sparsely provided with communications, shunned by the dwellers in the plains, and inhabited by backward tribes who are most illiterate and ignorant of the ways of the world, and yet ready to go out on the warpath if once any of their many peculiar

<sup>1</sup> *Selections from the Records of the Madras Government (Madras 1855),*  
xix, 24.

susceptibilities are wounded. In country, and to people, such as these, much of the ordinary law of the land is unsuited, and a special system has consequently been introduced.

A precedent existed in the case of the Agencies of Vizagapatam and Ganjám. In consequence of the unceasing turbulence in them which led at length to the appointment, in 1832, of a Special Commissioner, with special powers, to restore order, these two tracts were excluded, by Act XXIV of 1839, from the operation of much of the ordinary law and were placed under the direct administration of the Collectors of those districts, who were endowed with special and extraordinary powers within them in their capacity as 'Agents to the Governor'

A similar method of administration was extended to the greater part of the present Gódavari Agency in 1879, advantage being taken of the Scheduled Districts Act (India Act XIV of 1874) to constitute an Agency in the then Bhadráchalām and Rékapalle taluks, which make up the present Bhadráchalām taluk, and 'the Rampa country,' which is practically the present Chódavaram division.

The Agency thus formed has been three times extended, namely, in 1881, when the muttas of Dutcharti and Guditeru (now in Yellavaram division) were transferred to it from the Vizagapatam Agency, in 1883,<sup>1</sup> when the villages of the resumed mansab of Jaddangī and large portions of the Pólavaram division were added, and in 1891,<sup>2</sup> when the Pólavaram and Yellavaram divisions attained substantially their present shape.

In the Agency thus constituted the Collector of the district, in his capacity as Government Agent, is both District Magistrate and District and Sessions Judge, the tahsildar and deputy tahsildars have minor civil jurisdiction within their respective charges, corresponding (with certain modifications) to that of district munsifs, and the Agency Deputy Collector of Polavaram and the Divisional Officer at Bhadráchalām, in their capacity as Assistant Agents, hear appeals from them and have powers similar to those of Subordinate Judges. The tahsildars and deputy tahsildars (and the taluk sarishtadar at Bhadráchalām) are second-class magistrates, and the Divisional Officers, as elsewhere, are first-class magistrates, but appeals from the decisions of the latter lie to the Collector as Agency Sessions Judge. The village munsifs have the ordinary criminal, but no civil, powers. The

<sup>1</sup> See notification in the *Gazette of India* for 1883, 1, 265.

<sup>2</sup> See notification in the *Gazette of India* for 1891, 1, 248.

procedure in civil suits is not governed by the usual Civil Procedure Code, but by a simpler set of rules framed under section 6 of the Scheduled Districts Act. Rules under this same enactment have also been drawn up for the guidance of the Agent in other branches of the administration.

Outside the Agency, the civil tribunals of the district are of the usual four grades, namely, the courts of village and district munsifs, the Sub-Court and the District Court.

District munsifs' courts have been established at Rajahmundry, Cocanada, Peddápúram and Amalápúram. That at Amalápúram has a heavier file than any of the others.

The Sub-Court is stationed at Cocanada. It was established in 1874. Another Sub-Court was in existence at Rajahmundry for a few months in 1895, began regularly working there in 1903, but was abolished in 1905.

The District Court is held at Rajahmundry. Before the district was reduced in size by the transfer to Kistna of the taluks south of the Gódvári, the file of this court was very heavy. In 1902 the number of suits instituted in, and of appeals disposed of by, it was greater than in any other District Court in the Presidency.

As in other wealthy districts, the amount of litigation in Gódvári is great. In 1902, in the district as then constituted but excluding the Agency, more suits were instituted per unit of the population than in any other in the Presidency excepting Tanjore, North Malabar and Tinnevely. In the Agency, on the other hand, litigation is rarer than in any other tract in Madras except the Agencies of Vizagapatam and Ganjam.

The registration of assurances is effected in the usual manner. A District Registrar is stationed at Cocanada and sixteen sub-registrars are located at Rajahmundry, at Amalápúram, Kottapéta and Mummdivaram in Amalápúram taluk, at Razole in Nagaram, at Peddápúram and Prattipádu in Peddápúram, at Rámachandrapuram, Dráksharámam, Álamur and Bikkavólu in Ramachandrapuram, at Cocanada and Coringa in Cocanada taluk, and at Pólavaram, Pithápúram and Tuní. There are no sub-registrars in the Chódavaram or Yellavaram Agency tracts but in Bhadráchalam the Registration Act was extended to certain villages in 1906 and the taluk sheristadar acts as sub-registrar.

The criminal tribunals are of the same classes as elsewhere. The village magistrates have the usual powers, both within and outside the Agency. Bench Courts, invested with third-class powers to try offences under the Towns Nuisances Act, the Municipalities Act and the conservancy clauses of the

Police Act, have been established at Rajahmundry and Cocanada. The latter also tries cases of assault and voluntarily causing hurt under the Penal Code.

All the tahsildars and deputy tahsildars in the district have second-class magisterial powers, but in Amalápuram, Cocanada, Peddápúram, Rajahmundry and Rámachandrapuram there are stationary sub magistrates, and the tahsildars of these taluks hear few cases. At Bhadráchalám, also, there is a second-class magistrate in addition to the tahsildar. Deputy tahsildars with second-class magisterial powers are stationed at Kottapéta in Amalápuram taluk, Coringa in Cocanada taluk, Prattipádu in Peddápúram taluk and Álamur in Rámachandrapuram and independent deputy tahsildars with similar authority at Pithápúram and Tuni. As elsewhere, appeals from the second-class magistrates, and practically the whole of the first-class cases arising in the district, are decided by the Divisional Officers, who are severally stationed at Cocanada, Peddápúram, Rajahmundry, Pólavaram, and Bhadráchalám. The District Magistrate and the Sessions Judge have the usual jurisdiction, except that, as already mentioned, the latter has no powers in the Agency, his place in that area being taken by the District Magistrate.

Gódavari occupies a rather unenviable position among the Madras districts in respect of the total amount of registered crime which occurs within it, but a very large proportion of the offences committed are common thefts, and another considerable percentage are simple house-breakings. In crime of the graver kinds—robberies, dacoities and murders—its position is not exceptional, and indeed dacoities are rare outside Polavaram.

The nearest approach to a criminal tribe is afforded by the Yánadis or Nakkalas. These people are called indifferently by either of these two names, though they themselves resent the appellation Nakkala. This word seems to be derived from *nakka*, a jackal, since the tribe is expert in catching these animals and eats them. The Nakkalas are generally of slight physique, dark of complexion and very dirty in their habits. At Pithápúram there are some of them who are more strongly built and perhaps spring from a different strain. On the register of criminal gangs kept by the police there are at the present time 114 men, 121 women and 236 children belonging to this caste. The most troublesome sections of them are those in the Rámachandrapuram and Peddápúram taluks.

The Nakkalas are by nature wanderers and dwellers in fields and scrub jungle, who make a scanty living by catching jackals, hares, rats and tortoises, by gathering honey, and by

finding the caches of grain stored 'up by field-mice To people with such slender means of subsistence the gains of petty pilfering offer a strong temptation, but the Nakkalas seldom commit any of the bolder kinds of crime, though now and again they have been known to rise to burglary more rarely to robbery, and sometimes even to dacoity Of late years most of them have settled down permanently in villages They live in very small huts made of palmyra-leaves They add to their earnings from their hereditary occupations the wages to be earned by light cooly work in the villages, and are consequently looked upon by the rest of the community as rather an acquisition when cheap labour is in demand They are sometimes employed as horse-keepers by subordinate officials, and their women are very useful as sweepers, since, though they are exceedingly dirty in their persons, they are not considered to carry ceremonial pollution If treated well, they live in this hand-to-mouth fashion and give no trouble to the authorities, and their present unfortunate notoriety as a criminal tribe is largely due to the performances of one notorious gang of them in Ramachandrapuram taluk This gang, led first by one well known criminal and later by another, consisted of about fifteen men and lived an entirely nomadic life subsisting on the proceeds of its thefts and burglaries It has now been broken up ten of its members being in jail (most of them on long sentences) and the others, with one exception, being in hiding, and probably the criminal propensities of the Nakkalas will henceforth be less in evidence

Three other classes of people, namely, some of the Málas, the 'Pachayappas,' and the 'Peddinti Gollas,' have pronounced criminal tendencies Two small sets of Malas in the central delta (one in the limits of Kottapéta station, and the other in those of Nagaram station) have a decided turn for burglary A number of convictions are on record against them The Pachayappas consist of six wandering gangs, containing 68 registered male members, who are constantly on the move and are under police supervision They originally came from the direction of Guntur They ostensibly live by begging, but there is little doubt that the proceeds of crime contribute to maintain the men in the robust condition they exhibit and to support the crowd of children who belong to them Cases are from time to time established against them, and some of them have been convicted of burglary and theft The Peddinti Gollas comprise four gangs who appeared in the district in 1902 They are said to have come from Kurnool, and to

have committed a large dacoity in Kistna. Only thirteen male members of these now remain.

Up to the time of the permanent settlement in 1802, such police as existed were under the orders of the renters and zamindars, and were in some cases remunerated by grants of land on favourable tenure. In the larger towns kotwáls with separate establishments were maintained. At the permanent settlement, the zamindars' control over the police was withdrawn, and Government assumed the responsibility of enforcing law and order. In the hill country, which was excluded from the permanent settlement, the muttadars were, however, still expected to keep order within their muttas, and this responsibility is even now insisted upon. The muttadars of Chódavaram and Yellavaram are bound by their sanads to 'afford every assistance to the Sircar in maintaining quiet and order, by giving timely information of any disturbance or offence against the laws, and apprehending and delivering up to the authorities robbers, rebels and other bad characters'.<sup>1</sup> As a matter of fact they perform this service indifferently, and are of little use in suppressing or detecting crime.

The existing police force, which like that in other districts was constituted by Act XXIV of 1859, is in charge of a District Superintendent stationed at Rajahmundry, aided by an Assistant Superintendent at Bhadráchalam who has immediate control over the police in the Agency.

Statistics of the force, and of its distribution among the various taluks, will be found in the separate Appendix. A reserve about one hundred strong under an inspector and two sergeants is maintained at Rajahmundry, and consists of picked men, better armed and drilled than the others, who are qualified to deal with disturbances. As a rule the inspectors' divisions are included within the limits of only one taluk or revenue division, but a few unimportant exceptions occur. Dowlaishweram in Rajahmundry taluk, for example, is included in the limits of the Álamur station, and Pithápúram lies entirely in the Súriyagaopéta (Cocanada) police division.

Besides the regular police, there are 477 talayáris or rural constables, who, as in other districts, are required to afford help to the police, especially by reporting the presence of suspects within their villages and the occurrence of crime, and by aiding in the detection of offences committed within their limits. They are reported to be of little real assistance.

<sup>1</sup> See Chapter XI, p. 177

At Chódavaram is located the Special Hill Reserve, who are armed with Martini-Henry rifles and are kept up primarily to cope with any overt disturbances which may occur in the wild Agency country. They number about 40 men, are in charge of the divisional inspector, and perform the ordinary duties of the station.

At Rajahmundry is one of the eight Central Jails of the Presidency. It was established in 1864, is constructed on the radiating principle, and will hold 1,089 criminal, and 20 civil, prisoners. Cellular accommodation has been provided for 400 convicts, and the rest are kept in wards. The convicts are employed in a variety of industries, manufacturing, among other articles, carpets, coarse woollen blankets, sandals, tin and brass work, furniture of various kinds, and fabrics woven from cotton, such as sheeting, rugs, table-cloths, napkins, etc. Fly shuttles are used in some of the looms. They enable double the ordinary quantity of work to be accomplished, but have not yet been rendered suitable for the finer fabrics.

Thirteen sub-jails exist in the district, namely, one at each of the taluk head-quarters and at the deputy tahsildars' stations of Alamur (Ramachandrapuram taluk), Kottapéta (Amalápuram), Prattipádu (Peddápuram), Pithápuram, Tuni and Pólavaram. These have accommodation for 186 prisoners in all.

---

## CHAPTER XIV

### LOCAL SELF-GOVERNMENT

---

THE LOCAL BOARDS—The Unions—Finances of the Boards THE TWO MUNICIPALITIES—Cocanada municipality—Rajahmundry municipality

OUTSIDE the two municipalities of Cocanada and Rajahmundry referred to below, and excluding Bhadráchalam taluk in the Agency, local affairs (roads, hospitals, schools and sanitation) are in the hands of the District Board and four taluk boards subordinate to it. The areas in charge of these latter have been changed from time to time, and the most recent alteration was effected in April 1905. The four boards are now those of Cocanada, in charge of the Cocanada taluk and the Pithápúram and Tunī divisions, Peddapuram, with jurisdiction over the taluks of Peddapuram and Rámachandrapuram, Rajahmundry, comprising the Rajahmundry, Amalápúram and Nagaram taluks, and Pólavaram, which administers matters in the Agency divisions of Pólavaram, Chódavaram and Yellavaram.

Prior to 1902 none of the Agency tracts were included within the operation of the Local Boards Act, and the roads, educational and medical institutions, and sanitation within them were in charge of the Revenue authorities, aided by advice from the Public Works and other expert departments. In 1902 the whole of the Agency as it then existed was brought under the Act, but in 1905<sup>1</sup> Bhadráchalam was withdrawn again from its operation and is to be managed henceforth on the same system as was in force before 1902. The taluk is remote, thinly-populated and covered with jungle, and the income derivable within it from the ordinary sources of taxation provided for by the Local Boards Act is quite insufficient to meet the expenditure which is necessary. Heavy contributions towards its local needs have consequently always been made from Provincial funds. The same state of things exists in the three Agency divisions which make up the charge of the present Pólavaram taluk board, and a similar contribution to its exchequer has been necessary to save it from insolvency.

<sup>1</sup> See G O No. 227 L, dated 27th February 1905.

Fifteen of the larger towns in the district have been constituted unions with the usual powers and functions. These are Dowlaiswaram, Amalápuram and Kottapéta under the Rajahmundry taluk board, Peddápúram, Jagapatinagaram, Yelesvaram, Jaggampéta, Rámachandrapuram, Dráksharámam, Mandapéta and Bikkavólu under the Peddapuram board, and Gollamamídáda, Samalkot, Pithápúram and Tuni under the taluk board of Cocanada. The chief item in their receipts is (as elsewhere) the house-tax, which is everywhere levied at the maximum rates. The average tax per house for 1905-06 is estimated to work out to As 12-1.

The separate Appendix to this volume contains statistics of the receipts and expenditure of the various local boards. The chief source of income is, as usual, the land cess, which is levied at the ordinary rate of one anna in every rupee of the land assessment. The chief item of expenditure is the upkeep of the roads and the medical and educational institutions. These have already been referred to in Chapters VII, IX, and X respectively.

The only two municipal towns are Cocanada and Rajahmundry. In the separate Appendix appear particulars of the receipts and expenditure of their councils.

Cocanada was one of the municipalities established under the first regular municipal act (Madras Act X of 1865) and the council was constituted in 1866. It now consists of twenty members of whom eight are nominated and twelve elected. The privilege of electing its own chairman was conferred upon the council in 1886, was withdrawn in 1893, but was restored again in 1897. The appointment of a paid secretary was sanctioned in 1899. He is selected by the municipal council subject to the approval of Government.

Several considerable permanent improvements have been effected in the town by the municipality. First in importance come the Victoria water-works, which were completed in June 1903. The water is obtained from the Samalkot canal, and a large reservoir to contain two months' supply has been excavated in the water-works premises. The scheme was designed to supply 400,000 gallons of water per diem (at the rate of 10 gallons per head of the population of the town) and the supply is expected to be perennial. The water is drawn from the reservoir just mentioned through filter beds into a second reservoir, and is thence distributed throughout the town by cast-iron pipes and fountains. Three Worthington engines of 10 horse power each are employed in the works. The cost of the scheme was estimated at Rs 4,66,200, but actually

amounted to only Rs. 4,44,800 Of this sum Rs 1,44,500 were lent by Government. The scheme was carried out by the Public Works department

Other permanent improvements effected by the council are the construction, at an outlay of Rs 18,137, of the bridge across the Yelérú, the revetting of the harbour creek for a length of some 270 yards at a cost of Rs 8,000 in 1902-03 and the reclamation and laying out of a considerable strip of ground formerly covered by the creek, the building of three public markets, the two larger of which cost Rs 15,000, and the erection of two slaughter-houses costing Rs. 4,000 and of three municipal school-houses at an average cost of some Rs 1,500 apiece. The clock tower near the bridge was constructed by a private gentleman some 20 years ago, but the municipality contributed Rs 1,000 to its erection and it now has charge of the building

No drainage scheme has yet been prepared for Cocanada, but a portion of the town is served by the main sewer leading into the harbour creek which was constructed by the Public Works department at a cost of Rs 10,000 out of Provincial funds some years ago Some smaller branch drains lead into this, and the municipality has kept both these and the main sewer in repair at considerable cost

The council's chief contributions to the medical and educational institutions within the town include the aiding of ten primary schools, the management of a lower secondary and twelve more primary schools, and the upkeep of a hospital and dispensary

The municipality at Rajahmundry was also founded in 1866. The council originally consisted of ten members, but since 1895 the number has been eighteen The right of electing some of the members was granted in 1884, and twelve councillors and the chairman are now appointed by election A paid secretary was first entertained in 1897-98 He is selected by the council, subject to the approval of Government.

Very few permanent improvements of any magnitude have been executed by the municipality Drinking-water is obtained from the Gódávári river and the Kambala tank, and nothing of note has been done from municipal funds to improve the supply Similarly no considerable improvement in the drainage has been effected or worked out Three markets have been constructed and two slaughter-houses A choultry founded in 1873 by Mr H. Morris, a former Judge, and called by his name was completed by the municipality

in 1874 at a cost of Rs. 1,500. A rest-house for homeless poor has been constructed at an outlay of Rs. 500, and additions are being made to it in order to accommodate lepers and persons suffering from other incurable diseases.

The council has partly supported the hospital in the town since 1871, and keeps up four upper primary, four lower primary, and one lower secondary school. It also maintains the Morris choultry, two other small institutions called the Kambham and Durbha choultries, and a travellers' bungalow.

Government have sanctioned Rs. 16,000 for revetting the river bank to prevent further erosion, which was becoming alarming, and a bund to protect the town from inundation during heavy floods is in contemplation.

---

## AMALÁPURAM TALUK.

1. AMALÁPURAM taluk is a triangular island enclosed between the Vasíshta, Vainatáyam and Gautamí branches of the Gódavari and the sea. With the smaller Nagaram island, which is similarly bounded, it comprises the whole of the central delta of the Gódavari river. Statistics regarding it will be found in the separate Appendix to this volume. It is the most populous taluk in the district and the density of its inhabitants to the square mile (548) is well above the average of the plain taluks. Most of the wet land is irrigated by the central delta canal, but the area under wells, though not considerable, is far greater than in any other taluk in the district.<sup>1</sup> Of the classified area, 87 per cent. is made up of

<sup>1</sup> See Chapter IV, p. 89.

alluvial earth and the rest of arenaceous soils. The average rainfall is the highest in the district, namely 44·88 inches in the year.

The taluk is an agricultural area, and boasts few other industries. Dēvāngas weave white cloths in fair quantities in several villages, but the industry has greatly declined since the days when Bendamurlanka was a busy port and one of the outlets for the great trade of the East India Company in cotton piece-goods. A large cattle-fair, known beyond the district, takes place at Ambājpeta. A number of places of local religious interest exist, but only two of these, namely Vānapalli and Vādapalli are known much beyond the limits of the taluk. Péruru is the home of a class of Brāhmins who have immigrated from the Tamil country and are called Kōṇa Sīma Drāvidas. Relics of the Jains are found at Nūdunuru and Atreyapuram, and the large wells so common in the taluk are popularly ascribed to the followers of that creed.

**Amalapuram**, the head-quarters of the taluk and a union, is situated on the main canal of the central delta 38 miles south-east of Rajahmundry. Population 9,510. It contains the offices of a tahsildar, sub-registrar, stationary sub-magistrate and district munsif, a travellers' bungalow, a coronation rest-house for natives, a local fund hospital (founded 1880) and high school, and a police-station.

Popular legends say that Amalapuram was the capital of the king of Pāṇchāla, the father-in-law of the Pāṇḍava brothers, and the taluk is known throughout the district as the 'Pāṇchāla country'. Another name for it is the *Kōṇa Sīma*, or the 'end country'. The town contains two temples of local repute. One was built for an idol of Venkatasvāmī which was found there some years ago by a man of the place, who, as usual, stated that he was told of its existence in a dream, the other is a shrine to the serpent god, Subbarāyudu, the festival at which, held in Mārgasīram (December-January) is fairly attended. A little weaving of white cloths goes on, counts as fine as 150s being used for the best work, and a little wood-carving of a good class.

**Ambājpeta**. A hamlet of Māchavaram (population 5,661) which lies five miles west by north of Amalapuram. Contains a police-station and is famous for its large cattle-fair, which is held every Wednesday and is visited even by buyers from other districts. The place is a centre for the manufacture of coconut ropes and oil, and a large number of general traders live there.

**Aynavalli** Eight miles north of Amalápuram, population 3,363 Its temple to the belly-god Siddhi Vináyaka is well known to the people of this and adjoining districts, and vows are frequently made therein, scarcely a day passing when pilgrims do not visit it to discharge their obligations by breaking cocoanuts before the god. The temple is supposed to have been built to propitiate the belly-god by Daksha, the father-in-law of Siva, before he performed the famous *yágam* at Dráksharámam referred to in the account of that place on p 250 below Aynavalli is also well known to natives as the birth-place of two famous Sanskrit pandits, Bulusu Achayya and his son Papayya Sástri, who died not long ago

It has a hamlet called Muktésvaram ('the place of beatitude') or Kshana Muktésvaram ('the place of instantaneous beatitude') and the names are accounted for by a local legend The wife of a sage, says this story, was seduced by some celestial being and cursed in consequence by her husband She purified herself by a bath in the Gódavari and took to a life of contemplation Ráma, when returning from Lanka, took compassion on her forlorn state and persuaded Siva to give her *mukti* or beatitude

**Bandámulanka** Four miles west by north of Amalápuram Population 2,796 The village is known for the manufacture of excellent white cloths Some 200 Devánga houses are engaged in the industry, and use thread of the finer counts, up to 130s

**Bendamurlanka** Twelve miles by road south-south-west of Amalápuram It is a hamlet of Komaragiriapatnam (population 5,757) and contains a police-station, a travellers' bungalow and a vernacular lower secondary school for girls It is situated at the mouth of the Vainatéyam branch of the Gódavari, and was selected as the site of an English factory in 1751 This was seized without resistance by Bussy in 1757, but was recovered after the battle of Condore It was once an important centre for the trade with Europe in cotton piece goods Bendamurlanka is still technically a port, but has no harbour and has not been visited by any ships for a long time

**Gannavaram** Nine miles west by north of Amalápuram Population 2,101 Contains a small market and a travellers' bungalow It gives its name to the fine aqueduct which crosses the Vainatéyam Gódavari there and is described in Chapter IV According to the local legend, it was at Gannavaram that the sage Vainatéya stole some of the water of the Vasushta Gódavari to make the river of his own which goes by his

**name** The sage Vasishtha cursed the Vainatéyam, and a bath in it is only sanctifying if taken on a Sunday. The lingam in the Siva temple is said to have been brought from the Nerbudda river by the kite Garuda, and the supposed marks of the bird's claws are pointed out on it.

**Kesanakurru** Eleven miles north-east of Amalápuram in a straight line. Population 3,556. A bath in its tank is supposed to confer religious merit. The sage Vyása who (see p. 250) is said to have founded Dráksharámam, once, say the local legends, intended to establish a second Benares at Késanakurru, but heard a voice saying 'Kasi nakuru,' 'do not make a Benares.' He accordingly founded Dráksharámam instead, but Késanakurru was named after the words of the divine warning, which have since become corrupted to their present form.

**Mandapalli** Fourteen miles north-west of Amalápuram. Population 542. The god at the Siva temple here, Mandésvara, is bathed in oil every Saturday, and a common form of vow consists in a promise to provide the oil for this bath Saturdays coinciding with the second day before full-moon day are particularly propitious for the fulfilment of this vow.

**Muramalla** Thirteen miles north-east of Amalápuram. Population 1,448. The Siva temple here is visited by numerous pilgrims, and the usual vow taken by the devout is a promise to celebrate the marriage of the god. Hardly a day, it is said, passes without this ceremony being performed, and there is a proverb to the effect that at Muramalla there is a marriage every day and the garlands are always green. The temple is rich, and is said to have been founded and endowed 'about 500 years ago' by the widow of a Kóna Síma Dravida Bráhmaṇ.

**Palivela** Twelve miles north-west of Amalápuram. Population 7,509. The Koppésvara temple here contains a number of inscriptions, some of which have been copied by the Government Epigraphist (Nos. 498 to 505 of 1893). The oldest records a gift by a minister of one of the Vélanáṇḍu family and is dated 1172 A.D. None of the others are earlier than the fourteenth century. One on the east wall of the shrine belongs to the time of the great Kákatiya king Pratápa Rudra, and is dated in 1317, or not long before his fall<sup>1</sup>. The *nandi* in front of the temple is popularly declared to have been mutilated by order of Aurangzeb.

In former times dancing-girls used to sleep three nights at the commencement of their career in the inner shrine, so as to

<sup>1</sup> See Government Epigraphist's Annual Report for 1894, pp. 22 and 23.

be embraced by the god. But one of them, it is said, disappeared one night, and the practice has ceased. The funeral pyre of every girl of the dancing-girl (Sāñi) caste dying in the village should be lit with fire brought from the temple. The same practice is found in the Srīrangam temple near Trichinopoly.

**Palivela** forms part of the union of Kottapéta (population 10,369), in which Vādapālayam and Kammareddipālayam are also included. Kottapéta contains the offices of a sub-registrar, a deputy-tahsildar and sub-magistrate, a local fund dispensary (founded 1892), a police-station, a small market, and an English lower secondary school for boys. The travellers' bungalow is in Palivela itself.

**Péruru** Five miles south-west of Amalápuram. Population 5,864. Contains a Sanskrit school. The place is noteworthy as being the home of a colony of Tamil Bráhmans, called Kóna Sima Dravidas, who came, at some date unknown, from Valangimán near Kumbakónam in Tanjore district. The story of their emigration is recounted (with impossible details) in the village itself and is also known in Madras. They no longer speak Tamil, but their village, both in appearance and in general arrangement, is so like a village of the south that it is popularly declared that if a Tanjore man could be suddenly transported thither and set down in the middle of it, he would think he was in his native country.

The original emigrants are said to have been fifteen families of twelve *gótras*, seven of which belonged to the Vadama, and five to the Brahacharnam, subdivision of the Tamil Bráhmans.

They first settled at Ráñi, but difficulties arising, they eventually obtained from a rája a grant of as much land as an elephant could traverse in a given space of time. Thus they secured possession of the village of Péruru. They increased and multiplied, and many of them emigrated to Ganjám and Vizagapatam, where they call themselves 'Péruru Drávidas'. They are not popular in the district, and stories in disparagement of them are common. The part they play in the festival at Antarvédi in Nagaram taluk is referred to in the account of that place below.

Pérúru, like Amalápuram, is connected by legend with the Mahábhárata, for it is believed that the tank in the hamlet of Chindádu Garuvu is the identical sheet of water in which Arjuna saw the reflection of the flying fish which he shot in order to win the hand of Draupadi. A bath in this tank on

the four Sundays succeeding the New Year's day is considered to have a sanctifying effect

Numbers of large and ancient revetted wells exist in the village, and are known as the Reddis' wells. The story goes that a Bráhmaṇ who had the philosopher's stone was murdered by a Reddi, and that his ghost haunted the murderer and gave him no peace until he built a number of large wells at which it might quench its thirst.

The village is a centre of the export of cocoanuts and cocoanut oil. One family of Muchis does some good wood-carving.

**Ráli.** Twenty miles north west of Amalápuram, population 4,045. Contains a travellers' bungalow. A section of the Dowlaishweram anicut was originally called the Ráli anicut, and the name occurs frequently in the early accounts of the work. The village was once the head-quarters of a taluk. It is also said to have been one of the first halting-places of the Kóna Síma Drávida Bráhmans just referred to. There is a 'Tamil street' (*Arava vidí*) in it even now. The image of Vishnu in the local temple is represented as half male and half female, and the legend connects this fact with the well-known story of how the *asuras* and *devatas* churned the sea to obtain the nectar of immortality. When the nectar rose to the top, Vishnu appeared in the form of a beautiful woman, so as to divert the attention of the *asuras*, was seen by Siva and was pursued by him as far as Ráli.

**Vadapalli.** Three miles north by east of Ráli. Population 915. It is well known for its temple to Venkata or Venkanna, which is considered by the people of this neighbourhood to be almost as sacred as the famous shrine of the same god at Tirupati in North Arcot. The festival to commemorate the *marriage of the deity lasts for five days in Chaitra (April-May)*, is very largely attended and is a great occasion for the performance of vows.

**Vanapalli.** Eight miles north-north-west of Amalápuram. Population 4,686. A large festival in honour of the village goddess Pallálamma takes place there every year. Marvelous stories are told about this deity: the size and age of her image alter according to the size and age of the worshipper, it sweats profusely and its clothes have to be wrung out every morning, 'an engineer officer' (name unknown) was turned blind some 40 years ago for entertaining the idea of demolishing the temple to make room for a canal, and the stone jackal in the shrine is one which used to defile the holy precincts every night, and was petrified in consequence.

At the great festival, which lasts for a week in the month of Chaitra (April-May), a hook-swinging takes place, but nowadays the man is swung in a basket, or by a hook run through his belt. The festival is a great occasion with the jungle 'Chentzus,' who go there to celebrate their marriages and settle their caste disputes

**Vyágresvarapuram** Ten miles north-north-west of Amalápuram A hamlet of Pullétikurru, the population of which is 3,516 The name means 'the place of the tiger god.' It is explained by a legend to the effect that a Bráhmaṇ, being pursued by a tiger, climbed a sacred *bilva* tree, and thence addressed the animal with mantrams and prayers, which so affected its feelings that it turned into the stone lingam which is still worshipped under the name of Vyágresvara

A fairly large festival takes place in the village on the Sankránti (i.e. Pongal) day, when some fifteen of the neighbouring gods come to visit this deity

## COCANADA TALUK.

COCANADA lies on the coast north of the Gó dávar, and all but the northern portion of it is included within the delta of that river. Over 86 per cent of the soil is consequently alluvial, and most of it is irrigated. Statistics regarding these and other points will be found in the separate Appendix. The taluk is one of the most densely populated in the district and the average revenue payable on each holding is over Rs. 40, or higher than in any other

Most of the taluk belongs to Pithápúram zamindari. It is well supplied with means of communication. The Madras Railway crosses the north of it, and a branch runs through the heart of it to its head-quarters, the busy sea-port of Cocanada. This town and the old port of Coringa are connected with the interior by good waterways. Roads are plentiful and, on the whole, good. Trade is consequently large, and many important firms are located at Cocanada, but industries are few. Rice-milling at Cocanada and sugar-refining at Samalkot are the only considerable undertakings, and the indigenous industries are of an elementary kind. Coarse weaving goes on at several places, chintzes are largely stamped at Gollapálaiyam, Cocanada and Samalkot, and metal vessels are made at Cocanada, Gollamámúdáda and Peddádáda. The taluk contains several temples of no small local reputation. These are referred to below.

Bhímavaram is now a portion of Samalkot, but it has a character of its own. The full name of the place as given in inscriptions is Chálukya Bhímavaram. Under the Mughals it appears to have been called Mruthyujanagar<sup>1</sup>. The Bhímésvara temple is locally famous both for its architectural beauty and for its sanctity. It possesses a huge lingam which is said to be similar to those in Dráksharámam (in the Rámachandrapuram taluk), Amarávati (or Amará-ráma) in the Guntur district, Pálakolli (also called Kshira-ráma) in the Kistna district and 'Kumará-ráma,' a place not identified. The story goes that the god Subrahmanya killed a demon named Tárakásura who was wearing a huge lingam round his neck, and that this was broken into five pieces, one of which fell at each of these villages. The place is sacred on this account, and a bath in the Bhímagundum tank in front of the temple is believed to confer holiness.

<sup>1</sup> Mackenzie MSS., Local Records, 1, pp. 496-98.

There are a number of ancient inscriptions in both the Bhímésvara and Nárāyanasvāmi temples in the village. Thirty of these have been copied by the Government Epigraphist (Nos. 460 to 489 of 1893). Some others, mostly of a private nature, are given in one of the Mackenzie MSS.<sup>1</sup> The most ancient is one among the former dated 1087 A.D. A few of them mention members of the Reddi dynasty. The Mackenzie MS. gives what purports to be a copy of a copper-plate grant of Kátama Véma Reddi to the Nárāyanasvāmi temple dated 1393 A.D.

**Chollangi** Lies six miles south of Cocanada, near the coast, and on one of the traditional seven holy mouths of the Gódávarī. It is the first place visited by those who are making the 'pilgrimage of the seven mouths.'<sup>2</sup> The branch of the river which has its mouth here is said to have been brought down by the sage Tulya, and is accordingly called the Tulya-ságara-sangam. It is really nothing but the Tulya Bhága drain. The village is otherwise quite insignificant, and its population is only 577.

**Cocanada**, the head-quarters of the taluk and district, is a municipality of 48,096 inhabitants and one of the busiest sea-ports in the Presidency. It is situated on the western side of the Coringa bay, and is connected by a branch with the North-east line of the Madras Railway. Its trade has been referred to in some detail on pp. 113-7. It is the head-quarters of the Collector (the Judge resides at Rajahmundry), the District Forest Officer, Local Fund Engineer, Assistant Commissioner of Salt, Abkārī and Customs, District Medical and Sanitary Officer, District Registrar, head-quarters Divisional Officer (either a Deputy Collector or an Assistant Collector) and Government Chaplain, and of the Port Officer in charge of the harbour and port. The minor officials stationed there are the tahsildar, district munsif and stationary sub-magistrate. The place is also the head-quarters of a company of the East Coast Rifle Volunteers, and contains a municipal hospital (founded 1856), a dispensary (founded 1888), a women and children's dispensary (founded 1895), two police-stations, a travellers bungalow, a large private choultry, a private native rest-house, the Pithápuram Raja's college, an English lower secondary school for boys, and two English, and four vernacular, lower secondary schools for girls. Its medical and educational institutions have been referred to in Chapters IX and X respectively, and the doings of its

<sup>1</sup> Local Records, ii, 213-30.

<sup>2</sup> See Chapter I, p. 6.

municipal council in Chapter XIV The salt factories in the suburb of Jagannáthapuram and Penugudur are mentioned in Chapter XII The town is situated in the Pithápuram zamindari

Jagannáthapuram, which lies south of the harbour, is the only part of the place which possesses any historical interest.

It was the site of a Dutch Factory which, with Bimlipatam in Vizagapatam and Pálakollu in Kistna, were 'represented to be held under Fermans granted by the Nizam and confirmed by the Mogul or Emperor of Delhi, bearing various dates from A D 1628 to A D 1713 and by a Cowle granted by Hajee Houssun in A D 1734 and A D 1752 by Jaffur Ally Khan The two last mentioned persons were Naibs or deputies of the Nizam in the Circars The Dutch are stated to have first occupied these factories about the year A D 1628.'<sup>1</sup> Their factory included the dependent villages of Gollapálem and Gundavaram and they had a mint, at which were made the coins issued from Bimlipatam<sup>2</sup>

In 1781 war broke out between the English and the Dutch, and the settlements of the latter on the Coromandel coast were seized Jagannáthapuram was in that year 'a place of some consequence The factory house, fortified I believe,<sup>3</sup> and all the public buildings were demolished in that year'<sup>4</sup>

In 1784 peace was declared, and their factories were handed back to the Dutch in the following year During the wars of the French Revolution (1789-95) the settlements were again captured by the English, but were once more handed back in 1818 by a convention of 1814 They were finally made over to the English Company in 1825, with the other Dutch possessions in India, under the operation of a treaty of 1824 between Holland and England

The Dutch factory played a small part in the campaign of 1758-59 by which the Northern Circars were taken by the English from the French French officers wounded at the battle of Condore were permitted to go to Jagannáthapuram on parole In 1759 a small force of Frenchmen landed at Cocanada to intrigue with Jagapati Rázu at Samalkot, but, as has been mentioned in Chapter II, they were driven by the English to take refuge in the Dutch fort, and their surrender was enforced under protest from the Dutch

<sup>1</sup> Hodgson's report on the Dutch Settlements, quoted in Mr Res's *Monumental remains of the Dutch East India Co* (Madras, 1897), 52

<sup>2</sup> Mr Res's book, 65, 66

<sup>3</sup> Apparently by rude ramparts of earth, Pinkerton's *Collection of Travels*, xi, 303

<sup>4</sup> Hodgson's report.

The first impetus to the town of Cocanada was given by the silting up of Coringa bay and the consequent decline of Coringa as a port and dockyard. Cocanada gradually took its place. A second impulse was given during the American Civil War (1861), when the town suddenly rose into great importance as a place of shipment for the cotton pressed at Guntur.

Cocanada is the head-quarters of the Canadian Baptist Mission and contains a Roman Catholic church and convent. In the Protestant church is perhaps the finest organ in the Presidency outside Madras City. It was built from private subscriptions, of which a large portion was given by Messrs Simson Bros, about twenty years ago. A cemetery near the Collector's house contains some old European tombs, the earliest of which is dated 1825 and a list of which is in the Collector's office. In the Jagannáthapuram cemetery are many more graves the oldest of which is a monument to a Dutch family the members of which were buried between 1775 and 1778. From the latter of these years up to 1859 the churchyard does not seem to have been used, but from that year onwards the burials have been numerous.

Of the industrial concerns in the town, the Local Fund workshops (near the Collector's office) have been referred to in Chapter VI. The town also contains three rice mills and five printing presses. Of the latter, only two (one called the Sujana Ranjani press and one managed by Messrs Hall, Wilson & Co) are of any importance. The latter prints general matter and the former Telugu books, and a weekly newspaper and a monthly magazine called respectively the Ravi and Savitri. In another press a monthly magazine called Sarasvati is printed. There are also about a dozen native factories which each employ several handpresses for making castor oil.

The vernacular name of the town, Kákináda, is supposed to have some connection with the phenomenal number of crows which live in it. A merchant recently opened his rice godowns to trap these marauding birds, and then, closing the doors, had the intruders killed. No fewer than 978 were accounted for in one morning in this way, but without sensible diminution of the nuisance.

**Coringa** (vernacular *Kórángi*) Nearly ten miles south of Cocanada. Population 4,258. It contains a travellers' bungalow, a native rest-house, a police-station and the offices of a deputy tahsildar who is also a sub-registrar. It was once one of the greatest ports and ship-building centres on this coast, but, owing to the silting up of the channel which leads

to it, it is now of no commercial importance. Coringa appears in Pliny's pages as the name of a cape, but the village is now several miles from the sea. It was for long the residence of British merchants, but little now remains to call them to mind. There are a few old tombs in the graveyard—some dating back to 1816<sup>1</sup>—and portions of a few bungalows survive. One forms the present deputy tahsildar's office. Two others, one of which must have been a fine building, belonged to a certain Mr. Graham, whose name is still well known. The latest date in the churchyard is 1857, and apparently English merchants did not live in the place long after that.

An interesting account of the town as it was in its busiest days was given by Mr. Topping, an astronomer in the service of the Madras Government, who visited it in 1789. He deplored in particular the want of police which he said were badly needed owing to the number of ships—English, French, Dutch and Portuguese—that anchored in the road and the many disorderly people that landed from them. 'Nothing is more common,' he said, 'than night broils and frays among people under the influence of intoxication. Frequent thefts and even attempts to assassinate happened during my short stay, which induced me to apply for a guard of sepoy, to protect myself and the Company's property from violence and rapine.' A curious contrast, this, to the quiet country village of to-day.<sup>1</sup>

It appears that the present town of Coringa, which is on the east of the river, was 'built' about 1759 by Mr. Westcot, a resident of Injaram, while what is known as 'old Coringa' on the western bank, is older than this.<sup>2</sup> The bulk of the inhabitants and the deputy tahsildar live in the former, but there are a few good houses in the latter. The village suffered severely from the hurricane of 1839, and has twice (in 1787 and 1832) been nearly swept away by tidal waves. The old village was also damaged by the tidal wave of 1706.

The place is indeed a shadow of its former self. Its sea-borne trade was valued in 1877-78 at Rs. 8,22,000, and in 1880-81 at Rs. 3,20,000, but by 1884-85 it had fallen to Rs. 33,000, and since 1898-99 it has ceased altogether.

Moreover the neighbouring village of Tállarévu has now monopolised the ship-building that was formerly the pride of Coringa. In 1802 Mr. Ebenezer Roebuck, a private gentleman residing at Coringa, constructed at a great cost a dock near

<sup>1</sup> See the list in the Collector's office.

<sup>2</sup> *Selections from the Records of the Madras Government* (Madras, 1855), xix, p. 24.

the old town capacious enough to receive any ship of the Royal Navy not drawing more than fourteen feet. H.M.S. *Albatross* and other ships were repaired in this. It was 155 feet long, and its breadth was 51 feet at the bottom, and 76 feet at the top. The masonry at the bottom was five feet thick. It used to be pumped dry, after a ship had been admitted, by two steam engines in a few hours. Now it is choked to the level of the ground with earth, and nothing is to be seen of it but the tops of the brick walls surrounding it. No one seems to remember its being used. Till quite recently, however, ships were repaired in mud docks at old Coringa.

The silting up of the port has progressed very rapidly in recent years. Between 1806 and 1861 the anchorage for big ships had to be moved five or six miles to the north. At the beginning of the last century a frigate drawing thirteen and a half feet was got over the bar, and a report to Government written in 1805 records the opinion that 'any ship not drawing more than twelve and a half feet of water may easily enter the mouth of the river in two springs at any time of the year'. Nowadays, however, it is only with great difficulty that a ship drawing six feet can be got over the bar, and it takes a month to warp a vessel of that size up the river.

Coringa is of some religious importance, since the neighbouring village of Masakapalli is one of the places at which pilgrims bathe when performing the *sapta-ságara-yátrá* or 'pilgrimage of the seven mouths,' already referred to. The river Coringa is said to have been brought to the sea by the sage Atri, and the bathing place is called the *Átréya-ságara-sangam*. It is also believed that the demon Máricha, who was sent by Rávana in the form of a golden deer to Ráma, when he and Síta were at Parnasála, was killed by Ráma at this place. Ráma is supposed to have founded the Siva temple of Korangésvarasvámi.

Gollapálaiyam (eight miles south-south-west of Cocanada, population 1,817) is of interest as the home of the cloth-painting described in Chapter VI. Some seventy households are also engaged in the stamping and dyeing of chintzes, and a little weaving of fair quality is carried on. There are some Jain remains in the neighbouring village of Ariyavattam.<sup>1</sup>

Injaram. A zamindari village near Yanam, fifteen miles south by west of Cocanada. Population 2,042. A factory, an offshoot of the settlement at Vizagapatam, was founded

<sup>1</sup> For others, see Chapter III, p. 39.

there by the East India Company in 1708 was soon afterwards abandoned but was re-established in 1722. It was captured by the French under Bussy in 1757—the garrison numbered only twenty men and no resistance was offered—but it was ceded by the Nizam to the English in 1759 after the battle of Condore. It continued as a mercantile establishment of the East India Company till 1829. Its two great qualifications as a factory were that it was situated near one of the principal mouths of the Gódvári and that very good cloth was made there. Indeed Captain Hamilton, who visited India at the beginning of the eighteenth century, stated that it produced the best and finest longcloth in all India. With the abolition of the Company's factory the prosperity of Injaram declined. It has now no sea-borne trade whatever. No traces, it is said, exist of the European settlement.

Injaram is the head-quarters of a small zamindari estate containing three villages and paying a peshkash of Rs. 2,832. It was part of the old Peddápúram zamindari and was acquired by sale by the present holders' family in 1845.

**Nilapalli.** An old sea-port near Yanam, on the eastern bank of the Coringa river where it joins the Gautami Gódvári. Its population is 3,936 and it contains a vernacular lower secondary school for girls. The Company established a factory here in 1751, but it was captured by Bussy in 1757. A quantity of good cloth was formerly manufactured in the neighbourhood, and a considerable sea-borne trade existed, but now the place is of little importance commercially and has no sea-borne trade at all. In it are the remains of several old bungalows once occupied by English merchants, and four English tombs ranging in date from 1807 to 1865.

Its hamlet of Georgepet, which was clearly so named by Englishmen, contains a large mill belonging to the Coringa Rice Mills Company, where about one hundred men are employed and which is in charge of two European superintendents. The rice is sent in boats to be shipped from Cocanada. The mill is said to have been started by a French engineer from Káraikkál in 1854. Before that time the buildings are said to have been used as an indigo factory.

Nilapalli is the only remaining village of the old Nilapalli proprietary mutta (created in 1802-03) which formerly contained nine other villages and paid a peshkash of Rs. 6,300. The peshkash is now only Rs. 480.

**Samalkot** (vernacular *Chámariakóta*) Seven miles north of Cocanada, and the junction between the branch line from

that place and the North-east line of the Madras Railway. It is connected by canal with both Rajahmundry and Cocanada. Its population was 16,015 in 1901. It contains a police-station, a small market, a travellers' bungalow and a fine private choultry near the railway-station. Its educational institutions comprise the Canadian Baptist Mission seminary,<sup>1</sup> a vernacular lower secondary school for girls and a Sanskrit school. The town is a union, and comprises the villages of Bhīmavaram and Jaggammagāripēta.

Samalkot is included in the Pithápuram estate, was the original residence of the family of sirdars who founded that property, was apparently the first capital of the zamindari, was deserted in favour of Pithapuram for a time, but became the capital once more in the eighteenth century. Its fort was the scene of some exciting by-play in the great drama enacted by the English, French and Muhammadans in 1759, and seems to have more than once changed hands. Further particulars will be found in the account of Pithápuram below. In the latter half of the eighteenth century the place was made a sanitarium for the British troops in the district. Barracks were built in 1786, and it was at that time 'the principal garrison of the English in the Circar of Rajahmundry'.<sup>2</sup> The fort was demolished in 1838 and the place was abandoned as a military station in 1868. Owing however to the Rampa disturbances of 1879, two companies under a British officer were afterwards stationed there, and they were only withdrawn in 1893. Samalkot is now of some commercial importance owing to the establishment within it, in 1899, of the large sugar-refinery and distillery which is described in Chapter VI. A large number of Dēvāngas in the town weave plain cotton cloths, and a few make cotton cloths with lace borders. A little chintz-stamping and dyeing, and manufacture of kas-kas tattis also goes on. A Government experimental agricultural farm<sup>3</sup> was started in the place in 1902 and has recently been made into a permanent institution.

Sarpavaram (snake town) lies  $4\frac{1}{4}$  miles north of Cocanada and contains 1,681 inhabitants. It is locally famous for its sanctity. The temple is known by the name of Nārada Kshétram after the rishi Narada, who is supposed to have

<sup>1</sup> See Chapter III, p. 41.

<sup>2</sup> Grant's *Political Survey of the Northern Circars* appended to the *Fifth Report of the Select Committee on the affairs of the East India Co.* 1812 (Madras reprint 1883), p. 215.

<sup>3</sup> See Chapter IV, p. 75.

founded it. This sage was turned into a woman by Vishnu and married a Pithápuram Rája who was killed in battle with all his children. Thereupon Vishnu pitied him and turned him back into a man. Both transformations were effected by bathing in tanks at Sarpavaram, the former in the Nárada Gundam, the latter in the Muktika Sarasu tank. To bathe in the Nárada Gundam is considered a holy act. The name of the town is locally said to be derived from the fact that it was in this place that, as the Mahábhárata relates, Parikshit the son of Arjuna was bitten by a snake and died. His son performed the *sarpa yágam* (serpent sacrifice) to effect the destruction of all those reptiles, but one snake was spared by Indra's mercy.

The temple is a plain building of no beauty. A late Rája of Pithápuram built its gópuram at a great cost. Eight inscriptions in it (Nos 452-59 of 1893) have been copied by the Government Epigraphist. The oldest of these, on a pillar in the mantapam in front of it, is in Tamil and is dated in the 46th year of Kulottunga Chóla Déva—apparently Kulottunga I (A D 1070-1118)—or 1116 A D. One, dated A D 1414, is a record of Véma Reddi, and several others of the early part of the thirteenth century are grants of a Vishnuvardhana Mahárája, who is probably the same person as the local chieftain Mallapa III.

**Tallarevu** Two miles south of Coringa on the east bank of the river of that name. This village, like so many on this river, appears to have once been an important trading centre. It is now only interesting as the scene of a small indigenous ship-building industry.

**Yanam** (French, Yanaon) is a small French Settlement which is entirely surrounded by British territory. It is situated about twelve miles from the mouth of the Gautami Gódavari, at the point where the Coringa river branches off from the main stream. The Settlement extends along the banks of these rivers for seven or eight miles, and its area is returned at 2,258 acres. Besides Yanam, it includes the four hamlets of Advipálem, Kánakalapeta, Mettakuru, and Kursammapéta. Its population in 1901 was 5,005 against 5,327 in 1891. The town contains a few handsome European buildings, including a fine church, and there is a spacious walled parade on the south side facing the Gódavari.

Yanam is a comparatively modern town, and was not in existence in 1706. The French established a factory there about 1750, and the place was formally ceded to them in 1752. It shared the vicissitudes of their other possessions on this

coast, and from 1793 onwards, save for a short period in 1802-03, was in the occupation of the English till the treaties of 1815 restored it to its former owners. It was then finally handed back in 1817. In 1839 the town was laid waste by a hurricane which was accompanied by an inundation of the sea.

Subject to the control of the Governor of the French Possessions at Pondicherry, Yanam is administered by an official called the *Administrateur* who is assisted by a local elective Council of six members. The *Administrateur* is the head of the magistracy and police and president of the criminal court. Local affairs are managed by a communal council, also elective, of twelve members. Two free schools, one for boys and the other for girls, having an attendance of 202 and 248 respectively, are maintained in the town. The area of cultivated land in the Settlement in 1903 was 664 *hectares* or about 1,000 acres. Land is held in absolute ownership subject to the payment of an assessment of Rs 37-8 per candy (about  $4\frac{1}{2}$  acres) for cultivated land, and Rs 5 for pasture land. Water is supplied free of cost from the British canal which passes through Yanam. Little trade is now carried on at the place, and in 1903 the exports were valued at only Rs 22,300 and the imports at Rs 53,625. The sea-borne trade is carried northwards down the Coringa river into the Cocanada bay, as the mouth of the Gautami Gódávati is much silted up.

The special arrangements connected with customs and salt which are necessitated by the existence of the Settlement are referred to in Chapter XII above.

## NAGARAM TALUK.

NAGARAM taluk consists of the small island of that name which lies in the south-west corner of the delta and is surrounded by the Vainatéyam and Vasíshta branches of the Gódávárí and by the sea on the east. It is sometimes known as the Tátipáka Síma ('country'), after the village of that name within it. It is called after the unimportant village of Nagaram, but its head-quarters is Rájavélu. Till October 1st 1904 it was part of the Narasapur taluk, and the usual statistics are not always available for it. Certain figures appear in the separate Appendix, however. It is now the charge of a temporary tahsildar. It is the smallest and the most densely peopled taluk in the district. It is particularly fertile and is irrigated entirely by means of the great Gannavaram aqueduct referred to on p. 86.

Nagaram contains an important centre of pilgrimage in the Vaishnavite temple at Antarvédi and several other places of religious interest. A fair amount of weaving is done in Jagannapéta, Mori, Sivakódu and Tátipáka, and the work of the first of these is well known. Tatipáka has a certain historical interest.

The whole of the taluk belongs to Government with the exception of Lankala Gannavaram village, which forms a part of the Palivela *thana* of the Pithapuram estate, and the whole inam village of Gudumulakhandrika. This originally belonged to the old Peddápúram zamindari, was purchased at a sale for arrears, and, after one more sale, was left by will to the late zamindar of Pithápuram.

**Antarvédi.** Lies in the south-west corner of the taluk at the mouth of the Vasíshta Gódávárí. Population 6,583. It is the last and the most important of the sacred bathing-places comprised in the *sapta-ságara-yátrá* already referred to, and has other distinct claims to sanctity which are widely recognized. The god of the place is Lakshminarasimha-svámí, an incarnation of Vishnu, who at the prayer of the sage Vasíshta and with the help of a local goddess killed another giant called Rakta Vilóchana. The local goddess' name was Asvarúdámba or Gurrálakka, a small stone image of her, mounted on a horse, is to be seen in the village. Lakshminarasimha-svámí was entreated by Vasíshta to remain in the locality, and he accordingly concealed himself in an ant-hill, where the existing image of him was found. This was originally enshrined

in a shed by a shepherd, who had miraculously discovered it by the extraordinary insight of one of his cows, and one of its earliest devotees was a Sri Vaishnavite pilgrim who spent his life worshipping it, and from whom the Sri Vaishnavites of Antarcvédi claim to be descended. The present temple, as is mentioned in an inscription within it, was built in 1823 by a pious Palli of Bendamurlanka.

A well-known festival occurs in the village in Mákha (February-March), and at this the marriage of the god is celebrated. It lasts about a week, and is the largest in the district, as many as 80,000 people sometimes attending it. The car is dragged round on the second day, and on the last the god is taken down to the sea-shore, where his bronze quoit (*chakram*) is laid on the head of each of the pilgrims, who afterwards bathe in the sea.

A curious feature of this festival is the importance accorded thereat to the Kóna Sima Drávidas of Péruru mentioned in the account of that place above. When the marriage of the god is performed they represent his bride's relations, and they are also allowed to go to considerable lengths in making fun of the Sri Vaishnavite Bráhmans of Antarcvédi, who are the leading religious party in the place and represent the god himself at the marriage. On the last day but one of the festival they put on Vaishnavite sect-marks and sing abusive songs about the Vaishnavites, who show no resentment. The reason for all this is said to be the fact that long ago the *chakram* of the god was lost in the sea, and that one of the Tamil Bráhmans of Péruru earned the everlasting gratitude of the people of Antarcvédi by getting it back by the use of powerful charms (*mantrams*). It is even believed that the car cannot be drawn without the help of one of these privileged persons. It is solemnly asserted that 'in the year Vijaya' (1893-94) the villagers could not move the car in spite of all their efforts, because no one from Péruru was pulling. Some men from there were sought out and prevailed upon to touch the ropes, and the car at once started, and nowadays they take care to have some one from Péruru to help pull. The temple is a handsome building with a number of gópurams, but it is not of any great size. It is endowed with some 800 acres of land and receives an annual tasdik allowance of about Rs. 3,000.

Antarcvédi is of no industrial importance. The painting done there is referred to in Chapter VI.

**Jagannapéta.** Four miles north-north-east of Rájavólu. Hamlet of Mogalikpódúru, the population of which is 2,524. The place is noted for its weaving, which, though now said to be

declining, still employs some 300 families of Dēvāṅgas. They weave white cotton turbans and cloths, ornamented with cotton or lace borders and sometimes with simple embroidery. They work with counts as fine as 150s, and their fabrics are noted for the closeness of the weaving.

**Kadaḥ** Three and a half miles east-south-east of Rājavolu. Population 3,687. Contains a small local fund market. The god of the place is named Kapōṭisvaradu and is said to have been first recognized by a certain hermit, who, with his wife, used to worship him in the form of a *kapōta* bird. One day the hermit was mistaken by a shikārī for a real bird and shot while at his prayers. He fell into the pool called the *Kapōta gundam* at this place, and his wife flung herself in after him. It is considered a holy act to bathe in this pool on Sundays.

The village is known as 'the place of the five K's' (*Kakdra panchakam*), from five names of local importance which begin with that letter, namely, those of the god, of the village itself and of three families (the Kādambri family of Niyōgi Brāhmans, the Kāsibhatlu family of Vaidiki Brahmins, and the Katika-reddi family of Kāpus) which are largely represented in the village.

**Nagaram** Five miles north-east of Rājavolu. Population 2,241, of whom about a quarter are Muhammadans. Contains a police-station and a small local fund market. It was presumably once of importance, as for at least the last 120 years it has given its name to the Nagaram island, but now, except that it does a certain amount of local trade, it possesses hardly any features of interest. It contains the remains of an old fort which is said to have been built by the Muhammadans.<sup>1</sup>

**Rajavolu** (commonly called Rázóle by Europeans) has been the head-quarters of the Nagaram taluk since it was split off from Narasapur in 1904. It contains 2,553 inhabitants, a police-station, a sub-registrar's office, a local fund dispensary (opened in 1881) and a local fund choultry.

**Sivakōdu** Two miles south-east of Rājavolu. Population 3,541. Contains a travellers' bungalow and an English lower secondary school for boys. The Siva temple, like that at Rāmésvaram still further south-east, is supposed to have been built by Rāma on his return from Ceylon in expiation of his sin of killing king Rāvana, who was a Brāhman. It is supposed to be the very last one he made for this purpose, and to have completed the crore (*kōṭi*) of temples the construction of which was needed to cleanse him thoroughly of his

<sup>1</sup> Sewall's *Lists of Antiquities*, I, 41.

sin The name Sivakódu is supposed to mean 'the crore of Siva' and to be derived from this fact

There are about 50 Dévargas in the village who weave plain cloths, using thread of counts as fine as 150s. A local carpenter carves wooden figures, bed-steads and door-frames well, and also makes musical instruments of fair quality

**Tatipaka** Three miles north-north east of Rájavólu. Population 2,838. A small local fund market is held there. In one of the streets is a Jain image, buried up to its neck, the head of which is more than life size. Several large wells in the neighbourhood are called 'Jain wells'. The place is a centre of trade and of the jaggery industry. Some 50 Devánga families weave plain cloths.

Tatipaka seems at one time to have been a place of some importance since the local name for the Nagaram island (Tatipaka Sima) is derived from it. It is referred to in the accounts of the Muhammadan invasion of 1562-64. It was then held by a powerful zamindar, Narasinga Rao, and was strongly fortified and protected by a deep moat. The Muhammadans were detained a month in front of the walls and were finally driven to raise the siege. The place was attacked next year when the rains were over, and was then captured.

---

## PEDDAPURAM TALUK

PEDDÁPURAM taluk lies in the north-east of the district south of the Yellavaram Agency and west of Pithapuram and Tuni. The northern part of it is very like the Agency in character, and is, in particular exceedingly malarious. The greater part of the taluk, as well as the Pithápuram country, is known to the natives as the Porlunádu. Very little of Peddapuram is irrigated. More than half the wet area is under the Yeluru river, and over 4,600 acres under the large Lingumparti tank. Eighty per cent of the soil is red ferruginous, eleven per cent black regar and only six per cent alluvial. The average rainfall is 36.80 inches a year. The comparative barrenness of the taluk results in many contrasts to the delta tracts: the incidence of the land revenue, for example is only Rs. 1-13-7 per head, the density of the population (331 per square mile) is unusually low for this district, education is more backward than in any other taluk on the plains, and only 5 per cent of the male population can read and write.

Of the few industries in the taluk, the most important is the manufacture of jaggery, which is exported in large quantities to the refinery at Samalkot.

The taluk was originally a part of the large zamindari of Peddapuram, the history of which is sketched below. It is now nearly all Government land. The small estates of Kirlampudi, Viravaram, Dontamuru and Ráyavaram, one village of the Pithápuram zamindari and the Jagammampeta estate are the only areas that are still zamindari land.

**Annávaram** Twenty-five miles north-east of Peddapuram. Population 605. Possesses a small choultry and a temple of some local fame. The latter contains an image of Satya Náráyanasvámi which was discovered on a hill near by as the result of a vision seen in a dream by a local Bráhmaṇ, and many people, especially those desirous of children, go on pilgrimages to it.

**Dhāramallápuram** Forty miles north by east of Peddapuram among the hills. Population 86. Contains the ruins of an old mud fort, oval in shape and half a mile in diameter, which is declared by local tradition to have been built by Bussy after his expedition against Bobbili.

**Jagammapéta** Eight miles north-west of Peddápúram, population 4,638 Chief village of a union which also comprises Kótturu, Rágampeta and Rámavaram Contains a police-station, two travellers' bungalows (one for natives and the other for Europeans), a small choultry, a small local fund market, and a lower secondary school for boys The sublimate of mercury made in it is referred to in Chapter VI One or two Kamsalas make brass vessels

Jagammapeta is the chief village of the zamindari of the same name, which consists of 28 villages and pays a peshkash of Rs 33,062 Along with the Dontamuru estate (one village, peshkash Rs 3,267) and the Rayavaram estate (two villages, peshkash Rs 1,998) this zamindari was purchased from the Peddapuram estate by the Rája of Pithápúram He gave them to a certain Rao Venkata Rao, and the present holder is the widow of the latter's grandson

**Kandrakota**, six miles north of Peddápúram, population 2,664, is celebrated for its festival to the village goddess Nukalamma, which lasts for a month and end with the last new-moon day before the Telugu New Year's Day in March or April Many pilgrims visit the place on this occasion and vows of many kinds are made to the goddess, generally, it is said, to secure alleviation from disease A buffalo is sacrificed, a wound being first made in its throat and the blood caught in a pot, and its head being then cut off

**Kattipudi** Seventeen and a half miles north-east of Peddapuram Population 1,470 Contains a police-station, a travellers' bungalow and a large choultry with an income of Rs 3,000 from land bequeathed to the taluk board, which is devoted to feeding travellers of all classes

**Kirlampúdi** Nine miles north-north-east of Peddápúram Population 4,316 Has a small market Is included in the Jagapatinagaram union Chief village of a small estate, consisting of ten villages paying a peshkash of Rs 23,186, which was purchased from the old Peddápúram zamindari at a sale for arrears It has changed hands since then and is now held in shares by two brothers One share has been sold to the Maharája of Bobbili

**Peddápúram**, the head-quarters of the taluk, lies three miles from Samalkot railway-station and contains a population of 12,609 In it are the offices of a Deputy Collector, a tahsildar, a district munsif, a sub-registrar, and a stationary sub-magistrate, and also a local fund dispensary (established 1881), a fair-sized market, a police-station and a fine taluk board choultry where Bráhmans and Sudras are fed. This

last is endowed with an income of Rs 3,400 from land, and was bequeathed to the taluk board. The town also contains a high school belonging to the American mission and a vernacular lower secondary school for girls

It was for nearly three centuries the capital of a great zamindari estate which seems at one time to have extended from north of Tótapalli to Nagaram island. About 1785 it 'comprised nearly one-half of the whole Circar of Rajahmundry, both in extent and value, and contained 585 villages'<sup>1</sup>

The old zamindars of Peddápúram are said to be descended from Vachchavaya Musali, the perfidious minister of Vidiadri, the last Gajapati ruler of Rajahmundry, whose treachery is said to have been one of the factors which facilitated the Muhammadan conquest in 1571. The line of descent was unbroken till 1734, when the estate was apparently in the hands of a woman, the zamindari Vachchavaya Ragamma who was defeated near Peddápúram by the Muhammadans for joining in the rebellion of the chiefs of Ellore, Mogalturru and Pithápúram.<sup>2</sup> The Muhammadan general then enticed the sons of Ragamma into his camp and tortured them to death 'by drizzling on them hot-boiled oil with brushes'.<sup>3</sup> Ragamma burnt herself alive when she heard the news. 'Challa Peddy, a faithful servant, made haste to the palace and took permission from the Rane to set the palace on fire to prevent the ladies being maltreated by the barbarous soldiers of the Sirlushkar'.<sup>4</sup> Her grandson was sent for safety to Vizianagram. In 1749 the family was re-established by the amildar, Nimat Ali, who for a bribe of Rs 90,000 appointed one Ráyappa Rázu, a grandson of Rágamma, as zamindar. Rayappa Rázu, like most of the other zamindars, hated the Vizianagram Raja and so opposed the English in their advance in 1758. He was either killed at Condore,<sup>5</sup> or was deposed by Ananda Rázu of Vizianagram in the following year, and his son Timma Rázu, then a boy only seven years old succeeded to the estate. Timma Rázu ruled till 1797 and was followed by Raya Jagapati Rázu with whom the permanent settlement was made. He died in 1804 without issue, and left the estate to a minor child adopted by him.<sup>6</sup>

<sup>1</sup> Grant's *Political Survey of the Northern Circars* already several times cited

<sup>2</sup> See p. 235

<sup>3</sup> MS history of Pithápúram (Cocanada 1881), p. 30

<sup>4</sup> *Ibid*

<sup>5</sup> Grant's *Political Survey*

<sup>6</sup> Selections from the Records of the Códavari district (Cocanada, 1891), Mr Hodgson's report, dated 23rd November 1805, para. 3

The estate was eventually sold for arrears of revenue in 1847. Much of it is now Government property, but parts of it went to make up nine small estates which are still in existence. These are Kottam, Vīravaram, Kīrlampudi, Dontamuru, Jagammapéta, Rāyavaram, Gollaprólu, Palivela and Injaram. The ancient line of zamindars still maintain something of their former position in the Kottam zamindari, which was split off from that of Peddápúram in 1810.

Peddapuram town is an important centre of the jaggery trade and sends large quantities of that commodity to the factory at Samalkot. A little silk-weaving is also carried on there, some 200 households are employed in weaving cotton cloths with lace borders, a few families stamp and dye cotton cloths, a fair amount of metal-work is done, and a little good shoe-making. The town has a bad name for elephantiasis.

The ditch and parts of the walls of the old fort are still to be seen. It was built of stone, was oval in shape and about three-quarters of a mile across. The land inside the walls is now under cultivation.

A hill in the neighbourhood, called the *Pāṇḍavulametta* ('the Pandavas' hill'), contains a cave which is supposed to be the mouth of an underground passage leading to Rajahmundry. It is popularly supposed that the Pandavas used to haunt this hillock and go to Rajahmundry through this passage.

**Prattipadu** Eleven miles north-north-east of Peddapuram. Population 2,100. Contains the offices of a sub-registrar and a deputy tahsildar, a police-station and a native travellers' bungalow. It is the chief village of the Jagapatinagaram union which comprises also Kīrlampudi, Simhādrīpuram, Jagapatinagaram, Chīllangi, Rāmakrīshnāpuram and Vélanka, and the total population of which amounts to 11,329. It enjoys considerable local celebrity owing to its possession of an idol of Rāmalīngasvami, which was recently found on a neighbouring hill by a Kamsala who had been told in a dream that it was there. A cobra is said to have been shading the idol with its hood. About two miles from Prattipadu on the road to Jagammapéta are two idols under a cluster of trees which are known in the neighbourhood as Pathalamma (the foot goddess). These are visited by large numbers of pilgrims who in satisfaction of vows sacrifice fowls and animals to the goddess and hang up the victims' heads in front of her. A number of stories are told about the malignant powers of this goddess. A Local Fund Engineer (name not specified) who ventured to cut down one of the trees near by some twenty years ago was thrown from his horse in consequence, another

man who committed the same offence was at once seized with fever and died within the week, and some ryots of Yerravaram who removed one of the idols to their village were struck with blindness

**Ragampeta** Eight miles north-west of Peddapuram, population 865 Is included in the Jagammapeta union Some ten Linga Baliyas make bangles and 'glass' bottles here, an industry not common in this district Brass vessels are made by a few Kamsalas

**Rangampeta** Ten miles west of Peddapuram, population 2,017 Contains a large choultry called the Nallacheruvu choultry (from the tank on the bank of which it is situated) which has an income of Rs 5,500 from land, and in which travellers of all classes are fed. There is a travellers' bungalow close to it

**Talluru** Eleven miles north-west of Peddapuram, population 1,768 Is called Taidoor in old maps The present Vaishnavite temple in the village is said to have been originally built above a rock-cut cave, by a saint called Bhárgava as a shrine to Siva The local chief, a Dudéku named Sitab Khán, who was a Saivite, was afterwards converted to the Vaishnavite faith by the famous Ramanujachári, and in consequence overthrew the Saivite lingams (which now lie buried in a mound known as the *lingala dibba*) and turned the temple into a Vaishnava place of worship

**Totapalli**, eighteen miles north east of Peddapuram, population 94 was the former capital of one of the three ancient mansabdaris of the Godavari district The original holder of this was a mokhásadar under the zamindar of Peddapuram, who was bound to pay his suzerain a quit-rent of 1,000 pagodas a year and attend on him when required with a body of 700 peons It was this military service which caused him to be denominated a mansabdar<sup>1</sup>

His estate comprised 100 villages of which 37 were held by inferior mokhásadars<sup>2</sup> Mr Grant (writing about 1785) speaks of the property as a 'region of tigers,' and mentions that in 1771, at the instigation of the Peddapuram zamindar, 'this little territory, with the sacrifice of almost the whole detachment to the unhealthiness of the climate, was reduced by the English to pay a future tribute to the zamindar'<sup>3</sup> As this quit rent was not punctually paid, the Peddapuram zamindar in later times resumed certain of the Tótapalli villages The

<sup>2</sup> G O No 2425 Judicial, dated 23rd November 1881

<sup>3</sup> Political Survey of the Northern Circars, 214.

7 quit-rent of 1,000 pagodas on the property was one of the assets of the Peddapuram zamindari on which the peshkash payable to the Company was assessed at the permanent settlement. That settlement did not recognize the mansabdar save as a subordinate of the Peddapuram zamindar, nor deal with him direct. In 1847 the Peddapuram zamindari was sold for arrears of peshkash and bought in on behalf of Government, and from that date the feudal service of the mansabdar was due to Government and was occasionally demanded. In 1859 a money payment of Rs 6,500 per annum, being one-fourth of the assumed rental of the villages, was substituted for this service. The estate thus became an unenfranchised inam from which no service was required. Subsequently the mansabdar ran into debt and alienated a number of his villages. Government accordingly decided in 1881<sup>1</sup> to assess the whole estate fully and take it under their own management, and, while remitting the demand fixed in substitution of the former military service, to pay the mansabdar annually the difference between the estimated cost of that service and the estimated value of the estate, or Rs 19,500. The ruins of the mansabdar's fort still exist in Tótapalli. It was built of mud and stone, was oval in shape, and covered some 200 acres. The land inside it is now under cultivation.

**Viravaram** Eight miles north of Peddapuram. The chief village of a small estate which previously formed part of the Peddapuram zamindari and was purchased at a sale for arrears by a certain Rao Bhanayamma, from whom the present holder has inherited it. It contains eleven villages and pays a peshkash of Rs 26,759.

**Yelésavaram** Fifteen miles north of Peddapuram on the border of the Yellavaram division. Population 5,180. It is the chief village of a union which also includes Appanapálaiyam, Ráyavaram, Lingamparti and Nárayanapatnam, and the population of which is 8,531. The village contains a local fund dispensary (established 1882), a travellers' bungalow and a local fund market. This last is much used by the hill tribes, and the village has been appropriately called 'the gate of the Agency'. It is the scene of a large festival in honour of the village goddess Nukálamma in Vaisaka (May-June), which is also largely attended by the agency people.

<sup>1</sup> G O No 559, Judicial, dated 19th March 1881.

## PITHÁPURAM DIVISION

THE Pithápuram division lies along the coast, north of the Gódvári delta, and, except Nagaram, is the smallest in the district. Most of it is included in the Pithápuram zamindari. Though it adjoins the delta, where the rainfall is heavy, it receives only 34.46 inches annually on an average the lowest figure in the district. Part of it however, benefits from the excellent irrigation provided by the Yeleru river. The head-quarter town is of much historical and archæological interest. Good weaving is done at Múlapeta, Uppada and Kottapalli, and excellent bronze-work at Pithapuram. Chandurti was the scene of the great battle of 'Condore'.

**Chandurti.** Seven miles north by east of Pithápuram. Population 1,087. It is called Condore by Orme, and has given this name to the decisive battle which took place near it on the ninth of December 1758 which resulted in the wresting of the sovereignty of the Northern Circars from the French by the English. The battle is described in detail by Orme,<sup>1</sup> and in somewhat different terms by Cambridge<sup>2</sup> and Malleon.<sup>3</sup> A very precise local tradition survives in the village to this day as to the locality in which it was fought, and old swords, bullets, cannon-balls, remains of pewter vessels, and elephants' bones have been found in quantities in the neighbourhood by the villagers while cultivating their fields. The account given by Orme is more detailed than the others and agrees more closely with the local tradition.

When the English under Colonel Forde entered the Pithápuram division they found the French under M. Conflans encamped at Gollaprólu,<sup>4</sup> some four miles north-east of Pithápuram on the main road. This was on December 3rd. The French force consisted of 500 Europeans, 500 native cavalry, 6,000 sepoys and a great number of local levies.<sup>5</sup>

<sup>1</sup> Orme (Madras 1861), II, 378 ff.

<sup>2</sup> *The War in India* (London, 1761), 204 ff.

<sup>3</sup> *Decisive battles of India*, 80-87.

<sup>4</sup> Cambridge says 'near Tallapool' (i.e. Tatiparti) and local tradition places the French camp at the now deserted village of Vodulapenta. The latter may refer to the temporary occupation of that village by the French on the morning of the battle.

<sup>5</sup> Orme says 'a great number of the troops of the country of which 500 were horse and 6,000 sepoys,' Cambridge says '8 000 sepoys and a great many of the country powers.'

- v They had had 36 pieces of cannon and some mortars, in fact, 'many more pieces of cannon than they could use at once.' The English force consisted of 470 Europeans and 1,900 sepoy, while their ally, the Raja of Vizianagram, had with him '500 paltry horse and 5,000 foot, some with awkward firearms, the rest with pikes and bows,' as well as a small force of 40 Europeans in charge of four guns, who, in the event, proved of more assistance than all the rest put together.

The French did not move from Gollaprólu, and on the sixth the English occupied Chebrólu, which was also on the main road and lay about three miles north of Gollaprólu. For the next three days the two armies remained in their respective camps, but on the early morning of the tenth they both made a movement. Forde desiring to draw the enemy from their camp to a general action, and to lead them to ground where their cavalry would not be of much assistance to them, marched off at 4 A.M., followed at some distance by the Vizianagram forces, who were not ready to start at the proper time and at about eight in the morning took possession of Chandurti, which lay some two miles north-west of Chebrólu and well off the road. Meanwhile Confians had been induced by an intelligent deserter, who had told him that the English force was raw and undisciplined and who had noticed a spot from which their camp could be commanded, to send off six guns the same night to cannonade Chebrólu, and he followed with the rest of his army and artillery to support them. The advance detachment of the French army came across the Vizianagram troops as they were leaving Chebrólu about daybreak, and fired upon them for some little time, but apparently without doing much harm. When Confians came up he imagined that the English intended to take possession of the now deserted village of Vodulapenta, which lay midway between Gollaprólu and Chandurti and some two miles nearly due west of Chebrólu, and would have afforded them a strong advanced post in any attack upon Gollaprólu. He at once marched across the plain to prevent this, and had no difficulty in doing it, as Forde remained at Chandurti, two miles north of Vodulapenta, resolved 'to regulate his future movements by the enemy's.' Confians imputed this inactivity to fear, and supposing that, with the advanced post in the enemy's hands, the English would now return to their camp at Chebrólu, he hurried forward to cut them off. Forde, nothing loth, advanced to meet him about nine o'clock, and the two armies came face to face about a mile south-south-west of Chandurti.

The spot which tradition identifies as the scene of the battle which followed is locally known as Angleyulapádu, 'the place of the English,' and is at present covered by a small tope of babul trees. It is a little to the east and north of a small pool which lies about equidistant from Chandurti and Vannipudi, is due east of the latter, and about one and a half miles north north-east of Tátuparti.<sup>1</sup>

Orme gives the following account of the battle which ensued —

'The French Battalion of Europeans was in the centre of the line, with 13 field pieces, divided on their flanks, the horse, 500, were on the left of the battalion, 3,000 sepoy formed the right wing, and the same number the left, and with each wing were five or six pieces of cumbrous cannon. The English army drew up with their Europeans in the centre, the six field pieces divided on their flanks, the 1,800 sepoy were likewise equally divided on the wings. Colonel Forde placed no reliance on the Rajah's infantry or horse, and ordered them to form aloof, and extend on each flank of the sepoy all this rabble kept behind, but the renegade Europeans under Bristol, who managed the four field-pieces belonging to the Rajah, advanced, and formed with the division of artillery on the left of the English battalion. The line having had time, were in exact order, and had advanced a mile in front of the village of Condore [Chandurti] during which, the enemy cannonaded hotly from all their guns. At length the impetuosity of the enemy's approach, who came on, out-marching their cannon, obliged the English line to halt for action, and it chanced that the whole of their battalion stopped near and opposite to a field of Indian corn, which was grown so tall that it entirely intercepted them from the enemy, but the sepoy on the wings were free in the plain on each hand. For what reason is not known, Colonel Forde had ordered his sepoy to furl their colours, which, besides the principal flag, are several small banners to a company, and to let them lay on the ground during the action.

The sepoy and horse of the enemy's wings greatly outstretched the wings of the English line, and came on each in a curve to gain their flanks, the French battalion in the centre, instead of advancing parallel to where by the wings they might judge the centre of the English line would be, inclined obliquely to the right, which brought them beyond the field of Indian corn, opposite to the English sepoy on the left wing, whom from their red jackets,<sup>2</sup> and the want of their usual banners, they from the first approach mistook for the English battalion, respecting them as such, they halted to dress their ranks

<sup>1</sup> Mr B McCormack, Engineer of the Pithápuram estate, has kindly given much assistance in locating the site.

<sup>2</sup> They were from Bengal and wore red, the Madras sepoy's tunics were usually white.

before they engaged, and then began to fire in platoons advancing, but at the distance of 200 yards. Nevertheless, this was sufficient, for the sepoys, seeing themselves attacked without cover by Europeans in front, and the horse and multitude of the enemy's sepoys gaining their rear, or coming down on their flank, scarcely preserved courage to give their fire, hurried, scattered, and without command, and then immediately broke and ran away to shelter themselves in the village of Chambole (Chebrólu), and were followed by the nearest of the enemy's horse. This success was greater than even the confidence of the enemy expected, and several platoons of the French battalion were setting off to pursue them likewise, when they saw a line of men with shouldered arms marching fast and firm from behind the field of Indian corn across their way, to occupy the ground which the sepoys had abandoned.

Colonel Forde had been with the sepoys before their flight, encouraging them to resolution, but saw, by the usual symptoms of trepidation, that they would not stand the shock, which prepared him to order the judicious movement which the officers were now performing with so much steadiness and spirit. Captain Adnet, commanding on the left, led the line, and as soon as the last files were got clear of the corn the word was given, when the whole halted, and faced at once in full front of the enemy. This motion was quickly executed, for the foremost man had not more than 300 yards to march, and the field pieces were left behind. During this short interval, the French battalion were endeavouring with much bustle to get into order again, for some of their platoons had advanced a considerable distance before others, and thus the fire of the English line commenced before the enemy's was ready, it was given in divisions, that is, the whole battalion divided into five, and began from Captain Adnet's on the left, which was within pistol shot, and brought down half the enemy's grenadiers, the fire ran on, and before the time came for Adnet's division to repeat theirs, the whole of the enemy's line were in confusion, and went about running fast to regain their guns, which they had left half a mile behind them on the plain.

The ardour of the English battalion to pursue was so great, that Colonel Forde judged it best to indulge it in the instant, although not certain of the success of the sepoys on the right, but concluding that the enemy's sepoys who were to attack them, would not continue long, if they saw their Europeans completely routed. The order was given for the battalion to march on in following divisions, the left leading. Nothing could repress their eagerness. All marched too fast to keep their rank, excepting the fourth division commanded by Captain Yorke, who to have a reserve for the whole battalion, if broken, as the enemy had been, by their own impetuosity, obliged his men to advance in strict order. The French battalion rallied at their guns, which were 13 in number, spread in different brigades, or sets, as

they chanced to stand when left by the troops advancing to the action. This artillery began to fire as soon as the ground was clear of their own troops, and killed some men, which only quickened the approach of the divisions to close in with the guns, of which several fired when the first division was within pistol shot, and Adnet fell mortally wounded, but his men rushing on drove the enemy from the guns they attacked, and the other divisions following with the same spirit, obliged them to abandon all the others.

The day, if not completely victorious, was at least secured from reverse by the possession of all the enemy's field artillery fit for quick firing, but their camp [at Gollaprolu], to which they were retiring, still remained to be attacked, and Colonel Forde halted until joined by his sepoy, and, if they would come, by the Rajah's troops.

The sepoy and horse of the enemy's right wing were in their turn panick struck by the fire of the English battalion routing their own, and all turned to gain the rear of the guns, keeping aloof to the left of the English divisions, and then went off again with the French battalion to the camp. Their left wing of sepoy behaved better, advancing to the use of musketry against the English sepoy of the left, with whom the battalion, when filing off to oppose the French, left the three field pieces of their right, and the sepoy, encouraged by this assistance, the ardour of the Europeans marching off, and the spirit of their own commander Captain Knox, maintained their ground, facing and firing in various directions behind the banks of the rice fields in which they had drawn up. The enemy's wing nevertheless continued the distant fire, until they saw their battalion of Europeans quitting their guns, and the sepoy and horse of the right retreating with them to the camp, when they went off likewise, stretching round to the left of the English battalion halting at the guns, and keeping out of their reach. Captain Knox then advanced to join the battalion with his own sepoy, and the six field-pieces, and had collected most of the fugitives of the other wing. Messages had been continually sent to the Raja's horse to advance, but they could not be prevailed upon to quit the shelter of a large tank,<sup>1</sup> at this time dry, in which they, his foot, and himself in the midst of them, had remained cowering from the beginning of the action.

As soon as the sepoy joined, and all the necessary dispositions were made, which took an hour, Colonel Forde advanced to attack the enemy's camp, but, not to retard the march, left the field pieces to follow. A deep hollow way passed along the skirt of the camp, behind which appeared a considerable number of Europeans regularly drawn up, as if to defend the passage of the hollow way, and several shot were fired from heavy cannon planted to defend the approach. Just as the English troops came near, and the first division of the Europeans stepped out to give their fire, the field pieces were arrived

<sup>1</sup> The Chandurti tank

within shot, on which all the enemy went to the right about, abandoned their camp, and retreated, seemingly every man as he listed, in the utmost confusion, but the English battalion crossing after them, many threw down their arms, and surrendered themselves prisoners. Mr Conflans had previously sent away four of the smallest field-pieces, and the money of the military chest, laden for expedition on two camels. The spoil of the field and camp was 30 pieces of cannon, most of which were brass, 30 tumbrils, and other carriages laden with ammunition, seven mortars from thirteen to eight inches, with a large provision of shells, 1,000 draught bullocks and all the tents of the French battalion. Three of their officers were killed in the field, and three died of their wounds the same evening, 70 of their rank and file were likewise killed, or mortally wounded. Six officers and 50 rank and file were taken prisoners, and the same number of wounded were supposed to have escaped. Of the English battalion, Captain Adnet and 15 rank and file were killed, Mr Macguire, the paymaster, and Mr Johnstone, the commissary, who joined the grenadiers, two officers, and 20 of the rank and file were wounded, the sepoys had 100 killed and more wounded. No victory could be more complete, Mr Conflans, the commander of the French army, changing horses, arrived on the full gallop at Rajahmundrum before midnight, although the distance is 40 miles from the field on which the battle was lost, the troops took various routes, but most of them towards Rajahmundrum.

**Kottapalli** Five miles east-south-east of Pithápura. Population 1,203. Good muslins are woven here by 200 households of Pattu Sâles. The work is referred to in Chapter VI.

**Mûlapêta** Seven miles east of Pithápura. Population 2,002. About 100 households of Pattu Sâles weave good cotton cloths in the village. The Mondî Jaganna temple there is widely known. There are two gods and a goddess in the temple, namely Bâla Rama, Jagannâtha, and his sister Subadra. All the images are of wood and are without hands or feet and are therefore called *mondi*, or 'crippled'. Whence the name of the temple. Popular tradition says the images were washed ashore in the village. It is said that the idols in the great Jagannâtha temple at Pûrî in Orissa are changed once a year, the old ones being thrown into the sea, and that these are a set of the old ones from that place. In Phâlguna (March-April) a five-days' festival takes place at the temple and the pilgrims bathe in the sea on the newmoon day. It is declared that married women of the lower classes who are desirous of children are permitted, without discredit attaching to them, to indulge in promiscuous intercourse at this feast, and respectable people consequently resent being asked whether they attended it. A curious feature of the worship is

that suppliants do not clasp their hands before the deities in the conventional Hindu form of reverence, but salaam to them as in the Muhammadan fashion of greeting. Nor do they address the usual praises to them, but actually insult them with the most vulgar abuse. No reasons are forthcoming for these customs.

**Pithápuram** A union of 13,220 inhabitants. The headquarters of the great Pithapuram zamindari, of a deputy tahsildar and of a sub-registrar. It contains a police-station, a large choultry maintained by the Rája, another kept up from local funds, a local fund hospital (founded 1879), an upper secondary school for boys, an English lower secondary school for boys, a Government lower secondary school for girls and a large cattle market. The Rája owns a bungalow near the station which is generally placed at the disposal of travellers. Close by are his experimental farm and veterinary dispensary.

Pithápuram is mentioned as a sovereign city in very early times. In the Allahabad pillar inscription of the Gupta king Samudragupta, which belongs to the middle of the fourth century A.D., the chieftain Mahendra of Pistápuram is mentioned along with the kings of Conjeeveram and Vengi. He was almost undoubtedly a Pallava chief and a semi-independent feudatory of the Pallava king Vishnugopa of Conjeeveram. Again 'the strong fortress of Pistapuram' is one of the places mentioned in the Aihole inscription of the Eastern Chalukya emperor Pulakésin II as having been subdued by him when he conquered the Vengi country. But from this period onwards a wide gap occurs in the history of the place. Inscriptions ranging from 1186 to 1391 A.D. and belonging to the Vélanándú chiefs, the Kónas, Mallapa's Eastern Chálukya line, and Reddi kings are found in it, but they throw no light on its history.

In comparatively modern times Pithápuram reappears as the head-quarters of an important zamindari. Mr Grant, in his *Political Survey of the Northern Circars* already quoted states that the ancestors of the Rája of this estate were established as renters of part of it as early as 1571, but that the family was involved in the general proscription of Indian landholders under the rule of Rustum Khan until in 1749 one of its members obtained a sanad for the zamindari from the amildar Nimat Ali.

A detailed history of the estate has recently been published at Cocanada by order of the Rája. Up to the end of the eighteenth century, this consists entirely of a translation of one of the Mackenzie MSS. The dates and names (especially the former) in this are evidently confused, but it may be relied on

- v where it refers to events in the latter half of the eighteenth century Further materials for a historical sketch of the estate are provided by the appointments and title-deeds given to the family by successive Muhammadan rulers which are still preserved in its archives, and by an old genealogical tree kept there
- e The family is of the Velama stock and its ordinary titles (like those of the Kalahasti zamindars) are Rao or Ráya-Nimgár It claims descent from one Anupótama Náyudu, about whom some remarkable stories are told. His existence is proved by orders of the Bahmani kings—one of Ala-ud dín (1435-58) dated 1454, 'pardoning him for his misbehaviour' and granting him and his brother Mádhava certain lands, and the other by the son of Muhammad Shah II (1463-82) dated 1464-65 and confirming or modifying the former grant—but these do not connect him with Pithápura The grants confer villages in the Nizam's Dominions, and the former directs him to come to the court of the Sultan The 'misbehaviour' perhaps consisted of the exploits (mentioned in the MS history) of his son who collected a large army and conquered forts in the west which were afterwards held by the family as a jaghír The names of two of these forts are given in the MS as Kailása and Metukur, and a Metukur is mentioned in the grant Anupótama's brother, Mádhava Náyudu, is said in the MS to have founded the family of Venkatagiri in Nellore The family were afterwards ousted from their jaghír by 'some Delhi sirdars', but one of them, Ranga Rao (of the third generation after Anupótama Náyudu), won back Metukur and Kailása by force of arms and his son and grandson ruled them more or less independently The sons of the latter were ousted again and served the king of Golconda as sirdars This must have been about the end of the sixteenth century

It is from Mádhava Rao, one of these sirdars, that the Pithápura family is descended. His sons 'lived for a long time at Samalkot,' and one of them, Tenugu Rao, was appointed Sirdar of the Rajahmundry Circar at the head of 4,000 troops with Anaparti (in Rámachandrapuram taluk) as a jaghír' He is said to have been appointed by king Abu Hassan of Golconda (1672-88), who was undoubtedly well disposed to his family He had seven sons. One of them, Jaga Rao, was made a sirdar over 350 men and the letter of

<sup>1</sup> The Pithápura MS professes to quote an inscription from Anaparti confirming this appointment, and dated 1598 But this date must be too early, and the list of Muhammadan rulers in the Rajahmundry MS referred to below does not support the appointment,

appointment, dated 1676-77, is still kept at Pithapuram. Both the MS history and the genealogical tree agree in saying that the nucleus of the present zamindari of Pithapuram was given to another son named Rámachandra Rao, the former ascribes the gift to king Abu Hassan, but the latter gives the date as 1647. The sanad then granted is not forthcoming, but the MS gives what purports to be a copy of it. According to this the grant included the 'pergunnas' of Cocanada, Selapáka (7 miles south of Cocanada) and Porlunadu (i.e. apparently, Pithapuram) <sup>1</sup> Samalkot and two other villages were also given as mokhasa.

The MS goes on to describe the fortunes of Tenugu Rao's children in some detail. Two more of his sons, Krishna Rao and Rangasayi Rao, were intimates of king Abu Hassan, being particularly good chess-players. The latter killed himself in the presence of the king rather than survive the insults which that ruler, being out of humour one day heaped upon him.

Various descendants of the seven sons of Tenugu Rao held the estate for some years. One of them, Venkata Krishna Raya-Nimgár, at length obtained an exemption from the payment of peshkash and 'ruled over the estate as if it were independent.' Certain zamindars of the country having failed to pay their revenues, an expedition was sent by the Muhammadans under Rustum Khán <sup>2</sup> the subordinate of Anwar-ud-din, about 1733 to suppress them. The zamindars of Mogalturru and Ellore were defeated at Ellore and called in the help of Venkata Krishna Raya-Nimgar and the zamindarni of Peddapuram. The united forces of the zamindars fought the Muhammadans twice near Peddapuram, but were defeated and driven into exile. The Raja of Pithapuram 'lived for some time among the hills of Tótapalli on predatory excursions.' His cousin Bachchanna was captured with the remnants of the army by Rustum Khan and he and his followers were beheaded at Pithapuram.

Venkata Krishna Ráya himself is said in the MS to have died of jungle fever in Totapalli. But this is apparently wrong. The genealogical tree makes him rule till 1759, and his existence in 1754-55 is proved by nine Muhammadan

<sup>1</sup> Porlunadu is nowadays used to designate those parts of the Cocanada, Peddapuram and Pithapuram country which are watered by the Yeluru. The word is locally explained to mean 'the land of floods from porlu', 'to overflow.'

<sup>2</sup> Called in the MS Haji Hussam but evidently identical with Rustum Khán. The Rajahmundry MS represents him as Nawab of Rajahmundry from 1730 to 1737, and Mr Grant (p. 208) gives the date of the defeat of the Mogalturru zamindar as 1733.

grants to him, ranging from 1749-50 to 1754-55, which are still kept at Pithápuram<sup>1</sup> His estates and jaghirs were apparently regranted to him in the first of these years by Nimat Ali, who was Nawab of Rajahmundry from 1749-50 to 1751-52 The gap between 1734, when he was defeated by the Musalmans, and 1749, when he was restored, is hard to fill Anwar-ud-dín had quieted the country, and the people were 'in enjoyment of peace of mind and freedom from predatory incursions' Rustum Khan had been killed by his own son, Nur-ud-dín, and the latter was beheaded by Anwar-ud-dín But whether Venkata Krishna Ráya was allowed to return to his estate before 1749 and, if not, who ruled the property in the interim, is not clear

The authorities do not say what happened to the estate while the French held the Northern Circars, but when the Vizianagram Raja induced the English to invade the country in 1758-59, the Pithápuram zamindar, like the other chiefs of this district, suspected that he wished to extend his dominions at their expense, and accordingly opposed the invasion He apparently took no part in the battle of Condore, but hearing that the English were advancing against Samalkot with the Vizianagram Raja he obtained the help of the Dutch of Cocanada to resist them The MS says that the Samalkot fort held out for three months, but then submitted Very shortly afterwards, however, the French landed some troops at Cocanada and these were received into the fort at Samalkot, and were joined there by Jagapati Rázu, a relative and enemy of the Vizianagram Raja This coalition fought an action at Undur with the Vizianagram forces, but was defeated Samalkot was re-taken by the English and the French were driven to Cocanada All this must have taken place in 1759 The Raja of Pithápuram took refuge in Rághavapuram, but, on the death of the Vizianagram Rája soon afterwards of small-pox, he returned to Pithápuram

Meanwhile the Nizam had again become possessed of the district, and about 1761 the zamindar was re-established in his property

Who held the property during the next few years is not clear, and there seems to have been some fighting over the successions In 1765 the then Rája, Kumara Mahápati, died, and his uncle Niládrí succeeded He seems to have been a man of character and to have taken a strong line in the disturbances of the preceding years

<sup>1</sup> Four of these bear the seal of the Mughal emperor Ahmad Shah (1748-54) and one of Alamgr II (1754-59)

The next zamindar of any interest is Kumara Venkata Mahipati Rao<sup>1</sup> (1786-93), of whom we are told that he 'did away with the peshkash and ruled over the estate as if he were an independent ruler without any disturbance and in the enjoyment of the greatest delights' This was too much for the 'Nawáb of Masulipatam' (the Chief of the English Council there) who summoned the zamindar to appear before him. The zamindar started for Masulipatam, but on his way he halted at Nallacheruvu and uttered the following native soliloquy 'It is not proper to proceed any further, for if the Nawáb were to question me why I did not remit the peshkash and I could not give him satisfactory answer, then it would be very difficult to say what steps the Nawáb might take' So he retired to the hills by way of Rampa where, 'the climate of the place being unsuited' to him, he was attacked by jungle fever and 'died prematurely there'

The story is confirmed by the general report of the Board of Revenue of that day. The Board recommended that the late zamindar's young cousin, Venkata Niladri should succeed him, and it was with this man that the permanent settlement was made in 1803. From his death, which occurred in 1828, till 1841 the estate was under the Court of Wards, and it was again under management from 1850 till 1861 when it was handed over to the then owner Venkata Mahipati Gangadhara Ráma Rao with a balance of four lakhs. This zamindar died in 1890, and, with a brief interval, the estate continued under the Court of Wards until October 1906, when it was handed over to its present proprietor.

The estate is a remarkably fine one. In the early years of British administration it was no doubt overshadowed by the more important zamindari of Peddápúram, but while the latter has ceased to exist Pithapuram has greatly extended. Not only does it now comprise nearly the whole of the Pithapuram division and the Cocanada taluk, but it also owns fourteen villages in Amalapuram, twelve in Tuni, nine in Rajahmundry, eight in Ramachandrapuram and four in Chódavaram, as well as others in North Arcot and other districts. Its total area is 383 square miles and its income in 1903-04 was Rs 9,14,000 and the peshkash Rs 2,44,000.

For purposes of administration the estate is divided into six *thanas*, each under a *thánadár*. The cultivators have no admitted occupancy right in their holdings, though they have shown a tendency to claim this, and until recently what

<sup>1</sup> This is the Mahipati mentioned by the Committee of Circuit, 1787

v is known as the *vantavādrāḍi* system of land tenure has been enforced by the estate. This is in effect, the joint-rent system in vogue in ryotwari lands prior to 1866 and described in Chapter XI. It included the 'challenging' there referred to. This undesirable method was practically abandoned under the Court of Wards. Rentals were fixed, whenever complaints were made about them, by holding a kind of public auction and giving the land to the man who offered the highest figure. When once thus settled, they were not altered until the holding changed hands by succession or otherwise, and the successful bidder was not interfered with in his possession. The estate has now been surveyed, and it may be hoped that the Rāja will introduce a regular settlement on the basis of the survey.

The town of Pithapuram is one of the least attractive places imaginable. The streets are narrow, winding, uneven and dusty, and the houses are poor in appearance. The Rāja's residence is in striking contrast, being an imposing building of great size.

The town possesses some religious and archæological interest. It is known throughout the Northern Circars as a place of pilgrimage. The particular point of sanctity is the *pāda gaya* pool in front of the Kukkutesvara-svami temple. According to the legend, a giant named Gayasura, who was so big that when he lay down his body stretched from Gaya to Pithapuram, once ruled southern India. He was killed by Siva while his feet were resting in Pithapuram near this pool. The pool is accordingly called the *pāda* ('foot') *gaya*. The local Hindus speak of three *gayas*, where different parts of the dead giant were found. One of these is the place of that name in Bengal, and it is held throughout this district that any one who bathes there ought also to bathe in the *pāda gaya* pool at Pithapuram. Three large images of Buddhist or Jain origin, sitting cross-legged in the usual contemplative attitude, stand at the side of one of the main streets of the town. They are known as *sanyāsi dēvulu* ('ascetic gods') and a festival is held in honour of them in times of drought, by which means, it is supposed, they are induced to send rain. Four interesting inscriptions have been found in the Kuntimadhava temple. These give some historical information and the genealogies of three lines of chieftains who ruled in the twelfth and thirteenth centuries<sup>1</sup>. A small mosque in the bazaar street has evidently been built with the materials of

<sup>1</sup> See Government Epigraphists' annual report for 1894, pp 2 ff., and inscriptions Nos 490 to 493 of 1893.

an old Hindu shrine It is locally supposed that the pillars came from the Kuntimádhava temple There are some inscriptions on the pillars

One of the largest cattle markets in the district takes place in the town every Saturday The sale of the right to collect the fees at this fetches over Rs 3,000 annually The excellent bell-metal work done in the place is referred to in Chapter VI About fifty households of Dévangas weave plain but fine cloths and about the same number of Senapatis make coarser stuffs

**Ponnáda** Lies near the sea coast eight miles east by north of Pithápuram Population 2,927 Its ancient importance is attested by the fact that three spots in Pithápuram town, namely, one of the fort gates, a well, and a cattle-stand, bear its name A building erected round a banyan tree in the village is held sacred both by the Muhammadans and the Hindus of the locality The legend says that long ago a Muhammadan widow wished to be buried with her husband, was prevented, but was permitted to live in this building which was erected over his tomb After her death the entrances to the building were closed

**Uppada** Seven miles east-south-east of Pithápuram, population 3,912 Contains a police-station The travellers' bungalow recently collapsed owing to the encroachments of the sea It is noted for its muslins, which are known throughout a large part of the Presidency They are referred to in Chapter VI About 200 Devangas are engaged in this industry

The village gives its name to a small zamindari estate with an income of Rs 2,700 and a peshkash of Rs 660 This was given by the late Rája of Pithapuram to his sister

The erosion of the coast and the existence of a submerged town here have been referred to in Chapter I

---

### RAJAHMUNDRY TALUK

---

RAJAHMUNDRY taluk lies along the left bank of the Gódávārī just above the head of the delta. Most of it is not a particularly fertile upland, and as much as 71 per cent of the soil is ferruginous. Nearly all the rest is regar. The taluk is irrigated chiefly by tanks, of which 28 of fair size are in charge of the Public Works department. The largest are those at Kottapallī (ayacut 970 acres) and Kāpavaram (823 acres). Rice is the most widely grown crop, but the areas under tobacco and castor are considerable. Nine per cent of the cultivable land is unoccupied, and the incidence of the land revenue per head is only Rs 1-10-11. The number of educational institutions in Rajahmundry town results in the people being more literate than in any other taluk, and over ten per cent of the male population can read and write. The industries of Rajahmundry town and Dowlaishweram are referred to below. At Rajānagaram and Kāteru a fair amount of weaving is done, at Duppalapudi black bangles are made by twenty Kāpus and the stone-carving of Jégurupādu is well known. Large taluk board chattrams have been established at Rājanagaram and Dowlaishweram.

Nearly the whole of the taluk is Government land. It includes nine villages of the Pithāpuram zamindari and also nine other small proprietary estates, but of these latter all but one consist of only one village. The exception is Vangalapudi, which comprises three villages.

**Dowlaishweram** Four and a half miles south of Rajahmundry. Population 10,304. It appears to have been a place of importance during the early struggles between the Hindus and Muhammadans and is now widely known as the site of Sir Arthur Cotton's great anicut across the Godavari, referred to in Chapter IV, is the head-quarters of two Executive Engineers, and contains the Public Works department's workshops mentioned in Chapter VI. The town is a union and contains a local fund dispensary (established 1892), a large local fund choultry, a fair-sized market, an English lower secondary school for boys, and a Sanskrit school. The choultry (called, after the house-name of the donor, the Krutvantivarī choultry) is endowed with land bringing in an income of Rs. 2,100 annually, and was bequeathed to the taluk board. The income is devoted to feeding Brāhmanas. There

are a small European church and cemetery in the village. What looks like a town wall and is pierced by the road entering the place is really only the bank of the old railway constructed to bring materials from the quarry to the river for the building of the anicut.

Dowlaishweram possesses considerable religious interest for Hindus. The name Dowlaishweram is derived from that of the neighbouring hill Daulagin. There, it is said, a saint named Nārada used to live, and he is credited with the foundation of the Vaishnavite temple of Janārdhanasvami on the hill, as well as of many other shrines to the same god in the villages on the river bank in this and the Ramachandrapuram taluk. That in Dowlaishweram has an annual festival lasting six days in February or March. A cave on the side of the hill is supposed to be the mouth of a subterranean passage leading to Benares. In it is a stone image called *Konda Nivāsudu* or *Santāna Gōpālasvāmī*, which is visited by women who desire to have children. The temple of Anjanēya contains two *rāvi* trees said to have been planted by Rama and Sita respectively, and there are two footsteps in the rock there which are supposed to be those of these two deities. Dowlaishweram is in consequence sometimes called *Rāma pāda kshētram*, 'the holy place of Rama's feet'. The sanctity of the village is also enhanced by the fact that it is the last place at which the waters of the Godāvāri flow down united and undiminished, and by a fanciful legend that 108 Siva temples lie buried somewhere or other in the neighbourhood. The result is that Dowlaishweram is one of the holiest of the bathing-places along this holy river, and is thronged by pilgrims during the *pushkaram* festival<sup>1</sup>.

A feast to the village goddess Mutyālamma is held in the village once every three years. A buffalo is sacrificed and afterwards votive offerings of pots of buttermilk are presented to the goddess; she is taken outside the village, and the pots are emptied there. The head of the buffalo and a pot of its blood are also carried round the village by a Māla and a pig is sacrificed in an unusual and cruel manner. It is buried up to its neck and cattle are driven over it until it is trampled to death. This is supposed to ensure the health of men and cattle in the ensuing year.

A few industries flourish in the place. Two Kamsalas make brass and bronze vessels and about 25 persons of various castes do really good wood-carving. The place is also known for its architects, who are said to be employed

<sup>1</sup> See Chapter I, p. 6

throughout the plain taluks of the district when houses are built.

**Gokavaram** Nineteen miles north-north-east of Rajahmundry Population 2,425 Contains a local fund rest-house and a large weekly market to which the hill people bring the produce of the Rampa country for sale

**Kórukonda** Eleven miles north-north-east of Rajahmundry Population 3,952 Contains a police-station A travellers' bungalow is kept up in the neighbouring village of Gónagudem A pilgrimage to the temple of Narasimhasvámi at Kórukonda is supposed to be of unrivalled efficacy in granting offspring to childless women, and the place is often thronged with suppliants of this class Rumour avers that the Bráhmans of the place take a personal and direct share in ensuring that their prayers shall not be fruitless, and the belief has passed into a proverb A festival which lasts for fifteen days takes place at the temple in the months of January and February

Kórukonda and its neighbour Kóti<sup>1</sup> appear once to have been of some political importance One of the Mackenzie MSS which deals with the ancient history of the district<sup>2</sup> gives some account of their early fortunes It says that Kóti and 101 Siva temples were founded by king Rájarája of the Eastern Chálukya line who reigned from 1022 to 1063 and is prominent in the traditional history of Rajahmundry, and that about two hundred years later a fort was built in Kóti by an early Reddi chief named Annala Déva The MS goes on to quote a local inscription of 1322-23, apparently still in existence at the end of the eighteenth century, which recorded the revenue arrangements made in the village by the Kakatiya king, Pratapa Rudra, who reigned till 1324 The Kórukonda fort was built some time afterwards by Kuna Reddi, 'a good Sudra who became ruler of the adjoining country,' and who governed wisely and well He was succeeded by his son Mummidi Reddi, one of whose servants erected the Lakshminarasimha temple The date of this event is given both in the MS and in an inscription quoted by Mr Sewell as 1353<sup>3</sup> Mummidi Reddi's three immediate successors ruled for the next 40 years One of them rebuilt the Ranganáthasvámi temple in 1394 95 A.D

<sup>1</sup> Said to be short for Kótilingam (a crore of lingams) and to be derived from the number of Saivite emblems about the place

<sup>2</sup> Local Records, vol. II, p. 231 and vol. XIX, p. 75. See also Chapter II, p. 25

<sup>3</sup> *Notes of Antiquities*, I, 21 The MS only gives the cycle year

From this point until Muhammadan times are reached, the MS is silent, but it gives details of the lessees of the place under the Musalmans. The fort was apparently destroyed by the vigorous and cruel Rustum Khán (1730-37) referred to on pp 29-30. Its ruins are still to be seen, and there is another ruined fortress at Kóti. On the Pandava hill west of Kórukonda are two rock-cut caves. The MS says that the Pándavas lived in them during their exile.

**Kottapalli.** Twenty-two miles north-north-east of Rajahmundry. Population 3,900. Contains a travellers' bungalow and a large tank which irrigates some 970 acres. The village gave its name to one of the 'pergunnas' of the old Polavaram zamindari. For many years this was divided from the rest of that estate and managed by a diwán, but in 1781 it was reannexed to it and shortly afterwards was placed under Narasimha, a brother of the Polavaram zamindar. During the fighting in 1785 at Gutala, described in the account of Pólavaram, two usurpers wrested Kottapalli from Narasimha and the Government troops had to interfere. They captured the place and put Narasimha over it once more. He stood aloof from the disturbance of 1790 referred to in the account of Pólavaram, but joined in the more considerable rebellion of Mangapati at the close of the century. Kottapalli was then occupied by a company of sepoy to keep the hill people of Rampa in check, and the young zamindar was ultimately captured and deposed. His estate was then again united with Pólavaram. It was however once more separated from it afterwards, and its 36 villages were sold in 1808 for arrears of revenue. The purchaser himself fell into arrears in 1829, and the estate was attached and remained under management till 1841, in which year it was put up to auction and purchased by Government. The village now belongs to Government. It was formerly the head-quarters of a deputy tahsildar.

**Rajahmundry** the head-quarters of the taluk, stands on the left bank of the Gódavari at the head of the great railway bridge (see p 133) which carries the Madras Railway across that river. It is a municipality of 36,408 inhabitants, and the second most important town in the district.

The earliest mention of Rajahmundry in any extant literature is in the introduction to the Telugu translation of the Mahábhárata, which was composed by Nannayabhatta in the reign of the Eastern Chálukya king Rájarája (1022-62) who is known to popular tradition as Rájaraja Naréndra. In this the town is called Rájamahendrapattanam ('the city of Rájamahéndra') and is referred to as the capital of the Eastern

Chálukya kingdom and 'the central gem of the Vengi country' Rajamahendra was a title borne by two of Rajarája's predecessors, namely Amma I (918-25) and Amma II (945-70), and the town was perhaps founded by and called after one or other of these kings. But one of the Mackenzie MSS attributes its foundation to an earlier king named Vijayáditya Mahendra.

The extension of the Eastern Chalukya dominions into the kingdom of Kalinga on the north must have rendered Rajahmundry an important strategical point. It is described in comparatively recent times as 'the barrier and key to the Vizagapatam country'.<sup>1</sup> On the downfall of the Kákatiya dynasty of Warangal before the armies of the Muhammadans in 1323, the conquerors made their way as far as Rajahmundry, and the 'Royal masjid' there contains an inscription dated 1323-24 which mentions Muhammad Tughlak of Delhi. Local tradition says that this building was formerly a Hindu temple and was converted to its present use by these Musalmans.

Rajahmundry next comes into prominence as the capital of one of the lines of Reddi kings.<sup>2</sup> Its first independent sovereign of that line has left inscriptions in it the dates of which range from 1385 to 1422. By 1458-59 a minister of the Gajapati king Kapilesvara was ruling at Rajahmundry, and in 1470-71 the town was captured by the armies of the Muhammadan Sultan of Kulbarga. About 1478 the Hindus revolted and the Muhammadan garrison was besieged and perhaps reduced. The Vijayanagar chieftain Narasimha seems to have occupied the town at this time and to have been driven thence by a relieving force from Kulbarga. In any case the Muhammadans soon recaptured Rajahmundry and king Muhammad of Kulbarga made the town his head-quarters for some three years (1478-80).

Soon after, during the dissensions among the Musalman powers in the Deccan, Rajahmundry was taken by the king of Orissa. About 1515, however, the town was captured by Krishna Deva, the king of Vijayanagar, in the course of his campaign against the Orissa dynasty.

By 1543 Rajahmundry was the frontier town of the Orissa country and lay on the borders of the new Muhammadan conquests south and west of the Gódávari river. It was ruled by a prince of the Gajapati house, one Vidiadri, who seems to have affected independence. He was ill-advised enough to join in an attack upon his Muhammadan neighbours some time between 1550 and 1564, and paid a heavy penalty. Defeated in

<sup>1</sup> Cambridge's *War in India* (London 1761), 207.

<sup>2</sup> *Ep. Ind.*, iv, 319.

the field, he was shut up in Rajahmundry. The Muhammadan powers of the Deccan then combined to deal a death blow to the Vijayanagar kingdom, and he obtained a short respite. But on the return of the Musalman invaders he was again defeated outside the walls of Rajahmundry. At their first onset in this battle his troops broke the right wing of the enemy, but on their reserve coming up, the fugitives rallied and drove their assailants inside the fort. Vidiadri was besieged there for four months, and at last (1571-72) was compelled to surrender. The fire of the heavy artillery of the Musalmans had made a breach nearly fifty paces in length in the curtain of the fort, and further resistance seemed useless. Vidiadri was permitted to go unharmed and Rajahmundry was never again a Hindu possession.

The neighbourhood was the scene of a stubborn battle a few years later, when the Muhammadan governor defeated the insurgent raja of Kasimkota. The fate of the day hung long in the balance and victory was only secured by a charge of Muhammadan cavalry which had turned the flank of the Hindu army.

On the disruption of Aurangzeb's empire, Rajahmundry became the head-quarters of a Nawabship of the province of Golconda. The names of the Nawabs, and indeed of all the Musalman governors of the town from 1572 to 1769, are given in the Mackenzie MS. referred to above.

After the cession of the Northern Circars to the French in 1753 Rajahmundry on account of its central position, was chosen by Bussy as his head-quarters in preference to Masulipatam. It remained the French capital till the English invasion of 1758. On the evening after the battle of Condore, a force of 1,500 sepoy was sent on by Colonel Ford to occupy the town. They arrived on the following evening (December 10th 1758) and found the French, who imagined the whole English force to be upon them, in the act of evacuating the fort. One boat laden with several Europeans was in the middle of the Godavari river, and some others with a few small field-pieces had just reached the opposite bank, when the English arrived. The English sepoy opened fire on them from the walls of the fort and this deterred them from carrying off their guns, or remaining in the vicinity. Fifteen Frenchmen were taken prisoners in the fort and also a quantity of ammunition and stores. The town was shortly afterwards, however, retaken by the French. When Colonel Forde advanced southwards against Masulipatam in February 1759, only a small garrison, some sick and wounded, and some

treasure had been left there, and a detached French force made a dash for the place and easily captured it. The Commandant had only just time to send his treasure to Cocanada and his able-bodied men in retreat towards Vizagapatam before the French arrived. The latter, however, did not attempt to hold the place.

During the few years thereafter in which the district was again in the hands of the Nizam, Rajahmundry was the headquarters of his local representative, Hussain Ali Khán. The latter's position was precarious, and an English force of 200 sepoys and twelve artillery men under Lieutenant (afterwards Sir Henry) Cosby was sent to Rajahmundry to support him. Two rival claimants were at that time competing for the position of Nawab. A near relative of one of them was commandant of the fort at Rajahmundry, and had 500 Arabs, ready for any mischief, under him. He had entered into a conspiracy to take the town and hold it for his relative, but his design was defeated by the vigour and promptitude of Cosby, who, despite the insignificance of his force, took him prisoner. Reinforcements were soon received from Masulipatam, and Cosby maintained his position at Rajahmundry till the country was ceded to the English.

Though Masulipatam then became the centre of the administration, troops appear to have been stationed at Rajahmundry for many years. When, in 1794, the Chief and Council at Masulipatam were replaced by Collectors, one of the latter was stationed at Rajahmundry. When the 'Rajahmundry district' was constituted, the Collector did not live in the town which gave his charge its name, though from the very first this had contained the court of the Zilla Judge appointed in 1802,<sup>1</sup> and it was not until 1867 that even the Sub-Collector was stationed there. The Sub-Collector, the District and Sessions Judge and the District Superintendent of Police are stationed there now. The place moreover contains the usual taluk offices, a sub-registrar and a district munsif. It is the head-quarters of the American Evangelical Lutheran Mission, which keeps up a high school there, a station of the Roman Catholic Mission, and contains several Christian churches and two European cemeteries. The older of the latter is near the old Civil Court, and the tombs in it go back to 1771. The other contains a large number of graves dating from 1862 down to the present day.

The town also contains two travellers' bungalows, one belonging to the municipal council and the other to the taluk

<sup>1</sup> Chapter XIII, p. 189.

board, several private chattrams, two of which are important institutions, two police-stations, a police school and a large Special Police Reserve, a municipal hospital and a mission dispensary, a first-grade college, a training college, two high schools, three English lower secondary schools for boys, one English and three vernacular lower secondary schools for girls, and a Sanskrit school. The choultries are referred to in Chapter VII, the chief medical and educational institutions in Chapters IX and X respectively and the municipal council and its doings in Chapter XIV.

Rajahmundry is not only of interest historically and as an administrative centre, but is also of importance to Hindus from a religious point of view. It is held that all pilgrims going from this district to Benares should also visit Rajahmundry, and most of these people bathe in the river there on their way back from the holy city. They also observe the curious custom of emptying half the contents of the pots of Ganges water they bring back with them into the Gódavari, and fill them up again from the latter river. It is believed that if this is not done, the Ganges water will quickly dry up in the pot. The sanctifying effect of a bath in the Gódavari at Rajahmundry is placed so high that people come by train all the way from Madras for the purpose, often going back the next day. The bathing place is called the Kotilingam ('crore of lingams') ghat. The name is explained by a story that the Bráhmaṇ sages at one time wanted to make the place as sacred as Benares, where there are supposed to be a crore of lingams, and therefore set themselves to found the same number here in a single night. Unfortunately the day dawned before the last one was made. The lingams are supposed to lie buried in the bed of the Gódavari opposite the ghat. The river is held to be particularly sacred at Rajahmundry (and Dowlaishweram) because, like the Cauvery above the delta, it is still undiminished by division into many branches. It is called the Aganda ('entire') Gódavari, just as the other is called the Aganda Cauvery. The Rajahmundry ghat is one of the centres of the great *pushkaram* festival, which takes place once in thirteen years.<sup>1</sup>

The place is also noted for the worship of a very widely known village goddess called Chamalamma, whose image reposes under a tree about a mile away. A fortnight's festival in her honour is celebrated in the last month of the Telugu year (March-April), and at this a mud pot which her spirit is supposed to enter is taken round the town every day.

<sup>1</sup> See Chapter I p. 6

and worshipped. Various peculiar rites are performed at the festival. The buffalo which is sacrificed is not killed outright, but a wound is first made in its neck and a potful of its blood is collected. A hook-swinging is conducted, but a sheep is the victim, and not a man, and it is swung by a rope tied round its body. The ordinary offerings of sheep, fowls, buffaloes etc. are also made in fulfilment of vows. Another local deity is called Kannamma Pérantalu ('housewife Kannamma'). She was a Reddi woman. She, her husband, and her six sons all died on one day of cholera about 40 years ago, and her soul appeared to one of her relatives and said she had been deified. Ever since then she has been worshipped by all the non-Brahman Hindus of the place, who offer her sheep, fowls, cloths etc. Her shrine is an unpretentious tiled house.

The industries of the place are of some note. Some 400 households of Devangis weave coloured cloths for men and women, and some of them can do simple embroidery. A few Rangaris stamp chintzes and some thirty Kamsalas make vessels of brass, bell-metal and lead. One or two Muchis are said to paint with skill and thirty Kamsala and Odde carpenters do excellent wood-carving. Three fair-sized tanneries, managed by Labbais, are at work, and good shoes are made by Madigas and Gódáras. A few potters make good gujas.

---

## RĀMACHANDRAPURAM TALUK

---

RĀMACHANDRAPURAM taluk lies along the left bank of the Gautamī Gōdāvarī just below the head of the delta

Almost all its soil (91 per cent) is alluvial, it is irrigated by the Gōdāvarī water, nearly the whole of it is cultivated, and the density of its population is second only to that of Nagarām island. Paddy is naturally the chief crop but tobacco is grown in fair quantities, and the area under sugarcane is greater than in any other taluk in the district. Detailed statistics regarding the crops and other matters will be found in the separate Appendix.

Local industries are few. Kotipallī and Draksharamam are sacred places, and the temple in the latter contains many ancient inscriptions.

Nearly the whole of the taluk is now Government land. Eight villages belong to the Pithapuram zamindari, eight others to the Végayammāpeta estate and five more each make up a small estate.

**Bikkavolu** Nine miles north of Ramachandrapuram. <sup>1</sup> Population 7,994. It is a union and contains a sub-registrar's office and a small local fund market. Two Muchi wood-carvers do good work. The village is said in one of the Mackenzie MSS <sup>1</sup> to have been the capital of the earlier Eastern Chālukya kings before they moved to Rajahmundry. It is said to contain extensive ruins and some deserted temples <sup>2</sup>.

The place is now famous as a centre of snake-worship. The snake-god Subbarāyadu has a three days' festival there in the *sashti* (sixth day) following the new moon in Margasīra (December-January), which goes by the name of the *Subbarāyadī sashti*. People attend this in the hope of obtaining relief from small bodily ailments (such as boils and pains in the ears, eyes, etc.) and in order to get children. Childless women spend a night fasting in the temple clothed in a particular kind of cloth (called *nāgula kōkalu*) in which the colours are mixed in a peculiar way. All castes appear to resort to the temple for the purpose. In former times a cobra was supposed to come out and show itself on one of the days of the festival.

<sup>1</sup> Wilson's *Catalogue* p. 397 No. 12. 4

<sup>2</sup> Sewell's *Lists* 1, 25

**Draksháramam** Four miles south by east of Rámachandrapuram, population 11,213. Contains a private chattram for feeding Bráhmans, a police-station, a sub registrar's office and a large cattle-market. The union of which it is the chief village also includes Vélamapálayam Tótápéta, Jagannávakulapálayam and Végayammapeta. Two Muchi wood-carvers do particularly good work, and a little weaving of tape and cloths is carried on.

The village is noted for its fine temple and for its sanctity. Its name is said to be more correctly 'Daksharáma' and to mean 'the Garden of Daksha'. According to the well-known story in the *Sivapurānam*, this Daksha was a Bráhmaṇ, the father-in-law of Siva. Thinking that he had not been properly treated by that god, he performed a *yágam* (sacrifice) without inviting him to be present. His daughter attended uninvited, he treated her discourteously, and she accordingly plunged into the fire of the sacrifice. Siva burst into a sweat on hearing the news and from this perspiration was born Virabhadra who went and killed Daksha. Orthodox Brahmins will not perform a *yágam* inside the village as it is held to be an ill-omened place.

The real centre of the religious interest of Draksharamam is the temple of Bhimesvara-svami. It contains a particularly big lingam, some fourteen or fifteen feet high. This is supposed to be part of a lingam which broke into five pieces and fell at five holy places namely at Bhimavaram or Bhimarāma in Cocanada, Palakollu or Kshira-rāma in Kistna, Amarāvati or Amara-rāma in the Guntur district, and Kumāra-rāma, which is not identified. It is supposed to have been erected by the sun and worshipped by the seven sages who made the seven mouths of the Gódvārī.<sup>1</sup> So it is sufficiently holy. The seven sages are supposed to have each brought water from their respective rivers underground to the tank at Dráksháramam, which is called the *sapta Gódvārī* 'seven Gódvārīs'. There is a sacred bathing ghat in this tank which confers in a condensed form all the sanctity which is to be obtained by separate baths in each of the seven rivers.

Like many other holy places in this and other districts, the town is called the southern Benares. It is supposed to have been founded by the sage Vyása and a *rāvu* tree and a lingam planted by him are still shown. So great is its sanctity that a night's halt in it is believed by some to render

<sup>1</sup> Chapter I, p. 6.

future births unnecessary. A festival is held in honour of the god every Makha (February-March), and lasts for five days beginning on the eleventh day after the new moon day.

The temple is a rather handsome two-storeyed building. Its erection is ascribed by popular tradition to an unknown Chóla king. In the porch round the shrine in the upper storey are black granite Chalukyan pillars, a great rarity in this district. The lower porch is also of black granite. On the northern side of the temple a figure of a Jain tirthinkara, sitting cross-legged, is carved on a stone slab. The stone *Nandi* (bull) and Hanumán in the temple have had their heads knocked off, and it is said that this was done by the Marátha marauders<sup>1</sup> when hunting for treasure. In the temple is a curious well the mouth of which is the shape of a strung bow. It is called the *rudra tirtham* and a bath in it is holy. The lingam at the side of the western gate is supposed to go to Benares every night.

The temple has an annual allowance of Rs. 1,000 from Government and some of the servants in it have inam lands. But it is a large building and is not in particularly good repair. It contains a great number of ancient inscriptions. No less than 271 of these have been transcribed by the Government Epigraphist (Nos. 181 to 451 of 1893). The earliest appears to be No. 185 which is dated in A.D. 1055 or during the reign of the Rajaraja whose capital was at Rajahmundry. The latest appears to be No. 426 which belongs to the Reddis' times, and is dated in the year corresponding to 1447 A.D.

Draksháramam is sacred to Muhammadans also. The mosque and tomb of a saint called Saiyid Shah Bhaqí Aulia are much revered by the Muhammadans of the neighbourhood, who are often buried within their precincts. This saint is said to have been a contemporary of the famous Miri Sahib of Nagore near Negapatam, and, like that rather shadowy personality, to have lived some five hundred years ago. He was born, it is said, at 'Gardez,' near Medina and visited Draksháramam with four disciples. Being hungry, the visitors slaughtered the bull belonging to a *math* of the local Saivite priests. In the disputes which ensued the comparative holiness of the Muhammadan saint and the Saivite head-priest was called in question, and to test the matter a lingam was thrown into a pond (the *Langdla cheruvu*) and each was told to charm it back again. The saint succeeded, was given the *math* to live in, and turned it into a mosque. A very similar tale is related

<sup>1</sup> See Chapter II, p. 30.

of the Bábayya darga at Penukonda<sup>1</sup> The saint had a daughter, and her descendants are still living They are said to receive an endowment from the Nizam of Hyderabad. In former times a festival of some importance used to be held at the mosque, but of recent years it has ceased to be observed

Two Dutch tombs stand in the village on what is called the *Ollandu dibba* ('the Holland mound') They are dated 1675 and 1728 respectively and are covered with the sculptured slabs which are characteristic of Dutch tombs in this Presidency

**Gangavaram** Seven miles south of Rámachandrapuram Population 1,532 The name is supposed to mean 'Ganges blessing', and to explain it a legend has been invented to the effect that the Gautamí Godavari blessed the Ganges at this place Defiled by the sins of the many wicked people who bathed in her, the latter river used to come every day in the form of a crow to be purified by the Gautamí, and used to return in the form of a *hamsa* bird At last the Gautamí took pity on her and blessed her, and now she can purify herself

**Kotupalli** Nine and three-quarter miles south of Rámachandrapuram Population 2,476 It contains a travellers' bungalow and a large private choultry maintained by the proprietor of Polavaram, at which travellers are fed Tape and *kusa* mats are manufactured on a small scale in the village Its correct name seems to be Kódipalli which Dr Macleane translates 'border village' apparently from the Tamil *kódi* It is also sometimes called Kotipali, which means 'a crore of benefits' and is explained by the assertion that the value of a good deed done there is increased one crore-fold by the sanctity of the place The place is in fact held very sacred by Hindus A bath in the Gódavari here has virtue to expiate the most terrible of sins, even incest with a mother, and the bathing-ghat is called *mátrigamanághadháru* for this reason A story is told of a Bráhmaṇ who inadvertently committed this sin, and was in consequence turned into a leper until he bathed here

The temple is dedicated to Sómésvara, 'the moon god,' and is supposed to have been built by him to expiate his sin of having seduced the wife of his teacher Brahmaspati The injured husband cursed the moon and caused it to lose its brightness In the same precincts is a shrine to Kótisvaradu, 'the god of crores' This was built, it is declared, by Indra

<sup>1</sup> *Anantapur District Gazetteer* 193

to atone for his seduction of the wife of Gautama. The erring god brought 'crores of waters' underground to the Gódavari at this place, and the deity of the temple took his name from this act. There is a local festival there every year on the Sivarátri day. The great *pushkaram* festival held once in every thirteen years is celebrated here with great éclat.

Kótupalli forms a proprietary estate which pays a peshkash of Rs 5,831. It belongs to the Raja of Vizianagram.

**Máredipáka.** Seven miles west by north of Ramachandrapuram. Population 1,005. Some Singams do a little tape-weaving there. After Kandrakóta in Peddapuram taluk, this is the greatest centre for the worship of the village deities in the district. The goddess of this village is called Mavullamma. She was originally a mortal maiden who was persecuted by her mother. Unable to bear the latter's cruelty, she hid in a cave by a mango tree, and disappeared for ever. Some days later she was seen in a dream by her parents and informed them that she had become one with the divine, and must henceforth be worshipped as a goddess. This has been done, and the priests at her temple are supposed to belong to her family. The annual festival in her honour, which lasts for a fortnight, attracts many pilgrims. One peculiar feature of the ceremonies is that the blood of the sacrificed buffalo is left in the temple all night with various kinds of grain scattered around it and the door secured and sealed. In the morning, it is said, a foot-step is seen in the temple and some of the grain is found thrown into the pot. This is considered to afford a forecast of the coming season, those grains being expected to do well which are found in the pot.

**Ramachandrapuram.** Head quarters of the taluk, and once the chief village of a large ancient zamindari which was eventually bought in by Government. The place is a union of 10,692 inhabitants, the other component villages being Pasalapudi and Mutsumilli and contains a travellers' bungalow, a local fund rest-house for natives, a police-station, an English lower secondary school for boys and a local fund hospital founded in 1876. A tahsildar, stationary sub-magistrate and sub-registrar are stationed there. Some 25 Devanga households weave cloths of a fair quality. The village is a centre of trade in local produce.

**Rámaghattalu.** Four miles east of Kótupalli. It is a hamlet of the village of Masakapalli, the population of which is 2,244. It contains one of the many temples supposed to have been founded by Ráma to expiate the sin of having killed the Bráhmaṇ king Rávana. Ráma's foot-steps are said

to be visible on a rock there. A bath at this place on the Sundays in the month of Makham (February-March) is considered holy.

**Vegayammapeta.** Five miles south-south-east of Rāma-chandrapuram and part of Drākshāramam union. Population 2,004. Contains a lower secondary school for boys. It is the chief village of an ancient zamindari, which comprises ten villages and pays a peshkash of Rs 8,055. The present holder says that the estate was originally given by 'Haider Bādshāh'—apparently the Nizam of Hyderabad—to one of his ancestors for his literary ability. It was permanently settled in 1802 on a peshkash of Rs 8,750. The estate was diminished by a partition in 1809 and in 1879 a suit about it went up as far as the Privy Council. The present zamindar<sup>n</sup> says that she is the eleventh in descent from the original founder.

---

## TUNI DIVISION

TUNI division lies in the north-east corner of the district. It is the most sparsely populated tract in the district outside the Agency, and education is very backward in it.

It is a hilly tract and contains little irrigated land. One large tank waters nearly 2,000 acres near Hamsavaram, and a few channels take off from the Tandananadi river. The local rainfall averages only 35.79 inches which is low for this district. The incidence of land revenue per head of the population is only seven and a half annas. The weaving at Tunī is as good as is to be found anywhere in the district, and a considerable manufacture of oil is carried on at the same place. Bangles are made at Hamsavaram and Kottapalli.

The division contains the whole of the Kottam or Tunī estate and twelve villages belonging to the Pithapuram estate.

**Bendapudi.** Twelve and a half miles south west of Tunī.<sup>1</sup> Population 1,477. It contains the ruins of what must at one time have been a very large fort. Old copper coins (and more rarely, gold ones) are found there after ruin. People believe that the philosopher's stone (*paravēdi*) is also to be found there. The ruins include many dilapidated temples. Popular legend ascribes the building of the fort to the Kákatiya king Pratapa Rudra, and the same account of it is given in one of the Mackenzie MSS<sup>1</sup> called the '*Korukonda kyfeat*,' which gives a description of that place. The fort at Bendapudi is said in this to have been founded by two brothers, Pedda Malla Rāzu and Chinna Malla Rāzu, who ruled the country under Pratapa Rudra. They were an effeminate and tyrannical couple, if the account is to be credited. They drew upon themselves the vengeance of the king of Cuttack by abducting the bride of one of his relatives, who was passing through the district. An army came from Cuttack to exact vengeance, and the fort was besieged. It fell after a siege of six years, the water-supplies being cut off. The affair is described in some detail in the manuscript.

In the hamlet of Tirupati Agrabhāram is a temple to Venkatesvarasvāmī, in honour of which a five days' festival is held every year in Chaitra (April-May). This is largely attended and is well known to people living north of Cocanada.

<sup>1</sup> Wilson's *Catalogue*, 396, 8 (3)

**Hamsavaram** Six miles south-south-west of Tunī Population 1,909 Lime is collected there in large quantities and taken to Tunī to be burnt, and glass bangles are made there

**Kottapalli** Nine miles south-west of Tunī Also called Ayyapparazu Kottapalli Population 2,449 There is a mound by the roadside near the village, which is known as the tomb of one Māla Bucchamma, a Māla woman who is said to have burnt herself to death many years ago, no one knows why People of all castes make prayers and vows at this tomb In the hamlet of Sitarāmpuram glass bangles are made

**Talluru** Two miles west-north-west of Tunī Population 248 A cave in a hill there contains the image of Talupulamma ('door mother') a goddess very much revered in this division The adjoining valley is called Talupulamma lōva From the hill a perennial spring flows down into the jungle This is a very favourite bathing-place, and the local people pretend that they do not know where the stream goes to They declare that the torrent shrinks or widens in proportion to the number of people bathing in it! The goddess is especially appealed to in time of drought, her favourite days being Tuesdays, Thursdays and Sundays She is worshipped with the usual animal sacrifices

**Tatipaka** Six miles north-north-west of Tunī Also called Tatipaka-Jagannāthanagaram Population, 346 A tomb there is called the *gundam* (pit) of Lakshmamma, a woman who is supposed to have committed *sati* at this spot It is revered by the people of the locality and a small festival is held there in February or March

**Tetagunta** Seven and a half miles south-west of Tunī Population 2,600 A hill there called the *Parnasala konda* is supposed to have been inhabited by the Pandava brothers It contains a large cave about a hundred yards in length and consisting of two compartments

**Tunī** Head-quarters of the division, and the chief town of the Tunī or Kottam estate Besides the offices of the deputy tahsildar and a sub-registrar, the town contains a police-station, a travellers' bungalow, a private choultry for feeding Brahmans and Sudras, a large local fund market, a local fund dispensary (established 1879) and the zamindar's high school for boys It has been constituted a union and has a population of 8,842 Good weaving of the same kind and quality as in Uppada is done there by about 200 Devāngas, a few Kapus do simple dyeing and chintz-stamping, five or six blacksmiths make ordinary household vessels of brass, a large manufacture of castor and gingelly oil is carried on, and

there are two factories for the purpose, and the place is a considerable trading centre

The Kottam estate is interesting as being the only remnant of the old Peddapuram zamindari which remains in the hands of the original family. It was created in 1810. A claim was advanced in that year to the zamindari of Peddapuram by a relation of the then zamindar, and, in settlement of that claim, the Kottam estate, till then a portion of the Peddapuram zamindari, was severed from the rest of the property and made over to the claimant's father, Vatsavaya Surappa Razu. The two estates were once again for a short time under the same proprietor. In 1838 one Surya Narayana grandson of Vatsavaya Surappa Razu, was recognized as proprietor of the Kottam mita and soon afterwards succeeded also to the Peddapuram zamindari, but the latter estate had been held for but a short time by him when it was sold for arrears of revenue. The present zamindar, Raja Vatsavaya Venkata Simhadri Jagapati Razu, is the second son of Surya Narayana, and succeeded to the estate after the death of his elder brother in 1879. He is now (1906) fifty-two years old. The property consists of 38 villages situated within a radius of twelve miles of Tuni. It pays a peshkash of Rs. 26,219.

---

## BHADRÁCHALAM TALUK

---

BHADRÁCHALAM taluk runs along the left bank of the Gódávari above the Ghats, by which it is cut off from the rest of the district. It is intersected by the Saveri, an important tributary joining the Gódavari at Kunnavaram. Owing to its position beyond the Gháts its climatic conditions are rather different from those of most of the district. The variations in temperature are greater, and the rainfall, which is almost all brought by the south-west monsoon, is 43.39 inches at Bhadráchalam a high record for this district, and probably much greater in other parts of the taluk. The officer who drew up the working-plans for the Rickapalle forests inferred 'from an examination of the undergrowth and the general factors of that locality that 70 inches would be a closer estimate' of the annual rainfall among them. The taluk is for the most part covered with low hills and forest. Some high hills rise to the west of the Saveri river adjoining the Gháts, and a smaller cluster stands some way from the Godavari and to the east of the Saveri near Bodugudem in the centre of the taluk. The whole of the taluk is malarious, especially the villages along and to the east of the Saveri river, but the scope for irrigation is considerable, and with more energetic ryots and a better land system cultivation might be largely extended.

Cholam is the staple crop of the country, though paddy and a little tobacco are grown along the river banks. The taluk appears to contain no indigenous industries whatever. The lace-work of the Dummagudem mission is referred to in Chapter VI.

The taluk is of interest in several unusual directions. The curious Kóya people (see p. 60) make up a large proportion of its inhabitants, its revenue system, inherited from the Central Provinces administration, is in most respects (p. 174) unusual in this Presidency, coal has been mined for at Gauridevipéeta (sixteen miles east of Bhadráchalam), albeit (p. 10) without much success, and plumbago has been worked at Pedakonda, garnets, rock-crystal, sapphires and gold are found, the country possesses many legendary associations with the story told in the Rámáyana of Rávana's stealing Sita, the wife of Ráma, and in it, from fifteen miles below Bhadráchalam

to four miles north of Dummagudem, are a number of rude stone monuments. No weapons have yet been found in these, but they contain half-burnt pottery, charred bones and beads of ivory and glass. From the position of skeletons around them it would appear that human sacrifices accompanied the funeral ceremonies.<sup>1</sup> Forts ascribed to the Reddi dynasty are found at Nallapalli, four miles north-east of Dummagudem, and at Vaddigudem near Rekapalle. There are also the remains of a fine stone fort at Devarapalli, nine miles east of Bhadrachalam, but it was largely demolished by the engineers engaged in the Upper Gódvári navigation works.

As is mentioned in Chapter XI, the zamindar of Bhadrachalam has a semi-proprietary right over the whole of the taluk. Beneath him, but still recognized by Government, are a number of other proprietors of larger or smaller estates. The only one of these which is of any size is Rekapalle, which was for some time independent of its suzerain and the history of which is sketched below. The others only contain a village or two apiece. The largest are those of Nandigáma, which contains ten villages and pays a peshkash of Rs 1308, and Tripurapantavidu, with seven villages and a peshkash of Rs 1,195. No other inferior proprietor pays as much as Rs 400 peshkash.

**Bhadrachalam** Head-quarters of the taluk and of the Head Assistant Collector. Population 1,783. It is the chief town of the zamindari of the same name. The original holder of this is said to have been one Anapa Ashwa Rao, who received it in free jaghir from the Emperor of Delhi in A.D. 1324 on condition of keeping up a body of 500 foot for service, and it is stated that the property has remained almost ever since in the families of the founder or his kinsmen. The taluk formed part of a large estate which is called by Captain Glasford<sup>2</sup> the Hussanabad Sankaragiri zamindari, and is also spoken of as the Palavancha estate from the town of that name in the Nizam's Dominions, in which a large portion of it lay. The zamindar of Bhadrachalam is zamindar of Palavancha also.

In 1769 one of the Nizam's officers put the then zamindar to death and took the estate under management till his own death in 1778, when it reverted to the founder's family. In 1809 an adoption, said to have been the first in the family, was made. This was the cause of a great deal of disturbance.

<sup>1</sup> Sewell's *Lists*, i, 20.

<sup>2</sup> See his settlement report on this taluk (Nagpur, 1869), para 41.

and even bloodshed. The adopting zamindar belonged to the Damara Ashwa Rao family, and selected as his heir a boy of the Kundemulla family. This choice was resented and resisted by another family, called by Captain Glasford the Setpillly Ashwa Raos who thought one of their members ought to have been selected. The struggle between the members of these families went on for more than forty years. The Setpillys were at first victorious, but their representative made a raid into British territory and was taken prisoner and carried off to Hyderabad in 1811. The Damara adoptee was now appointed zamindar by the Nizam, but he was so harassed by the Setpillys that in 1819 a European officer (Mr Ralph) was sent with a body of local troops to Palavantha, where he remained to keep order for three years. The Nizam soon intervened again, this time granting a small portion of the estate to the Setpillys and one village to the Damaras, and taking the rest under his own management. The Setpillys defied the local authorities in 1844 and seized the greater part of the estate, but their representative died in 1851, and, after a little disturbance and some negotiation the property was handed over finally to the Damaras on a decision being passed in their favour (in 1852) by an influential pancháyat of zamindars. The Damara appointed in 1852 was succeeded by his mother in 1859, who was followed before her death in 1874 by her daughter's son Parthasarathi Appa Rao, who is the present zamindar. The estate at one time (see p 175) also included the present Rekapalle zamindari.

Until the taluk was handed over to the British Government by the Nizam in 1860 the Bhadrachalam zamindar always kept up a troop of Rohillas, who received very little pay for their services and lived chiefly by looting the country round. The taluk was divided into ten *samuturs* each of which theoretically contained twenty-five Kova villages and each of which had to supply for a month, without pay or batta a hundred Kóyas to carry burdens, fetch supplies, etc., for the Rohillas, and a hundred Madigas to act as horse-keepers. The whole country appears to have been at the mercy of these undisciplined Rohillas. 'All was grist,' writes Mr Cain,<sup>1</sup> 'that came to their mill, even the clothes of the poor Koi women, who were frequently stripped and then regarded as objects of ridicule. The Kois have frequently told me that they never could lie down to rest at night without feeling that before morning their slumbers might be rudely disturbed, their houses burnt and their property carried off. As a rule they hid their grain

<sup>1</sup> *Ind. Ant.*, v, 303

in caves and holes of large trees                      The last great (plundering took place in 1859 not far from Parnasala'

The present position of the Bhadráchalām zamindar is in many respects unlike that of most other zamindars in this Presidency owing to his estate having been first settled by the Central Provinces Government. The point is referred to in Chapter XL.

Bhadráchalām is considered a holy spot since Rama is supposed to have lived there for some time after the abduction of Sita. The name means 'the hill of Bhadrá,' and is said to be derived from the fact that a saint of that name was living there at the time of Rama's sojourn. Rama promised to return when he had found Sita, and did so after many years, and gave the saint salvation. The temple in the village, which is built on the top of a small hillock and is not remarkable architecturally, is supported by an endowment from the treasury of the Nizam of Hyderabad, which amounts to Rs 19,000 a year but small sums from which are diverted to the upkeep of the temple at Parnasáli and those in Hyderabad territory at Mótigaddi and Viruvandi opposite Chintlagudem and Turubaka in this taluk. Legend says that the first beginnings of the Bhadrachalām shrine were made by a *haidagi* who took up his abode there, built a small temple and carved a rude image of Rama. More authenticated history commences about 1725, when Ráma Das, an official of the Nizam's government, was sent to collect the revenues of this taluk. Instead of transmitting the money, he spent it in enlarging the shrine and building the *gopuram*. His superiors at last objected to this and sent a number of Rohillas who carried him to Hyderabad, where he died after imprisonment of twelve years. Tradition, however, declares that he was miraculously ransomed by Rama and Lakshmana (who appeared before the then Nizam in person) and returned to Bhadráchalām, where he disappeared and became one with the god. His adventures are the subject of a book of Telugu poems, called the *Rama Das kirtana*, which is widely known throughout the country. The poems in this are often sung by the Telugu bards (*bhāgavatas*) who are in such favour at social gatherings throughout south India.

Rama Das was succeeded in his office by a certain Tummu Lakshminarasimha Rao who, wiser than his predecessor, annually despatched part of the tribute and devoted the rest to finishing the work the latter had begun. He also commenced another temple. While he was thus engaged a wealthy man from Madras, named Varadarama Dás, brought two lakhs

- v of rupees to Bhadrachalam and agreed to help him to complete the work. Before this could be done, however, the Nizam's government, dissatisfied with the small amount of revenue received, sent a number of sowars to take Lakshminarasimha Rao to Hyderabad. He bribed the sowars to give him a little grace, promising to follow them shortly to Hyderabad. The rich man from Madras died soon after their departure, and Lakshminarasimha Rao embarked on rafts to cross the river taking with him the dead man, his widow and mother, his own mother and a number of servants. Half way across he threw the corpse into the river and plunged in himself, followed by the widow, her mother-in-law and most of their followers.

The Nizam originally endowed the temple with a lakh of rupees, but the endowment was gradually reduced till in 1840-41 it was fixed at Rs 19,125, for which a sanad was given. An important festival takes place at the temple in the month of Chaitra (March-April) and is said to be attended by as many as 20,000 people from all parts of India, in spite of the difficulties of the journey thither. A common object of the pilgrimage is to obtain children, the childless women sleep behind the temple and draw in augury of the future from their dreams.

**Dummagudem** Thirteen miles north of Bhadrachalam. Population 2,556. It was the head-quarters of the old Upper Godavari Navigation project referred to in Chapter VII. Operations on this were discontinued in 1871, but while they were in progress Dummagudem was a busy town. It is now an insignificant village. The amicut is in good condition and a large lock stands close to the village and a canal runs parallel with the river there for two miles. The lock is in fair condition, but was much damaged by the floods of 1900. The village is also the head-quarters of the Church Missionary Society in the district (see p. 41) and the centre (p. 112) of a lace making industry fostered by this. A number of roughly carved idols have been dug up near the place.

**Gundála** Four and a half miles east of Bhadrachalam. Population 359. This (like Sarpavaram in the Cocanada taluk) is said to be the place where king Janamejaya, the son of Parikshit, performed the sacrifice described in the Mahabharata because his father had been bitten by a snake. A hot spring in the bed of the Godavari near by is pointed out as the pit (*gundam*) where the sacrifice was performed. Pilgrims to Bhadrachalam bathe in this and the name Gundála is supposed to be derived from it.

**Kumárasvámigudem** Twenty-six miles south-east of Bhadrachalam Population 110 Contains a very old and sacred temple to Kumárasvámí, son of Siva He was devoted to the fair sex more than was seemly, and his father cured him by contriving that any woman he looked upon should at once assume the shape of his mother, Parvatí The first occasion on which this happened was at Kumarasvámigudem, and Kumárasvámí induced Siva to direct that a bath in the Godavari at that spot should have great sanctifying virtue The temple has no income and is very much out of repair

**Kunnavaeram** Stands at the junction of the Saveri and Gódavari rivers, population 1107 Formerly the station of the Special Assistant Agent and now the head-quarters of the District Forest Officer, Upper Gódavari It is an important point for the river-borne trade, as it is beyond the Gháts and the unbridged Saveri and carts can travel from it to Bhadrachalam

**Parnasala** Twenty-two miles by road north of Bhadrachalam Population 276 It is widely believed in the district that this is the spot on the banks of the Gódavari described in the Ramayana where Ravana carried off Sita

In a stream bed near the village the people show the stone on which Sita is supposed to have sat while bathing Certain marks on a rock resemble foot-prints and these are therefore called Sita's foot-prints and are revered accordingly On another rock are yellow stains which are attributed to the yellow dye from Sita's clothes when they were laid out to dry, or, according to another account, to the saffron she used to adorn herself withal The black stain left by Rama's sash when put out to dry is also shown on another rock The Nalugu gutta hill on the opposite side of the river is supposed to have been formed by an accumulation of *nalugu* (a kind of soap) left by Sita after her daily bath Behind the Vishnu temple is a hollow which is pointed out as the exact place where Sita was seized, some of the earth is said to have been carried off with her There is also a Siva temple in the neighbourhood where, it is said, Ravana used to pretend to worship, disguised as a mendicant

A small festival is held at Parnasala in Chaitra (March-April) at the same time as the Bhadrachalam festival, and those who visit the latter place go on to Parnasala

**Rekapalle** Twenty-eight miles east-south-east of Bhadrachalam, and below the junction of the Gódavari and Saveri rivers Population 617 The name means 'wing village' and is explained as referring to the abduction of Sita which

- V tradition locates in this taluk. It is supposed that the wings of the bird Jatayu, who tried to oppose Ravana's flight but was killed by him, fell here.

Rekapalle is still important as the chief village of the most considerable of the inferior proprietors of this part of the country. The Rekapalle estate formed only a part of the large possessions of the Ashwa Raos of Palavancha and Bhadrachalam referred to in the account of the latter place above and it was leased in 1574 to a family of Korukonda (in Rajahmundry taluk) who enjoyed it for nearly two and a half centuries. In 1814 the then holder was murdered by his four diwans, who seem to have enjoyed the estate thereafter either jointly or successively. Three of the four having died, the survivor Venkayya, became for a time the sole proprietor, but in 1857 he was compelled to hand over a portion of the estate, then known as the Marrigudem taluk, to one Rajaji, the son of one of his deceased accomplices. Rajaji miscondacted himself, and his share was given over to the Bhadrachalam zamindar's direct control by the Central Provinces Government in 1862. The present proprietor of Rekapalle is the son of Venkayya. The relations of the inferior to the superior proprietors in this taluk are referred to in Chapter XI. Rekapalle was formerly the head-quarters of a taluk which comprised that part of the Bhadrachalam taluk which lies to the east of a line running due north from a point a little to the east of Gauridévipéta.

This country joined in the Rampa rebellion of 1879, and at one time gave a great deal of trouble to the authorities. The causes of the rising were quite different from those which operated in Rampa. Under the Central Provinces administration *pôdu* cultivation had been almost unrestricted, and the assessment on it had been only four annas an axe. The Madras Government almost trebled the assessment, excluded the cultivators from certain tracts and levied a tax on the felling of certain species of reserved trees. These new taxes and restrictions were considered a grievance, and it was for this reason that the Rampa leaders found adherents in the Rekapalle country. On the tenth of July some Rampa insurgents under Ambul Reddi, aided by a number of Rekapalle people, attacked the Vaddigudem police-station. They were driven back, and a party of armed police was directed to proceed up to the river from Rajahmundry in a steamer and launch. The steamer which was without a guard or arms, incautiously went on ahead, was attacked a little above the gorge, and was taken by the insurgents. A

force of 125 sepoy was then sent up the river, the Gôdâvari and Saveri were patrolled by steamers and posts were established along their banks. By September the people had resumed their ordinary occupations and quiet was restored. The Rékapalle country was again disturbed by an incursion of Tammam Dora in October 1880. He looted a few defenceless villages, but his stay in this quarter did not last long.

CHAP XV  
BHADRÁ  
CHALAM

**Srī Rāmagiri** ( holy Rama's hill ) lies forty-four miles south by east of Bhadrāchalam. It is supposed to have been here that the bird Jatayu, who had tried to hinder Rāvana's abduction of Sita but been mortally wounded in the attempt, told the news of the abduction with his dying breath to Rāma as he passed that way. The grateful Rāma performed the funeral rites of the faithful bird at Srī Rāmagiri. The god is known as Kulasa ( ' the joyful ' ) Rama because he here had news of his lost wife, while the Rama at Parnasala is Sôka ( ' the sorrowful ' ), because his bereavement occurred there. The temple is supported by the zamindar of Rékapalle, who devotes to its maintenance the net income derived from the village of Kunnavaram which ordinarily amounts to about Rs. 800 a year.

The neighbouring hill called Vali Sugriva is so named from the legend that it was there that Rāma obtained further news of Sita from Sugriva, the brother of Vali and king of the monkeys.

---

## CHÓDAVARAM DIVISION

---

THE Chódavaram division comprises most of what was in former times known as 'the Rampa country,' from the village of that name which stands just north of Chódavaram village. Its history is sketched in the account of Rampa below. Almost all the division is occupied by the Eastern Gháts, and four-fifths of it consists of forest. The density of the population is as low as 32 persons to the square mile. There is only one metalled road in the division, namely that from the headquarters to Rajahmundry, but the road from the former to Devipatam is partially maintained.

Only one village in the division is on ryotwari tenure, four are held as mokhásas direct from Government, 50 belong to zamindars, and the rest some 300 in number, consists of hill muttas held on the *kával* tenure referred to in Chapter XI. The zamindari villages are said to have belonged long ago to some Reddi chiefs called the Reddi Rázus, and to have been sold by them, apparently before the permanent settlement of 1802-03 to various lowland zamindars. At present 20 villages belong to the Pólavaram estate, four to Pithápuraṁ, and two to Gutala, while the independent estates of Dandangī and Toyyeru and the disputed mokhasa estate of Kondamodalu contain respectively twelve, eight and four villages. The hill muttas are 24 in number and often have a separate history of their own. A brief description of them will be found below.

As there is only one Government village in the division, the ordinary statistics of soils and cultivation are not available. The chief crops are said to be paddy, pulses, ragi, cambu and maize. In the hills, *podu* cultivation is the rule.

**Bandapalli.** Four miles east-north-east of Chódavaram. Population 223. It is the head village of a hill mutta comprising thirteen villages. In the *fituri* of 1840 the then muttadar and his eldest son took a prominent part among the insurgents. A reward was offered for their capture, but they disappeared and were never seen again. The mansabdar of Rampa, on coming into power in 1848, annexed the mutta on the plea that there were no heirs to it, though the vanished muttadar had left an infant son. In the settlement of 1879, made by Mr Sullivan at the end of the Rampa rebellion, this son was given a sanad and his quit-rent was fixed at Rs 42.

**Birampalli** Head village of a hill mutta of eleven villages. Lies seven miles south-east of Chódavaram, and contains 166 inhabitants. The people of this mutta joined the rebellion of 1879, but they seem to have been driven to this act by the rapacity of a renter to whom the muttadar had sub-let the property. This renter admitted having made Rs 300 a year out of it, though the quit-rent was only Rs 40. At the settlement of 1879 no punishment was imposed upon the people for having joined the late rebellion, as it was conceded that they had some excuse for their action but the muttadar was deposed for maladministration and the property was given to his brother on a quit-rent of Rs 42.

**Boduluru** Head village of a hill mutta of the Rampa country, containing 36 villages and paying a quit-rent of Rs 60. It lies 25 miles north by west of Chódavaram, and contains 90 inhabitants. The muttadar joined in the Rampa rebellion, and had not 'come in' at the time of Mr Sullivan's settlement. His quit-rent was accordingly raised from Rs 40 to Rs 60.

**Bolagonda** Head village of a hill mutta, lies eight miles north east of Chodavaram, population 218. The mansabdar of Rampa obtained possession of this estate in 1867 by means of a forged document purporting to be a deed of resignation by the muttadar. He obtained an income of Rs 306 out of the property, though the quit-rent was only Rs 40. The mutta was restored in 1879 to its former owner, but as he had joined in the *fituri* of 1858, and in the 1879 rebellion had been constantly seen with the notorious Tamman Dora and only escaped arrest owing to the absence of direct evidence to connect him with the atrocities committed, his quit-rent was raised to Rs 60, and the mutta was reduced by granting the village of Vadapalli as a reward to a loyal munsif.

**Chavala** An uninhabited village forty two miles north by west of Chódavaram. Gives its name to a hill mutta, though the chief village of this is now Jájilanka, population 23. The mutta contains 13 villages and pays a quit-rent of Rs 50. The muttadar joined in the Rampa rebellion and had not 'come in' at the time of Mr Sullivan's settlement.

**Chiduguru** Uninhabited village ten miles north-west of Chodavaram, which gives its name to a hill mutta containing 36 villages and paying a quit-rent of Rs 40, the chief village of which is Badagunta. For participation in the rising of 1838-40, the then muttadar was hanged and was succeeded by his brother. In 1872, the Rampa mansabdar took possession of the property on the plea that it had been relinquished

- ✓ by the owner, but in 1879 a descendant of the man who had been hanged was appointed muttadar

**Chódavaram** Head-quarters of the division Population 377 It contains a local fund dispensary (established in 1902), and a police-station garrisoned by a Special Hill Reserve 40 strong. The siege it underwent at the beginning of the 1879 rebellion is briefly described in the account of Rampa below Chódavaram was strongly held by troops throughout the greater part of the rebellion It is situated on one side of an extensive plateau

**Chopakonda** Eight miles south-west of Chódavaram Population 67 Chief place in a hill mutta paying a quit rent of Rs 21 and containing six villages In 1849 the mansabdar of Rampa obtained possession of this on the ground that the muttadar has disappeared, and by a village settlement obtained an income of Rs 116 per annum from it In 1879 the *real muttadar*, who had been alive all the time and was well known to the hill people, was restored

**Dandangi** Twelve miles south-south-west of Chódavaram Population 161 Is the head-quarter village of a zamindari estate consisting of ten villages and paying a peshkash of Rs 565 The estate forms part of a property of 26 villages which was sold by the Reddi Rázus apparently before the permanent settlement to the then zamindar of Nuzvid This passed by sale in later years to the ancestors of the present owners of the Gutála zamindari, and from them (some time before 1855) to the ancestors of the present zamindars of Dandangi

**Dorachintalapalem** Fourteen miles north-east of Chodavaram Population 27 Gives its name to a hill mutta of *fourteen villages the chief place in which is Narasapuram* In 1871 the then muttadar died without legitimate issue and the mansabdar of Rampa at once annexed the property An illegitimate son of the late owner accordingly took a prominent part in the rebellion of 1879, and would not come in at the time of the settlement. The villagers were allowed to elect one of their own number as muttadar, and the quit rent was raised from Rs 50 to Rs 70

**Geddada** Four miles north-west of Chódavaram Population 275 Chief village of a hill mutta of the old Rampa estate, containing nine villages and paying a rent of Rs 21

**Kakuru** Twenty-eight miles north of Chódavaram Population 78 Chief village of a hill mutta of the Rampa country, which pays a quit-rent of Rs 40 and contains eight villages. The muttadar joined in the Rampa rebellion and

had not come in at the time of Mr Sullivan's settlement <sup>c</sup>  
His mutta was settled by Mr Carmichael in 1881

**Kondamodalu** Twenty-seven miles west of Chódavaram <sup>b</sup>  
Population 332 The head-quarters of a mokhása estate at <sup>d</sup>  
the entrance to the gorge on the Gódavari The present  
owner is the grandson of the Linga Reddi who assisted  
Government in the Rampa rebellion

'The Government are aware' wrote Mr Sullivan in 1879  
that Linga Reddi has from the very commencement of the  
rising shown himself a most loyal adherent of the Govern-  
ment Not only has he supplied information and messengers  
but he has brought into the field 50 or 60 well trained  
matchlockmen who have been of great use as scouts and  
envoys With his following he himself on more than one  
occasion accompanied parties of troops and police  
and has done everything he could to render assistance It  
was he who at the commencement of the outbreak surprised  
and brought in Jangam Pulcanta Sambiah

His services were rewarded by the grant as a mokhasa, of  
the village of Ravilanka, which is held on the condition  
that the grantee attends the Collector with peons when  
required to do so<sup>1</sup> and pays a quit rent of Rs 300 Linga  
Reddi had previously in 1858 been granted an allowance of  
Rs 50 a month to compensate him for the withdrawal of his  
right of collecting fees on goods passing up and down the  
Gódavari This grant is conditional on good behaviour  
Linga Reddi had just then earned the gratitude of Govern-  
ment by holding aloof from the *fituri* of his partner Subba  
Reddi<sup>2</sup>

Kondamodalu comprises four villages and pays Rs 110  
annually to the zamúndar of Pólavaram Its precise relations  
with the latter are at present the subject of a law suit

**Kundáda** Eighteen miles north-west by north of Choda-  
varam Population 129 Chief village of a hill mutta  
belonging to the old Rampa estate, containing eight villages  
and paying a quit-rent of Rs. 21 The muttadar was loyal  
during the 1879 rebellion, and his village was plundered and  
burnt by the insurgents

**Marriváda** Three miles east of Chodavaram, which gives  
its name to a hill mutta containing three villages of the old  
Rampa mutta This was granted to the family of one Karam  
Dhulu Dora, who during the first few months of the Rampa  
rebellion was of the greatest service to the authorities 'He

<sup>1</sup> G O No. 2297, Judicial dated 11th November 1881.

<sup>2</sup> G O No 1240 Revenue, dated 11th September 1858

was always with me,' wrote the Sub-Collector, 'giving such assistance as guide, etc., as was in his power' The grant imposed a quit-rent of Rs 15, but not the service conditions attached to most of the other hill muttas This same family were also given, free of rent the mokhasa village of Darimadugula in the Bandapalli mutta, which had formerly been their property but had been taken from them by the mansabdar of Rampa

**Musurumilli** Five miles south of Chódavaram Population 188 Is the chief place in a hill mutta of 18 villages The people of this behaved well during the 1879 rebellion, and it was settled on the old quit-rent of Rs 42

**Nedunúru** An uninhabited village nine miles north-west of Chódavaram which gives its name to a hill mutta of the Rampa country, the chief place in which is Dévarapalli and which pays a quit-rent of Rs 42 and contains eleven villages The muttadar joined in the Rampa rebellion and had not come in at the time of Mr Sullivan's settlement. The mutta was settled in 1886

**Nimmalapálem** Twelve miles north-east of Chódavaram Population 170 A mokhása village which the present holder says was given to his ancestor about 1858 by the muttadar of Geddáda, to whom he was related It was confirmed free of quit-rent in the possession of the holder at the settlement of 1879

**Palem** Six miles south-west of Chódavaram Population 319 Gives its name to a hill mutta containing nine villages and paying a quit-rent of Rs 21 See also Velagapalli

**Pamuleru** Twenty-four miles north by west of Chódavaram Population 15 Gives its name to a hill mutta of the old Rampa country, containing eleven villages and paying a quit-rent of Rs 40, the chief place in which is Kutruvāda. This surrendered to the Rampa mansabdar about 1874, and was sub-let by him to an outsider who was arrested as a ringleader in the rebellion of 1879 In the settlement of that year, however, no one else was willing to take the property and it was given to his son on a quit-rent of Rs 50 The quit-rent was reduced to Rs 40 again about ten years ago

**Péta** Twenty miles south of Chódavaram Population 728 Chief place in a small zamindari estate containing two villages and paying a peshkash of Rs 546 Its history, *mutato nomine*, is precisely the same as that of the Dandangi estate

**Rampa** A little hill village just north of Chódavaram Population 177 Near it, beside a waterfall about 25 feet

high, is a shrine formed of three huge boulders, two of which make a kind of roof, and fitted with a doorway and one side-wall of cut stone. The water of the fall pours continually between the boulders. A rough lingam and other holy emblems have been carved out of the rock.

Rampa was once the chief place in the small mutta of the same name and the residence of its muttadar. This man was chieftain over the whole of the old Rampa country and controlled the other muttadars there, and the rebellion in this which occurred in 1879 and is referred to below was in consequence called 'the Rampa rebellion' <sup>1</sup>

In the earliest records which mention him, the zamindar mansabdar, or rája of Rampa is described as an independent ruler. Mr Grant in his *Political Survey of the Northern Circars* already several times referred to calls him as independent as the rája of Bastar, and the Committee of Circuit writing in 1787, said that, though the zamindari of Rampa belonged to the Circar of Rajahmundry, yet neither the Company nor the Nizam's government received any tribute from it. 'The country' said this body is represented to be extremely mountainous and full of jungle the natives rude and uncultivated, frequently making incursions on the adjacent countries, plundering the villages during the harvest, and driving off the cattle.

At the time of the permanent settlement of 1802-03 the Rampa country was as entirely disregarded as if it had not existed and no settlement of any part of it was made. During the disorders which arose in this district early in the nineteenth century, the mansabdar, Rambhupati Devu descended with an armed force from the hills and took forcible possession of some villages in the plains. He was driven out of these and submitted, offering to acknowledge 'for ever the sovereignty of the Company.'

Then (1813) for the first time a settlement was made with him. The villages he had taken were restored to him as mokhásas and, along with his ancestral possessions in the hills, were confirmed to him free of peshkash on condition that he maintained order in them and prevented incursions into the low country. He appears to have leased his villages to certain subordinate hill chiefs or muttadars whom he

<sup>1</sup> The following give accounts of the early history of Rampa, the causes of the rebellion and its course: G.Os. Judi Nos 1036, dated 5th May 1879 755, dated 3rd April 1879, and 109 dated 16th January 1880. Also the report of Mr D.F. Carmichael when Special Commissioner dated November 1st, 1881, and the Presidency Administration Reports for 1879-80 and 1880-81.

<sup>2</sup> G.O. No 1036 Judicial, dated 5th May 1879 appendix p. 11.

required to keep order in their own charges and from whom he received an income of Rs 8,750 per annum<sup>1</sup> These were the ancestors of the present muttadars

He died in 1835 leaving a daughter and an illegitimate son named Śrī Madhuvati Rāmbhūpati Dévu, and the former was recognized by the muttadars as heiress to the zamindari She declined to marry, declaring her intention of following the example of a former zamindar of the country who had remained unwedded all her life<sup>2</sup> Some time afterwards, however, her chastity was suspected, and she and her brother, both of whom were apparently detested, were driven out of the country

They were maintained by the Government and in 1840 the estate was placed under the Court of Wards Grave disturbances followed (a police force was cut up in 1840)<sup>3</sup> but by 1845 the more turbulent of the muttadars had been apprehended or driven to flight The zamindari surrendered the estate in favour of her illegitimate brother<sup>4</sup>, and in 1848, after protracted negotiations, the muttadars agreed to accept this man as mansabdar and to perform their old police duties, on condition that their united quit-rents should not exceed Rs 1,000 and that the mansabdar should never attempt to exact more from them

The mansabdar agreed to this but quickly broke his promise His confiscations of muttas and oppressions of the people resulted in risings against his authority in 1858 and 1861, and such was the hatred he inspired that when in 1862, he attempted to go and reside in his property an insurrection arose which had to be put down by a strong force of police He continued his depredations, however, and by 1879 had succeeded in getting eight muttas into his own enjoyment, had doubled the quit-rent in several others, and was deriving a considerable revenue from taxes on fuel and grazing and other unauthorized cesses

He succeeded in doing this largely by making it appear, sometimes by disgraceful devices, that all his actions had the sanction of Government, and unfortunately the officers of Government neither adequately realized what was going on in his country nor made sufficient endeavours to protect the muttadars<sup>5</sup> They forgot that the agreement of 1848 was made under the authority of Government, and some of the

muttadars who complained of the mansabdar's exactions were referred to the Civil Courts, though the hill men are notorious for their dread of the plains. The growing discontent among the people was increased by new abkārī regulations preventing the drawing of toddy for domestic purposes and leasing the toddy revenue to renters. These renters demanded that the muttadars should pay fees (called *chigurupannu*) for the right to tap toddy and the mansabdar threatened to levy an additional tax, called *modalupannu*, at the rate of one-half or two-thirds of the *chigurupannu*.

This was the last straw, and was the immediate cause of the 'Rampa rebellion' of 1879. The unpopularity of the police, who had assisted in introducing the new toddy rules and also oppressed the people on their own account, was a contributory cause. The people said that they could not stand all the taxes that were being imposed that three years ago came the *chigurupannu* that this year the mansabdar was demanding *modalupannu* that the constables were extorting fowls, and that as they could not live they might as well kill the constables and die'.<sup>1</sup> The operation of the civil law of the country was an additional grievance. Traders from the low country had taken advantage of the simplicity of the hill men who would much sooner walk into a tiger's den than put in an appearance in the Rajahmundry court, to make unfair contracts with them and then if these were not fulfilled according to the traders' own interpretation to file suits against them, obtain *ex parte* decrees and distrain as much of their property as they could lay hands on. In satisfaction of a debt of Rs 5, cattle and produce worth Rs 100 had been sometimes carried off in this manner, and sometimes it was said the formality of a suit was dispensed with and the trader accompanied by a friend personating an officer of the court, made the distraint without any authority whatever. The hill people laid the blame for all this injustice on Government and Government rules and regulations, and thought that their only remedy lay in rising against the authorities.

On the 9th March 1879 the police inspector of Rampa reported that there was reason to apprehend a disturbance. The Collector had gone to Bhadrachalam so the Sub-Collector and Superintendent of Police set out for the hills with a small body of police. At Gokavaram they met one of the muttadars who was suspected of disaffection, but he tried to allay their suspicions and accompanied them to Chódavaram. The next day, however two policemen were stopped near that place by

<sup>1</sup> G.O. No. 109 Judicial dated 16th January 1880 p. 10

a body of armed men, and news was received of the capture by some insurgents of a body of police near Boduluru. Early on the 13th March a large party of hill men came close to Chódavaram and stated their grievances to the Sub-Collector, who went out unarmed to meet them. He attempted to reassure them and they expressed themselves satisfied, but a few minutes later they called out that they could not trust the Sircar's promises, and began firing on the camp. No particular harm was done by their fire, but the Sub-Collector's party which consisted of 39 police of all ranks with 32 carbines, was now cut off. They had no difficulty in holding out at Chódavaram until reinforcements came up, and by the 17th the force in the village amounted to 149 men. Some 400 officers and men of the 39th Native Infantry had also been landed at Cocanada on the 16th and were moving up the country. Meanwhile however, at Rampa two captured constables were solemnly sacrificed before the chief shrine by the insurgents, the leaders of the latter announced that rebellion was their only hope, and the whole of the Rampa country was speedily ablaze.

In the next month (April) the disturbance spread to the Golconda hills of Vizagapatam, and in July to the Rekapalle country in Bhadrachalam, but the causes of the disaffection there (which are mentioned in the accounts of Rékapalle and Dutchart) were essentially different from those operating in Rampa itself.

The disturbed area now comprised over 5,000 square miles of wooded and hilly country. The operations of the troops were much hampered by the nature of the ground, and the malcontents took advantage of their superior knowledge of the country to maintain a harassing guerilla warfare avoiding all direct encounters with the troops, but attacking isolated police-stations and burning or looting the villages of those who assisted the authorities. Troops were hastened up to the country, and by the end of 1879 the Government forces included, besides several hundred police drafted from neighbouring districts, as many as six regiments of Madras Infantry, two companies of Sappers and Miners, and a squadron of cavalry and a wing of infantry from the Hyderabad Contingent.

The chief leaders of the insurgents were four notorious characters named Chandrayya, Sirdar Jangam Pulicánta Sambayya, Tamman Dora, and Ambul Reddi of Boduluru. The second of these was arrested as early as April 29th, 1879. Chandrayya, however, scored many successes in the

Yellavaram division at the beginning of May, and succeeded in burning Addatigela police-station. He was nearly captured in the middle of that month, but in June he shut up a party of police under a European officer for some days in Addatigela. The spread of the disaffection to Rekapalle and Dutchart and the fear that the hill tribes of Polavaram division might join the insurgents led to strenuous efforts on the part of the authorities, and troops were moved up from all sides. The northern and eastern frontiers of the Rampa country were occupied by strong detachments of sepoy and military posts were established along the banks of the Godavari and Saveri. At the same time Mr Sullivan, First Member of the Board of Revenue, was appointed (in July 1879) to visit the district and ascertain the real causes of the trouble and suggest remedies for it. The steps he took which included the deposition of the mansabdar and a promise that the muttadars should thenceforth deal directly with Government, did much to allay the excitement and before the end of August 1879 as many as 70 of Chandrayya's men had been captured, and Rampa was comparatively quiet.

Rekapalle was also pacified about the same time, and the apprehended rising in Polavaram did not take place. The remaining rebels were now driven north to the hills of Golconda and Jeypore. Ambul Reddi was captured in November 1879 and Chandrayya was killed in February 1880. Their removal broke the back of the trouble. Disturbances went on in a desultory fashion in the Vizagapatam district and in October 1880 Tamman Dora made a brief incursion into that part of the country. But by November 1880 quiet was finally and everywhere restored.

The most deadly foe of the police and troops engaged in suppressing the outbreak had been the malaria which infests this part of the country. At the end of the March 1880, out of 2,400 men employed, no less than 590 were on the sick list. Many deaths occurred, and in many other cases those attacked were months before they completely recovered.

The mansabdar of Rampa, as has been said, was deposed. As the Government order put it 'for gross misconduct and oppression the Government have cancelled absolutely and forever the mansabdari tenure of Rampa and the mokhasa tenure of the villages of the plain'. The mutta held by the mansabdar was also cancelled, and he himself was detained as a State prisoner at Berhampore. Most of the muttadars were either reappointed or replaced and their position was defined. As early as September 1879 Mr Sullivan had held a durbar at

which the new sanads were distributed With four exceptions, the settlement was made with the muttadar actually in undisputed possession or, where the mutta had been annexed by the mansabdar, with the heir of the former muttadar In arranging the terms of the tenure of each mutta, the loyalty or disloyalty of its owner in the recent disturbances was considered and the quit-rent was raised or reduced in accordance therewith Generally, however, the muttas were granted on the same terms as in 1848 The sanads contained two conditions, firstly, that a stipulated annual quit-rent, including an abkari tax and a local fund cess should be paid annually to Government and secondly, that the muttadar should conduct himself loyally and peaceably, and should give every assistance to the Government in maintaining quiet and order A warning was added that if the muttadar failed in his duties his mutta was liable to be resumed The decision of Government as to the rights of the muttadars over the forests will be found in Chapter V

The Rampa mutta had always been in the personal enjoyment of the mansabdar, and was resumed by Government It had formerly consisted of thirteen villages Ten of these, with the title of muttadar of Rampa, were given to the munsif of Chódavaram who had given the greatest assistance to Government throughout the outbreak had been their channel of communication with the muttadars had obtained information regarding the movements of the rebels, and had got together a body of armed men to co-operate with the police and the troops The grant was made free of quit-rent, and was conditional on the grantee's being of good behaviour, paying the local fund cess, and presenting to the Collector every year, in token of his allegiance a bow and three arrows The other three villages of the Rampa mutta were given to the muttadar of Marrivada, who had also shown his loyalty during the rebellion

**Sirigundalapadu** One mile south-east of Chódavaram Population 75 The village used to belong to the Bandapalli mutta, but at the settlement of 1879 it was given at the request of the muttadar to a relative of his, who was going to assist him in the management of the mutta, and who had shown himself loyal in the recent rebellion It pays no quit-rent

**Tádapelli** Fourteen miles north-west by north of Chódavaram Population 466 Chief village of a hill mutta containing nine villages The quit-rent fixed in 1848 was Rs 40, but it was illegally raised by the mansabdar to Rs 100 in 1862 The muttadar did not take part in the insurrection of 1879

but many of his people did, and he himself not only assisted the insurgents with supplies but also concealed himself from the officers of Government and gave them no help whatever. In consideration of the fact however that his mutta is an isolated and rugged tract, right in the path taken by the rebels in their raids, it was considered at the settlement of 1879 that his conduct was more due to fear of the rebels than disloyalty to Government, and his quit-rent was only raised to Rs 63.

**Tunnuru** Ten miles north-west of Chodavaram. Population 80. Gives its name to a hill mutta containing 16 villages and paying a quit-rent of Rs 35. This was returned as deserted at the settlement of Rampa in 1848 but by 1879 it had been reoccupied, and a sanad was accordingly given to a descendant of a former muttadar.

**Vádapalli** Twelve miles south-west of Chódavaram. Population 193. It was given to an ancestor of the present holder by Government in recognition of his services in the Rampa rebellion, on a quit-rent of Rs 15.

**Velagapalli** Eight miles south-south-west of Chodavaram. Population 50. The chief place in a mutta containing six villages and paying a quit-rent of Rs 21. In 1848 it also included the Pálem mutta, but at the settlement of 1879 it was found that these had been divided, and separate sanads were accordingly given to the respective owners in that year.

**Valamuru** Twenty miles west north-west of Chódavaram. Population 35. Gives its name to a mutta containing 22 villages and paying a quit rent of Rs 42. This was one of the old Rampa muttas, but behaved well in the 1879 rebellion. At the settlement of that year there was a dispute about the succession which is described in Mr Sullivan's report.

**Vemulakonda** Ten miles north-west of Chodavaram. Population 95. Chief place in a mutta containing ten villages and paying a quit-rent of Rs 26. The then muttadar joined in the rebellion of 1858, but the people took no part in the rising of 1879.

---

## PÓLAVARAM DIVISION

THE Pólavaram division is the south-westernmost portion of the Godavari Agency, and is the only part of the district which lies on the right bank of the river. The density of its population (103 to the square mile) is far above that of any of the other agency tracts. At the permanent settlement of 1802-03 it was all included in the Polavaram estate. At present only 24 of its villages are zamindari land, of which twelve belong to the so-called Polavaram and Pattisam estates which are really one property in the possession of the present Pólavaram proprietor, five belong to the Gútála estate and four to the estate of Gangólu, and one village belongs to each of the muttas of Bayyanagudem, Billumilli and Jangareddigudem, which three form one estate. The fortunes of these various properties are referred to below.

Pólavaram is more fertile and more civilized than the other parts of the Agency. On the west and south it is as flat as the adjacent Yernagudem taluk, though more covered with jungle. It possesses no industries worth mention. The attempts made to discover coal at Bedadanuru, the mica and plumbago of the division, and the chances of finding gold in its south-west corner, are referred to in Chapter I.

The Pattisam and Táduvayi temples are well known in the surrounding country.

**Gangólu.** Eight miles west-south-west of Pólavaram. Population 1,784. Its hamlet Hukumpéta is the head-quarters of a zamindari which was acquired from the Gutála estate by purchase about 40 years ago, and is still held by the descendants of the purchasers. It comprises four villages and pays a peshkash of Rs. 1,240.

**Gútála.** Five miles south of Pólavaram. Population 3,300. Contains a vernacular lower secondary school for boys and a Sanskrit school. It was once the chief place of one of the 'pergunnas' of the ancient Polavaram zamindari, and its history is sketched in the account of this latter below. In the circumstances there narrated, it was put up to auction in 1810. In 1812 and 1813 it was sold for arrears of revenue, and in 1827 it passed by private sale to one Maniyam Venkataratnam, an ancestor of the present holder. Since then various purchases and sales have much modified the extent of the

estate The most important of these were the purchase of 74 hamlets of the old Nágavaram mutta and the sale of the Gangólu mutta some 40 years ago The estate now comprises five villages in the Pólavaram division (including Nágavaram and its hamlets) and five villages elsewhere It pays a peshkash of Rs 6 721

**Jangareddigudem** Thirty miles south-west of Pólavaram Population 1,918 Head-quarters of a small estate consisting of this village, Billumilli and Bayyanagudem and paying a peshkash of Rs 3,008 In 1832 Jangareddigudem was subdivided from the Polavaram estate in circumstances referred to in the account of that property below It was subsequently bought (along with the other two villages) by the grandfather of the present holder some 50 years ago

**Pata Pattisam** A hamlet of this, called Pattisam Nidhi forms a picturesque and rocky island in the Gódam three miles south of Pólavaram The population of the whole village is 2,002 It is called Pata (old) Pattisam to distinguish it from Kotta (new) Pattisam a hamlet of Gutala A division of the old Pólavaram estate, containing five villages and paying a peshkash of Rs 5 209 is called the Pattisam division but this was never held separately from Polavaram proper

The village is the scene of a well attended festival at Sivaratri The local *sthalá puranam* says that the Pattisam hill went to the Himalayas to attend a conference of mountains, but not being shown proper consideration left the others and went and did penance by itself By means of this penance it induced the Siva of the Himalay to leave that range and come to Pattisam, where he now resides in the Virabhadra temple This temple also contains two stone images of women, called Aniswari and Puniswari one of whom is represented as being in childbed These are much worshipped by childless women desirous of offspring The suppliant places her foot on a platform in front of the figures, and vows that if a child like a pearl or like coral is born to her, she will present a pearl or a piece of coral to the images In another part of the same temple are figures of Durga and Mahishasuramardhani the form adopted by the goddess Parvati when she killed the demon Mahishasura Sheep and fowls are sacrificed before these idols though they are inside the precincts of the temple The spilling of blood is not as a rule permitted inside Brahmanical shrines The Virabhadra temple has two villages attached to it which bring in an annual income of about Rs 2,000

Another sacred place on the Pattisam island is the Bhadrakālīgundam, a pit in the bed of the river which is a favourite bathing-place. The Mahānandisvaram temple on another small island four miles up the river is also fairly well known. It is supposed to be the residence of the bull (*nandi*) which belongs to the Pattisam temple. It has one *agradham* village as an endowment, and this brings in Rs 800 a year. On the island is a cave which is popularly supposed to be the entrance of an underground passage to Benares.

**Pólavaram** Head-quarters of the Agency Deputy Collector (who, however, is temporarily located at Rajahmundry) and the deputy tahsildar. Population 4 455. It also contains the office of a sub-registrar, a local fund dispensary (established by Government in 1880) a police-station a travellers' bungalow a Government girls' school and an English lower secondary school for boys. It was formerly the chief place in the important zamindari of the same name, which formerly embraced the whole of this division and much of Yernagudem and Rajahmundry taluks, but now comprises only twelve villages paying a peshkash of Rs 6,713.

This estate was long under the independent rule of an ancient Hindu family who derived their authority from the Gajapati kings of Orissa and are said to have been descended from that line. Little is known of the estate previous to the British occupation of the country but the names of three of its zamindars Venkatapati, Jagannatha, and Venkatarama, have been preserved. It was then divided into the three estates of Pólavaram, Gútála and Kottapalli, and subordinate to it was the small hill zamindari of Nagavaram.

In 1780 the zamindar Lakshminaráyana Devu, died leaving three sons named Mangapati Devu Narasimha Devu and Vijayagópála Devu, of whom the last was the only son of his second wife. Mangapati was the eldest of the three and succeeded to the zamindari. In 1781 Kottapalli, which had been temporarily in charge of another holder was restored to the estate, and Mangapati was thus in possession of all three of the subdivisions of the property. As he was a minor, his dewan managed the estate for him. This man was the brother of Vijayagópála's mother and he induced the Chief at Masulipatam to recommend (1782) that the estate should be divided into three so as to make a provision for each of the three brothers. This was done, and Pólavaram fell to Mangapati, Gútála to Vijayagópála and Kottapalli to Narasimha.

In 1785 Dasu Reddi the zamindar of Nagavaram pretending that Vijayagópála's diwan was not managing the Gutála estate properly, captured that town and took the young Raja and his mother prisoners. He was perhaps egged on to do this by Mangapati between whom and Vijayagópála's mother there was no love lost. A force of seven companies of sepoy's marched up to liberate the prisoners and restore order. The Nagavaram zamindar then moved his prisoners to his own estate and the English force accordingly marched as far as Anintapalli. The zamindar then returned to Gutála and the English force supposing he would release the prisoners, retired. He still however refused to do so and Gutála was accordingly captured. Two sepoy's were wounded and about eighty peons killed and wounded on both sides during the attack. Dasu Reddi was sent to Masulipatam and Vijayagópála was restored to Gutála.

Similar disturbances took place in 1786-87, when the hill people who were mostly adherents of Dasu Reddi's were driven out of the Company's territory by a detachment of sepoy's. In 1788 peace was for the time restored and the jealousy between the branches of the Polavarum family appeased by placing the whole of the estate under one diwán.

This diwán managed the property efficiently till his death in 1790. A successor was then appointed with the apparent consent of the three brothers. The mother of Vijayagópála refused however to acquiesce in the new arrangement and made herself supreme in Gutála. The Company's troops marched up to Gutála to bring her to order and when they arrived she was discovered with her son in a room in the palace in which were two large open vessels of gunpowder. She threatened that if she was touched she would destroy herself and all that were near and the Company's officer prudently retired. The lady was ultimately pacified and surrendered quietly. She was taken to Masulipatam. Vijayagópála was detained at Rajahmundry and Mangapati was recognized as zamindar of the united estates of Gutála and Pólavaram. Narasimha remained in charge of Kottapalli.

Thus far the disturbances in the estate had been due to private family feuds rather than to disloyalty to Government. The firmer revenue administration of the new Collectors appointed in 1794 however caused a real rebellion of the whole family. Mangapati gave a great deal of trouble to the authorities failing to pay his peshkash and withholding the accounts which were necessary to ascertain how far he had suffered from the recent famine and what remissions should be granted him on that account. So obstinate was he, that the

Board of Revenue directed that he should be taken prisoner. He was accordingly seized and confined and his estate attached, but he was afterwards liberated on his agreeing to discharge the arrears in two years, to give security for the current revenue as it fell due, and to make an immediate payment of sixteen thousand pagodas.

At this juncture Vijayagópala escaped from Rajahmundry and took refuge with Linga Reddi, a hill chief whose estate lay on the east bank of the Godavari above Pólavaram. He was induced by his host and a fugitive revenue defaulter (who had plundered Undi in 1798) to join them in a rebellion, and their combined parties commenced a *jituri* by plundering two villages in the Pólavaram estate.

His brother's revolt encouraged Mangapatí to give further trouble about his revenue. He claimed indulgence, which was refused. He promised to pay but still delayed. His conduct became refractory and turbulent, and he made an exorbitant claim for a remission of over fifty thousand pagodas, and showed that he was prepared to back this up by force. Negotiations ensued while both the zamindar and the Government collected their forces for the expected struggle. The zamindar's demand was finally refused, and a military detachment moved rapidly up the country and captured Polavaram. The zamindar however escaped, and the principal object of the officer in command who had hoped to end the affair by seizing his person, was frustrated. A reward was offered for his apprehension and the country was placed under martial law. Mangapatí first fled to the Nizam's Dominions, but returned when the coast was clear. A carefully planned attempt to capture him at Siruvaka (21 miles north of Polavaram) was unsuccessful, but he fled and was apparently never heard of again. It is supposed he took refuge in the Rampa country.

Meanwhile the outbreak started by Linga Reddi and Vijayagópala had been joined by the Rampa people, and sepoys had to be stationed both at Kottapalli and Indukurpeta to keep them in check. In August 1800 they attacked Indukurpeta, from which they were easily beaten back, and three days later a band of insurgents advanced as far as Purushóttapatnam opposite Pólavaram, and, within sight of the troops stationed there, seized the boats on that side of the river so as to cut off communication. Vijayagópala, whose heart had never apparently been in the rebellion, however surrendered, Narasimha, the zamindar of Kottapalli, who had also joined in the outbreak, was captured, and peace was gradually restored. The Polavaram estate was given

to a cousin named Lakshminarayana Devu, with whom the permanent settlement was made<sup>1</sup>

Since that time subdivisions and revenue sales have played havoc with this ancient property. The first alteration in its limits occurred in 1808 when in consequence of the accrual of large arrears of revenue it was divided into the three muttas of Gutala, Polavaram and Kottipalli and the last of these (comprising 39 villages) was sold in auction. Gutala and Polavaram remained under the old family, but next year the zamindar (Narasimha Devu) broke into rebellion and they were both put up to auction and the ancient line of the Polavaram zamindars came to an end.

The Polavaram mutta of portions of which the present Polavaram is made up was purchased at this sale by one Bavayamma. In 1812 it was sold again for arrears and was purchased by Babu Bilendra Razu and in the following year it was sold yet once more and was bought by Kochirli Kota Jaggayya an ancestor of the present zamindar. On his death in 1832, the estate was subdivided by Government and given to different members of the family and the only parts of it which remained to Ramchandra Venkatakrishna Rao the son of Jaggayya and the grandfathers of the present zamindar, were the two properties of Polavaram and Pattusam which (with the addition of the Villamullipidu estate purchased by the proprietrix who held the property from 1858 to 1888) form the present zamindari. Of the other portions which were subdivided off in 1832 the only village which has not since been purchased by Government is the Jingareddigudem already referred to above. The Polavaram estate was under the Court of Wards in the years 1832-35 1846-54 and 1856-58.

Polavaram village contains some tombs which are locally stated to be those of European soldiers who fell in the *fituri* of Mangapati Devu at the end of the eighteenth century. They bear no inscriptions. Another grim relic of the old disorders in these parts which existed here till recently was the gallows on which Subba Reddi and Kommi Reddi, the ringleaders of the *fituri* of 1858, were hanged. This was carried away by the floods of 1900.

**Taduvayi.** Thirty-seven miles west by south of Polavaram. Population 1,627. It is well known in this part of the country for its Siva temple, to which many pilgrims go at Sivaratri. The village contains a travellers' bungalow.

<sup>1</sup> This account of these disturbances has been abridged from Mr Morris' description in the original *District Manual*. The authorities on which he relied which consist of MS. official records and printed reports, are quoted by him on p. 275 thereof.

### YELLAVARAM DIVISION

---

THE Yellavaram division of the Agency occupies the north-easternmost corner of the district. The whole of it is hilly though considerable areas of level land lie among the hills, and except for fifteen villages adjoining the plains, is covered by forest, it is also very malarious, the soil is poor and in the summer months water is always scarce, there are only 24 miles of metalled road in the whole of it, and the inhabitants are mostly Koyas and hill Reddis. Consequently it is very backward and sparsely populated, and contains only 31 persons to the square mile. Some little irrigation is provided by a few tanks. The chief cereals are paddy, pulses and oil-seeds, but the hill men depend mostly on the produce of the tamarind trees, which grow to a great size. There are no industries worthy of the name in the division, except a very little basket making. There are five weekly markets.

Large areas which formerly belonged to the old Jaddangi estate are now Government land but considerable tracts are held by the various hill muttadars referred to below. Round Jaddangi considerable tracts of forest have been reserved and the Forest department has opened up these with roads.

**Addangela** Head-quarters of the division. Population 459. Contains a police-station, a travellers bungalow, a local fund dispensary (established 1901) and one of the four weekly markets of the division. It is an insignificant place and little suited to be the head-quarters of a division being unhealthy and surrounded with jungle.

The village was the scene of some stirring events during the Rampa rebellion referred to in the account of Rampa above. Almost the first act of the insurgent leader Chandrayya was to burn down the police-station there. This occurred at the end of April 1879. The station was rebuilt and re-garrisoned but in June was again attacked by Chandrayya. On the twelfth of that month some police under a European officer were attacked by Chandrayya in this neighbourhood, kept under fire for four and a half hours, and finally driven to take refuge in the station. There they were attacked three days later. They had to unroof the thatched station buildings for fear of fire, a reinforcement of 20 men sent to their rescue was driven back by Chandrayya, and a

sortie of theirs was also repulsed by him. Detachments were then hurried up from various quarters and the station was relieved (without opposition) on the 25th of June

**Anigéru** Two miles north-east of Addatigela. Population 211. Is the chief village of a mutta consisting of six villages and paying a quit-rent of Rs 80. The muttadar's family is descended from the old mansabdar of Jaddingi who (see the account of that place below) was deposed in 1846. His infant son had in later years immense influence with hill people, and at the time of the Rampa rebellion he exerted it entirely in the favour of Government and materially to their advantage. It was decided to reward him by giving him the six villages of this mutta. They had formerly belonged to Dutcharti but the holder of that mutta had not behaved well in the disturbances and deserved no consideration. The grantee was succeeded by his son in 1887 and the latter was followed by his mother, who died in 1904.

**Dutcharti** Ten miles nearly north of Addatigela, population 308. It is the chief village of the hill mutta of the same name which pays a quit-rent of Rs 1200. Till 1881 this was a part of the Golconda taluk of Vizagapatam district. It was originally held on service tenure under the old Golconda zamindar. His estate was sold for arrears and bought in by Government in 1837, and the muttadars under him thus became direct holders under Government on a service tenure.

This seriously lowered their status as they were directly subject to the surveillance of the Collector's native *amin* and several disturbances followed.<sup>1</sup>

At the time of the outbreak of the Rampa rebellion of 1879 in this district the Golconda muttadars had no such grievances against Government as existed in Rampa but they still fretted against the restrictions which had been placed upon their powers and the more daring spirits among them were moved by solicitations from across the border, by a hunger for loot and by a desire to pay off old scores against the police.

The chief of the malcontents was Chekka Venkan Dora, muttadar of Dutcharti whose grandfather had been manager of that mutta and, on the death of his master without issue had obtained a sanad for it himself. The first outbreak was caused by the action of one Dwárabandham Chandrayya, a man of some substance who afterwards became one of the chief leaders of the rebellion. His house was searched,

<sup>1</sup> These are referred to in the account of Golconda taluk in the *Vizagapatam Gazetteer*.

during his absence, by the police in connection with a dacoity. Furious that such a thing should have been done when only his womenfolk were present he collected all the budmashes in the surrounding villages, descended into Dutchart and burnt the police-station of Addatigela. This was at the end of April 1879. Numerous parties of insurgents who were beating up recruits flying for shelter, or levying black-mail now resorted to this country, and though no further open outrages were committed troops had to be sent up into these hills.

Chekka Venkan Dora, muttadar of Dutchart had avoided any overt act of rebellion. But it was the belief of all the officers, civil and military, who served in those hills, that he had encouraged Chandrayya on the understanding that his own villages should be spared from plunder. It was beyond doubt both that his villages were not plundered and that he could, if he liked, have crushed the outbreak there and prevented the destruction of Addatigela. When, therefore, the rebellion was over it was decided to remove Chekka Venkan Dora from his mutta. His brother the present muttadar was appointed in 1881. At the same time the six villages which now constitute the mutta of Anigeru (90) were taken from Dutchart to reward the loyalty of another influential hill chief. The muttas of Dutchart and Guditeru which were thought to be more accessible to the officers of this district were also transferred from the Vizagapatam to the Godavari Agency in the same year<sup>1</sup>.

**Gurtedu** or Guditeru is a village of 300 inhabitants and containing a travellers' bungalow, which gives its name to a mutta in the extreme north-east of the division. Like Dutchart it formed till 1881 a part of the Golconda taluk of the Vizagapatam district. It pays Rs 70 quit-rent. It is quite isolated from the rest of the Yellavaram division by the Dumkonda hill and can only be reached by the Yeduvampula pass through the Vizagapatam district or from Chódavaram via Boduluru. Horses cannot get across this pass, and elephants have to be lightly laden. Along it may be seen the remains of the sangars built by the hill men during the Rampa rebellion.

**Jaddangi** Nine miles east by north of Addatigela, population 537, contains a travellers' bungalow. Was once the head-quarters of a mansab which was formerly held on service.

<sup>1</sup> Notification No. 217 Judicial dated 29th June 1881. For these troubles in Golconda see the minute dated November 1st 1881 of Mr D. F. Carmichael Member of Council who was appointed as Special Commissioner to arrange a settlement.

tenure under the old zamindar of Peddapuram. When that zamindar fell into the hands of Government the muttadar held on the same tenure directly under the new owners. He rebelled in 1845 and the mutta was accordingly resumed. It contained 80 villages.

At Jaddangi is held one of the few markets in Yellavaram. Near the village is a cave containing the image of the well-known Bráhmaṇ saint Mandayya Mihamuni who is supposed by the local people to have lived in the cave. The river Madra is said to have been called after him.

**Kota.** Twelve miles north-north-west of Addatigela. Population 105. Contains a police-station and is the chief village of the hill mutta of the same name but is a petty collection of huts. It is said to have originally formed a part of the Rampa munsabdar's estate under which it was properly held on service tenure. Under the muttadar there are five sub-muttas, namely those of Yerrigondi, Yarlagedda, Pasaraginni, Nulakimaddi and Simageddi. Of these the first named pays a *kattubadi* to the muttadar of Rs. 80 a year and the others each Rs. 50. The muttadar himself pays Government an annual out-rent of Rs. 210.

The police-station seems to have been taken by the insurgents at the commencement of the Rampa rebellion and an attempt made on March 17th 1879 by a force of police to reach and hold it was unsuccessful. It was however soon re-occupied and resisted several attacks during April. It is now the most unpopular station in the district.

**Mohanapuram.** Seven miles north-west of Addatigela. Population 138. It is the chief village of a hill mutta which was formerly under the munsabdar of Rampa and since 1879 has been held on service tenure direct from Government. The quit-rent is Rs. 25.

**Nellipudi.** Twenty miles south-south-west of Addatigela. Population 835. Contains a travellers' bungalow and a weekly market. The village is held on mokhasa tenure. It was given to the father of the late mokhasadar, who died in 1906, in recognition of his services to Government. The village was formerly part of the Rampa munsabdar's property. The quit-rent is Rs. 350.

**Pandrapóle.** Eight miles north-west of Addatigela. Population 87. Another of the old Rampa muttas. The father of the present muttadar, who is also the muttadar of Kóta, was confirmed in possession in 1879 on a quit-rent of Rs. 70.

**Ramavaram.** Seventeen miles north-west of Addatigela and included in the Kóta mutta. Contains a travellers' bungalow. On a hill near this village is a small cave in which are four

' idols From the rock above hang stalactites from which water drips on to the figures below The temple of Visvanátha in this village is worshipped by the Saivites in the neighbouring hills every Sivarátri The god is considered especially potent in granting prayers for children

**Virabhadrapuram** Three and a half miles east by south of Addatigela, population 225 On the Devudu Pinjari hill close by is a small cave in which is an idol called Virabhadrasvami This is worshipped every Sivarátri by the neighbouring hill people
